RESIDENTIAL - Diesel Particulate Matter

Parameter	Abbr.	3rd Tri	0<2	2<16	16<30
Daily Breathing Rate (mg/kg/day)[1]	DBR	361	1,090	572	261
Inhalation Absorption Factor (unitless)	A	1.0	1.0	1.0	1.0
Exposure Frequency (unitless)[2]	EF	0.96	0.96	0.96	0.96
Conversion Factor (ug to mg, L to m^3)	CF	1.00E-06	1.00E-06	1.00E-06	1.00E-06
Age Sensitivity Factor (unitless)	ASF	10	10	3	1
Exposure Duration (years)	ED	0.25	2.00	1.12	0.00
Averaging Time for Lifetime (years)	AT	70.0	70.0	70.0	70.0
Fraction of Time at Home (unitless)[3]	FAH	1.00	1.00	1.00	0.73
Worker Adjustment Factor (unitless)	WAF	4.2	4.2	4.2	4.2
Cancer Conversion Factor (unitless)	CCF	1.00E+06	1.00E+06	1.00E+06	1.00E+06
Cancer Potency Factor (mg/kg/day)$^{-1,3}$	CPF	1.1	1.1	1.1	1.1

1. 95th percentile DBR for 3rd Tri & 0<2, 80th percentile for other age groups, consistent with BAAQMD Guidance.
2. Based on 350 days/365 days per year

DOSE: CONC x DBR x A x EF x CF
CANCER RISK: Dose x CPF x ASF x ED/AT x FAH x CCF

WORKER - Diesel Particulate Matter

Parameter	Abbr.	16<30
Daily Breathing Rate (mg/kg/day)	DBR	230
Inhalation Absorption Factor (unitless)	A	1
Exposure Frequency (unitless)	EF	0.68
Conversion Factor (ug to mg, L to m^3)	CF	1.00E-06
Age Sensitivity Factor (unitless)	ASF	1
Exposure Duration (years)	ED	3.37
Averaging Time for Lifetime (years)	AT	70
Fraction of Time at Home (unitless)	FAH	1
Worker Adjustment Factor (unitless)	WAF	4.2
Cancer Conversion Factor (unitless)	CCF	1.00E+06
Cancer Potency Factor (mg/kg/day)$^{-1}$	CPF	1.1

1. 95th percentile for 16<30, moderate intensity .
2. Based on 250 days/365 days per year

DOSE: CONC x WAF DBR x A x EF x CF
CANCER RISK: Dose x CPF x ASF x ED/AT x FAH x CCF

Road Dust Emission Factors

Daily Paved Road Dust EF[1]

$$E_{ext} = [\, k\,(sL)^{0.91} \times (W)^{1.02} \,]$$

EF_{paved}	Annual or other long-term average emission factor in the same units as k
k	particle size multiplier for particle size range and units of interest
sL	road surface silt loading (g/m^2)
W	average weight (tons) of all the vehicles raveling the road (2.4 tons)
P	Number of "wet' days with at least 0.254 (0.01 in) of precipitation during the averaging period
N	Number of days in the averaging period (e.g. 365 for annual, 91 for seasonal, 30 for monthly)

Parameters	**PM10**	**PM2.5**
k $(g/VMT)^2$	0.997898	0.244939
sL (g/m^2)	0.1	0.1
W (tons)	2.4	2.4
EF (g/mi)	3.00E-01	7.36E-02

[redacted]

Daily Unpaved Road Dust EF[1]

$$E.F._{\text{dust},i} = \left(\frac{k(s/12)^1 (S/30)^{0.5}}{(M/0.5)^{0.2}} - C \right)$$

k	particle size multiplier for particle size range and units of interest
s	surface material silt content (%)
M	surface material moisture content (%)
S	mean vehicle speed (mph)
C	emission factor for 1980s vehicle fleet exhaust, brakewear and tire wear

Parameters	**PM10**	**PM2.5**
k $(g/VMT)^2$	816.462	81.6462
s[3]	8.5	8.5
M	0.5	0.5
S	10	10
C	0.213187	0.163292
EF (g/mi)	333.6842	33.22645

*** MODELOPTs: RegDFAULT CONC ELEV FLGPOL URBAN ADJ_U*

*** MODEL SETUP OPTIONS SUMMARY ***

** Model Options Selected:
* Model Uses Regulatory DEFAULT Options
* Model Is Setup For Calculation of Average CONCentration Values.
* NO GAS DEPOSITION Data Provided.
* NO PARTICLE DEPOSITION Data Provided.
* Model Uses NO DRY DEPLETION. DDPLETE = F
* Model Uses NO WET DEPLETION. WETDPLT = F
* Stack-tip Downwash.
* Model Accounts for ELEVated Terrain Effects.
* Use Calms Processing Routine.
* Use Missing Data Processing Routine.
* No Exponential Decay.
* Model Uses URBAN Dispersion Algorithm for the SBL for 68 Source(s),
for Total of 1 Urban Area(s):
Urban Population = 728929.0 ; Urban Roughness Length = 1.000 m
* Urban Roughness Length of 1.0 Meter Used.
* ADJ_U* - Use ADJ_U* option for SBL in AERMET
* CCVR_Sub - Meteorological data includes CCVR substitutions
* TEMP_Sub - Meteorological data includes TEMP substitutions
* Model Accepts FLAGPOLE Receptor . Heights.
* The User Specified a Pollutant Type of: PM_10

**Model Calculates ANNUAL Averages Only

**This Run Includes: 68 Source(s); 4 Source Group(s); and 1075 Receptor(s)

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 66 VOLUME source(s)
and: 2 AREA type source(s)

and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)
and: 0 SWPOINT source(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:
Model Outputs Tables of ANNUAL Averages by Receptor
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 2.40 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.8 MB of RAM.

**Input Runstream File: aermod.inp
**Output Print File: aermod.out

**Detailed Error/Message File: 410 Airport_DPM.err
**File for Summary of Results: 410 Airport_DPM.sum

Section 1.0 Introduction

H. T. Harvey & Associates ecologists prepared this report to support the City of Burlingame's California Environmental Quality Act (CEQA) documentation for the proposed Bay Rise Park Project (project), located at 410 Airport Boulevard, Burlingame, California (Figure 1). This report describes the biological resources present in and adjacent to the proposed project, as well as the potential impacts of the proposed project on biological resources within the site. Where necessary, this report also describes measures necessary to reduce biological resource impacts to less-than-significant levels under CEQA.

1.1 Project Description

1.1.1 Goals and Project Elements

The purpose of the project is to transform the vacant 10.2-acre bayfront parcel into a public nature and recreation park. The project would also restore a natural tidal marsh along this portion of the San Francisco Bay shoreline.

The SPHERE Institute, the project applicant, secured an interim-term lease in October 2019 from the State Lands Commission (SLC) to complete due diligence, design development, community outreach, regulatory agency coordination, and CEQA approval. The project applicant submitted the long-term lease application (for the maximum 49 years) in July 2021.

The project's three main goals are to:

1. Enhance the user experience by creating a dynamic and engaging park that invites a broad range of users to explore, learn, and enjoy; creating access to the bay for people of all communities, age groups, and abilities; establishing safe, legible connections to the San Francisco Bay shoreline and the Bay Trail; and developing flexible indoor and outdoor spaces as a hub for educational opportunities and community events.
2. Increase awareness of climate change and sea level rise by providing interpretive opportunities and programming that allow visitors to explore and learn about sea level rise resiliency and the impact of climate change on native ecosystems; creating biophilic experiences that help foster a sense of connection to the natural environment; and using innovative, sustainable materials and methods, including wildlife-friendly and bird-safe design. The project would also be designed to provide improved stormwater and bay water filtration functions.
3. Restore bayfront habitats by restoring appropriate bayfront native habitats, including tidal salt marsh and marsh-upland ecotone habitats, promoting native vegetation, and controlling non-native species.

Figure 1. Vicinity Map
Bay Rise Park, – Biological Resources Report (4113-02)
December 2024

To achieve these goals, the project's vision is to transform the property into public open space, with a focus on public access to the bay, tidal marsh habitat restoration, and sea level rise resiliency demonstration/education. The overall earthwork concept is to excavate the northern portion of the site and move that excavated soil to create a berm farther south, closer to the roadways. The excavation design grades would be set to convert existing ruderal upland habitat and low-quality seasonal wetland habitat to a high-quality tidal salt marsh ecosystem. An improved Bay Trail segment would be located atop the berm, overlooking the restored tidal marsh. The project would also include an education center building and would program educational events. Interpretive design elements would be installed throughout the park to educate park users about climate change and bay ecology in a manner that allows users of diverse ages, backgrounds, and abilities to engage with the site.

As currently envisioned, and as shown on Figure 2, the site would include the following project elements:

- Restored tidal salt marsh habitat, marsh-upland ecotone, and upland habitats dominated by native plant species
- Improved Bay Trail
- Secondary trails
- Education center building
- Interpretive program
- Coastal flood protection/Sea level rise resiliency demonstration
- Bay Area Water Trail access and recreation (i.e., kitesurfing ramp, and a dual purpose emergency water rescue/kayak ramp)
- Lawn
- Multi-purpose areas
- Trash enclosure
- Fire Department building
- Southern parking lot, adjacent to Airport Boulevard and Bay View Place
- Rock structures within the tidal inlet to create a permeable barrier that would reduce wave propagation into the restored marsh
- Living shoreline intertidal habitat design elements incorporated into rock slope protection at the tidal inlet, emergency water rescue/kayak ramp, and kitesurfing ramp, on rock structures within the tidal inlet, and on northeastern shoreline repair area

DRAWING NAME: \\HTHNAS\Company Share Folder\Work Products\Active Projects\4113, Burlingame Airport Blvd Park\02, Outreach and Design\PSE\WorkDwg\FIGURE\4113-02_BRR Figure 2_20240412.dwg

1.1.2 Proposed Project Conditions

1.1.2.1 Wetland Restoration

The site is located within historical Baylands that were previously filled. The project would remove a portion of this fill and reconnect the excavated area to the bay's tides to restore an approximately 3-acre tidal salt marsh ecosystem. The restored ecosystem would be dominated by native plant species that would consist of approximately 1.5 acres of tidal salt marsh habitat below the current High Tide Line (HTL) and approximately 1.5 acres of associated marsh-upland ecotone habitat (ecotone) above the current HTL.

- Tidal salt marsh refers to the portion of the restored marsh ecosystem that would be flooded and drained by the twice daily high and low tides that would convey saline water to the marsh from the San Francisco Bay through a constructed tidal inlet. Most of the tidal marsh would consist of a relatively flat marsh plain and would be vegetated with native plants adapted to salty soils and regular tidal inundation. The tidal marsh would be located below the current HTL.
- Marsh-upland ecotone habitat refers to the transition zone of vegetation that would be located on the constructed earthen slope situated between the restored tidal marsh at the toe of slope and the upland habitat at the top of slope. This slope would also function as a coastal flood control berm and a new segment of the bay trail would be located at the top of slope. Ecotone vegetation would consist of a diverse transition of plant communities from those that are relatively salt and flood tolerant near the toe of slope/marsh to those that are more drought tolerant toward the top of slope. The proposed tidal marsh ecosystem restoration is consistent with regional bayland planning guidance for this portion of the San Francisco Bay shoreline including: *Baylands Ecosystem Habitat Goals Project* (San Francisco Bay Area Wetlands Ecosystem Goals Project 1999), *Baylands Ecosystem Habitat Goals Project Science Update* (San Francisco Bay Area Wetlands Ecosystem Goals Project 2015), and the *San Francisco Bay Shoreline Adaptation Atlas* (Beagle et al. 2019).

The tidal marsh and ecotone design is modeled after natural San Francisco Bay tidal salt marsh analogues, with the primary analogue consisting of the closest appropriate natural marsh to this site: Laumeister Marsh. Tidal salt marsh habitat would consist of a fully tidal mid- to high-marsh plain dominated by pickleweed (*Salicornia pacifica*) with a lower abundance of a diversity of native tidal salt marsh plant species. Tidal waters would be conveyed to and from the marsh plain on the flood and ebb tides by a dendritic tidal slough channel network connected to the San Francisco Bay via a constructed tidal inlet. The marsh-upland ecotone would support a high diversity of native plant species occurring within sub-shrub and shrub habitat patches in a matrix of alkali meadow habitat. Overall, the habitat improvements would support a high diversity of plants and animals, including insect pollinators.

The existing ruderal habitat and the majority of the low-quality seasonal wetlands would be converted to restored tidal marsh and ecotone via mass grading. The mass grading effort would excavate the existing bay fill to tidal marsh elevations and place that fill landward to construct the ecotone slope up to the new Bay Trail segment. The tidal inlet to the San Francisco Bay would be constructed through the site's existing concrete

rubble shoreline protection to provide full tidal action to the restored tidal marsh. The existing shoreline protection would be left intact adjacent to the tidal inlet to serve as a wave break to protect the restored tidal marsh and the lower boardwalk from wind-wave erosion. The slope leading up from the marsh would be graded at a low, gradual angle (slopes varying from 4:1 to 10:1 [horizontal:vertical]) to restore ecotone habitat. The grading plan for both the restored marsh plain and the ecotone slope would provide the marsh ecosystem with resiliency to sea level rise, so that sea level rise is less likely to drown the vegetated marsh in the future. For example, the marsh plain would be constructed at elevations situated relatively high in the tidal frame and the ecotone would be built with a gradual, gentle slope (not steep) to allow the tidal marsh to adapt to sea level rise. The gradual ecotone slope from the marsh to the trail would provide horizontal space for the marsh to gradually Move upslope as sea level rises (i.e., landward transgression of marsh).

Contaminant testing of soils at the marsh design grade found that certain contaminants exceed Regional Water Quality Control Board (RWQCB) screening criteria for the protection of aquatic animals. Therefore, the project would include over-excavation of contaminated soils and import and backfill of the restored marsh plain with clean soils that meet RWQCB screening criteria for wetland surface material to protect aquatic animals that would utilize the restored marsh. Soil stockpiling will occur at the project site as soon as soil that meets RWQCB screening requirements becomes available from a local borrow site or sites. To avoid impacts to any existing habitat, the soil will be stockpiled in the existing parking lots, which are classified as "Developed/Landscaped" habitat on Figure 3. Obtaining the soil in advance will help ensure that suitable soil is available when needed for the project to stay on schedule and could also help reduce overall environmental impact since the soil could be moved directly from the local borrow site to the project site.

There is also material onsite that contains non-hazardous concentrations of petroleum hydrocarbons and metals which would need to be disposed offsite at a Class II regulated landfill or buried under two feet of clean fill material. A small volume of soil containing hazardous concentrations of lead would need to be disposed of off-site at a Class I regulated landfill (Langan Engineering and Environmental Services, Inc. 2021). Following soil excavation and wetland surface soil import and placement, the restoration work would include intensive revegetation of native plant communities via seeding, planting, and vegetation maintenance during a short-term, three-year plant establishment period.

1.1.2.2 Shoreline Erosion Control and Living Shoreline Elements

Under proposed project conditions, the existing shoreline protection would be breached, allowing tides to inundate the restored tidal marsh excavation area. Waves produced both by moving vessels and wind shear could propagate through the constructed tidal inlet and potentially cause soil erosion in the restored marsh. The project would include several constructed elements to avoid and mitigate the effects of waves, propagating into the site through the approximately 50-foot-wide tidal inlet:

- The orientation of the tidal inlet is to the northeast, to minimize directly coincident waves generated along the longest fetch, which is directly north. Fetch refers to a water surface area or length over

which the wind blows and thereby generates waves. Angling the inlet away from the principal fetch direction serves to prevent the largest potential waves from entering the site.

- Once waves enter the inlet, the tidal inlet's design forces the waves to break and dissipate energy as the slope quickly ascends over a rip-rapped grade transition that curves toward the southeast and narrows before incoming water reaches the constructed marsh and associated channels. The grade transition ensures that waves break while entering the site, thereby dissipating energy through turbulence and other processes.
- The rip-rapped bottom and sides of the inlet also promote drag forces within the incoming flow that reduces wave energy, and a similar effect is added by directing the incoming flow around a bend in the inlet channel prior to it splitting into the marsh channel network and marsh plain areas of the site.
- The meandering of these marsh channels and the marsh vegetation along the channel margins, bounding berms, and marsh plain serve to further reduce the energy of incoming waves by increasing surface roughness and flow complexity.
- Raised topography at the southern portion of the marsh and the construction of a flood control berm and a flood wall at the education center provide a further layer of protection for critical infrastructure elements of the site.

The project would also improve shoreline erosion protection and enhance rocky intertidal habitat along portions of the bay shoreline and the Sanchez Creek bank adjacent to the proposed kitesurfing ramp, tidal inlet, and water rescue/kayak ramp. These shoreline improvements involve removal of existing concrete debris and replacement of this debris with imported hard substrate, placed below the HTL. Construction work in aquatic habitats below the HTL along the bay shoreline (also referred to as in-water work) would be done using sheet pile coffer dams and dewatering to prevent ingress of Bay waters. Living shoreline habitat enhancements would be incorporated into all hard substrate that is placed for erosion protection as follows:

- Living shoreline intertidal habitat design elements incorporated into rock slope protection may include the addition of rugosity to the imported rock and/or concrete to promote colonization by macroalgae and macroinvertebrates. Rugosity refers to small-scale variations in the surfaces of the rock and/or concrete creating a rough, ridged, or wrinkled surface located in the subtidal or low elevation intertidal zones to promote natural establishment of diverse assemblages of macroalgae and macroinvertebrates.
- Rock-crown revegetation with native plants on the upper elevation portions of these rock structures. Rock-crown revegetation refers to incorporation of soil and vegetation into the rock structure interstices above MHW.

1.1.2.3 Operations/Public Access and Education

The project would improve access for the public to experience a wide variety of recreational activities. It would provide amenities for fishing, picnicking, playing lawn games, kitesurfing/windsurfing, kayaking/paddle boarding, jogging, bicycling, birdwatching, and attending educational events.

- **Public Access to Nature**—The project is designed to maximize visual access to the restored tidal marsh habitat and promote nature-based recreation and education. Several elevated site elements (e.g. boardwalks, education center deck, overlook grove, etc.) would provide observation points for birdwatchers, educational groups, and members of the public. The revegetation design is geared to provide the public with opportunities to experience and learn about native plants. The marsh, its associated marsh-upland ecotone, and the upland habitat would all be revegetated with native bay edge species. Planting in areas of high public use, for example around the education center, would be more "formal" but would still only include appropriate native bay edge species. The site would be designed to provide universal access to the education center and all trails and passive recreation areas. In terms of active recreation, both water access ramps would comply with Americans with Disabilities Act recommendations for water access ramps.

- **Education and Interpretive Program**—The project would provide opportunities for schools, non-profit organizations, and the general public to learn about sea level rise, bay ecology, and other relevant topics. The site would include an interpretive program to educate the public on the natural environment and explain the project's nature-based sea level rise adaptation strategy. The exterior portion of the program would focus on experiential and structural elements and may provide a few sign panels. The interior portion would include displays and likely a video/monitor educational component. The park's intentional topographic design would provide a visual example of the process of sea level rise, strategies for adapting shorelines to sea level rise, and would be incorporated into the interpretive program. In addition, educational programming and events would be hosted at the site. These educational programs would be led by teachers or docents and include activities and lectures above and beyond the interpretive program.

- **Bay Trail and Other Pathways**—The project would re-route and improve the Bay Trail, which would run along the elevated ridge of the berm, offering views of the bay and the restored tidal marsh habitat below. The site's education center would provide a stopover with restrooms, a water re-filling station, and other amenities for joggers, walkers, and cyclists. Paths and boardwalks would branch off the Bay Trail to provide access within the park. The parking lot would also improve public access to this section of the Bay Trail. The site's secondary pathways provide direct access to the bay edge, including the upper and lower boardwalks in the northeast corner, and the trail spur on the wave break at the northern edge of the site. Other secondary pathways provide safe access from the sidewalk and southern parking lot to the site's key elements.

- **Water Access**—The project would include two separate access points for the Bay Area Water Trail – at the eastern side for kayaking, fishing, and general Bay access, and on the western side for

kitesurfing and windsurfing access. The water rescue/kayak ramp in the northeast corner of the site, which will be used by the fire department in case a water rescue is needed, will also be accessible to the public for pedestrian and water sport access to the water's edge and will improve access for fishing (a popular activity at the site). The water rescue/kayak ramp would include landings and handrails (at the upper elevations) to allow public access to the Bay, and the kitesurfing ramp would include a lawn lay-down area for setting up equipment. The parking lot would also improve access for these water-based activities.

- **Education Center and Adjacent Eastern Lawn—**
    - The building would include two exhibit galleries, with a dividing operable wall system allowing the galleries to be merged into one larger space. It includes an associated northern and western deck and eastern/southern plazas.
    - The education center galleries would be open to the public 7 days/week from approximately 9am to 5pm.
    - Along the east side of the building, a takeaway café counter would serve coffee, sandwiches, etc. that can be consumed in the park or taken to go. The café would not provide sit-down menu service. It would be open 7 days/week from approximately 8am to 3pm with possible extended summer hours from 7am-3pm.
    - The park restrooms will be on the west side of the building and are accessible from the building's exterior. These exterior park restrooms would open at the same time as the café and stay open until dusk (when the parking lot closes).
    - The building's western deck will also be publicly accessible during park hours.
    - The eastern lawn is located between the education center and Sanchez Creek and would provide room for picnicking, lawn games, and a variety of activities and events.
- **Events**—The project's education center would host educational programs and other events.
    - Events may include the following:
        - Education: school group, community group, speaker series, scientific research
        - Recreation: sports competition, group sports lesson, group kayak outing, nature group outing
        - Performance: music, theater, movie, art
        - Community: farmer's market, food truck hub, craft fair, collectible/antique fair, art/wine festival
        - Private: wedding, birthday party, family reunion, faith-based event (e.g. bar mitzvah)
        - Corporate/Nonprofit/Government: meeting, conference, banquet

- Events may temporarily limit public access to portions of the education center (one or both galleries, the lobby, and/or the interior restrooms) and its associated exterior spaces (northern deck, eastern plaza, and/or eastern lawn). During open hours, the public would always have access to the Bay Trail, western deck, Bay Area Water Trail access points, exterior park restrooms, café counter, parking lot, and western lawn.

- **Parking**—The site would include an entry drive and a one-way parking lot extending from the entry at Airport Boulevard, exiting on Bay View Place. The parking lot would be gated on both sides for security and would be open 7 days/week from dawn to dusk. Parking would remain open to the public during education center events, which would utilize valet/shuttle services.

1.1.2.4 Coastal Flood Protection

As described above, the project will use a portion of the fill excavated in creating the marsh to construct an earthen slope on the southern portion of the site. The earthen slope will be engineered to function as a coastal flood control berm. The elevation of the berm will be coordinated with the San Mateo County Flood and Sea Level Rise Resiliency District (OneShoreline), which is currently developing flood control solutions for the region as a whole. The OneShoreline regional solution will be required to complete the coastal flood protection in the project vicinity, and the project is being engineered to allow for future integration with this regional solution.

1.1.2.5 Views

Views to the bay would be improved, both from Airport Boulevard and from within the park. The existing vegetation along the site's southern perimeter currently obstructs views of the bay from Airport Boulevard. This vegetation would be removed, and strategic view corridors would be provided around the education center to highlight the project's unique bayside setting. Even in locations where the bay is not directly visible, the open unobstructed views through the site would indicate the waterfront (because there is no development bayward of the site, leading to long views across the bay). Within the park, views to the bay would be highlighted from:

- the Bay Trail and overlook grove, both located on the created berm (proposed to be approximately 9-10 feet above current grade),
- the education center, located centrally to provide views of the restored marsh, tidal inlet, and the bay beyond,
- the upper boardwalk in the northeast portion of the site,
- the deck at the top of the water rescue/kayak ramp along Sanchez Creek,
- the kitesurfing ramp, bay overlook/access and seating, and lawn in the northwest corner of the site.

1.1.2.6 Lighting

The project would include outdoor lighting in the landscape and along the exterior of the education center. Lighting goals are based on safety, security, and sensitivity to the adjacent restored habitat:

- Human experience
    - Highlight paths, wayfinding, features and destinations
    - Design for scene experience
    - Provide for safety and security
- Ecology
    - Avoid glare, excess light, and light pollution
    - Select light color to minimize effects on wildlife
    - Reduce high contrast
- Energy efficiency

Automated interior blackout shades would be installed on all windows on the education center's north/northwest and east facades as well as the galleries' south facing clerestory windows. These shades would be programmed to close when the building is not in use and between 10pm and sunrise.

1.1.2.7 Bird-Safe Design

The project would incorporate bird-safe glazing on certain portions of the education center to reduce the frequency of bird collisions with glazed facades. The minimum extent of the proposed bird-safe glazing treatment on the building's facades would include the large glass panels on the north/northwest and east facades. Bird-safe glazing treatments may include fritting, netting, permanent stencils, frosted glass, exterior screens, physical grids placed on the exterior of glazing, or ultraviolet patterns visible to birds. The bird-safe pattern would have vertical elements at least ¼-inch wide at a minimum spacing of four inches, and horizontal elements at least ⅛-inch wide at a minimum spacing of two inches.

1.1.3 Project Construction and Schedule

Project construction is anticipated to occur over the course of three construction phases and would likely require the following equipment (Table 1). The construction timeline and phasing of elements is subject to change. Construction will occur only during daylight hours.

Table 1. Project Construction Schedule and Equipment

Phase	Equipment Type	Number/Day	Hours/day
Phase 0 - Stockpile Soil	Rubber Tired Dozers	1	8
	Highway Dump Trucks	10	6

Phase	Equipment Type	Number/Day	Hours/day
Phase 1a - Demolition/Site Preparation	Concrete/Industrial Saws	1	8
	Tractors/Loaders/Backhoes	1	8
	Dewatering Pump	1	8
	Pile Hydraulic Vibrodriver with Hammer Rig	1	8
	Gradall Forklift	1	8
	Highway/Flatbed Trucks	4	8
	Rubber Tired Dozers	2	8
Phase 1b - Grading/Excavation	Excavators	1	8
	Graders	2	8
	Rubber Tired Dozers	2	8
	Sheepsfoot Soil Compactor	1	8
	Box/Straight-Bladed Earth Moving Equipment, 1140 hours (or Articulated Dump Trucks)	1	8
	Tractors/Loaders/Backhoes	1	8
	Highway Dump Trucks	10	6
	Water Truck	1	2
	Street Sweepers	1	8
	Surfacing Equipment	2	8
Phase 1c - Trenching/Utilities	Tractor/Loader/Backhoe	2	8
	Excavators	1	8
	Trenchers	1	8
	Highway/Flatbed Trucks	2	6
	Highway Dump Trucks	2	6
Phase 1d - Specialty - Water Access Ramp	Concrete Truck	2	8
	Pumps	1	8
	Excavators	2	8
	Pile Hydraulic Vibrodriver with Hammer Rig	1	8
	Gradall Forklift	1	8
	Cranes	1	7
	Tractors/Loaders/Backhoes	2	8
	Surfacing Equipment	1	8
Phase 2a - Grading/Excavation	Excavators	1	8
	Graders	2	8
	Rubber Tired Dozers	2	8
	Sheepsfoot Soil Compactor	1	8
	Tractors/Loaders/Backhoes	3	8
	Highway Dump Trucks	30	8

Phase	Equipment Type	Number/Day	Hours/day
	Water Truck	1	2
	Dewatering Pump	1	8
Phase 2b - Site - Piled Foundations	Excavators	1	8
	Gradall Forklift	1	8
	Bore/Drill Rigs	1	8
	Concrete Trucks	2	8
	Pumps	1	8
Phase 2c - Building - Foundation	Excavators	1	8
	Bore/Drill Rigs	1	8
	Concrete Trucks	6	8
	Pumps	1	8
Phase 2d - Paving and Sidewalks	Pavers	1	6
	Highway Dump Truck	1	6
	Rollers	2	6
	Concrete Trucks	4	6
	Pumps	1	6
	Grader	1	6
Phase 2e - Site - Electrical and Lighting	Excavators	2	4
	Aerial Lifts	2	8
Phase 2f - Site - Landscaping	Excavators	4	6
	Highway/Flatbed Trucks	4	8
	Water Truck	1	2
Phase 3a - Demolition	Excavators	1	8
	Rubber-Tired Dozers	1	8
	Tractors/Loaders/Backhoes	2	8
	Highway Dump Trucks	4	8
Phase 3b - Paving	Excavators	1	8
	Pavers	1	8
	Rollers	1	8
	Skid Steer Loader	1	8
	Highway/Flatbed Trucks	4	8
Phase 3c - Building - Exterior	Cranes	1	7
	Forklifts	1	8
	Aerial Lifts	2	8
	Generator Sets	1	8
	Tractors/Loaders/Backhoes	1	7

Phase	Equipment Type	Number/Day	Hours/day
	Welders	1	8
	Concrete Trucks	6	8
	Pumps	1	8
	Highway/Flatbed Trucks	2	6
Phase 3d - Building - Interior/Architectural	Air Compressors	1	8
	Aerial Lifts	2	6
	Generator Sets	1	8

The project will require installation of piles to provide a stable foundation for construction of the education center, kitesurfing ramp, upper boardwalk, and water rescue/kayak ramp. A combination of temporary and permanent sheet pile/cut off walls may be required along the edge of the project site to allow for installation of the marsh and water access ramps. Temporary installation of sheet piles as coffer dams will also be required for dewatering and preventing ingress of Bay waters during construction. Vinyl sheet walls will be installed in the flood control berm to prevent seepage. Auger cast piles will be used at the education center; this type of pile does not require pile driving. Vibratory pile driving will be used to the extent feasible to install the steel pipe piles and walls. However, the presence of very dense soils at approximately 43 feet deep will likely require switching to impact pile driving where the soils become too dense for vibratory pile driving. Similarly, the presence of large chunks of concrete along the Bay Edge may require switching to pile driving to install some portion of the walls. Table 2 provides details on pile installation by location.

Table 2. Pile Type by Location

Location	Type of Pile	Approximate Duration	Approximate Pile Quantity*
Sheet pile walls along shoreline	Pile Hydraulic Vibrodriver with Hammer Rig	3 weeks (90% vibratory 10% driving time)	1,500 LF
Vinyl sheet walls in flood control berm	Pile Hydraulic Vibrodriver with Hammer Rig	2 weeks (90% vibratory 10% driving time)	1,050 LF
Water rescue/kayak ramp	Vibrodriven steel pipe piles to extent feasible and impact if necessary	2 weeks (90% vibratory 10% driving time)	20
Kitesurf ramp	Vibrodriven steel pipe piles to extent feasible and impact if necessary	1 week (90% vibratory 10% driving time)	9
Boardwalk/overlook	Vibrodriven steel pipe piles to extent feasible and impact if necessary	1 week (90% vibratory 10% driving time)	3
Education and event center	Auger cast	2 weeks	65

*Exact quantity of piles may change after detailed engineering has been completed

Section 2.0 Methods

2.1 Background Review

Prior to conducting field work, H. T. Harvey & Associates ecologists reviewed maps of the project site; aerial images of the region (Google Inc. 2021); a U.S. Geological Survey (USGS) topographic map; the California Department of Fish and Wildlife's (CDFW's) California Natural Diversity Database (CNDDB) (2023); a 2013 Wetland Delineation Report prepared for the property by Monk & Associates (2013), as well as the 2015 U.S. Army Corps of Engineers (USACE)-verified delineation map (SPN File Number 2013-00355S); and other relevant scientific literature and technical databases. In addition, for plants, we reviewed all species on current California Native Plant Society (CNPS) California Rare Plant Rank (CRPR) 1 - 4 lists occurring in the *San Mateo, California* 7.5-minute USGS quadrangle and surrounding eight quadrangles (*Hunter's Point, San Leandro, Redwood Point, Palo Alto, Half Moon Bay, Woodside, Montara Mountain,* and *San Francisco South*) (CNPS 2024). In addition, we queried the CNDDB (2024) for natural communities of special concern that occur in the project region.

2.2 Field Surveys

Reconnaissance-level field surveys of the project site were conducted by H. T. Harvey & Associates wildlife ecologist Craig Fosdick, M.S, and plant ecologist Jill Pastick, M.S., on May 21 and May 19, 2020, respectively, and by senior wildlife ecologist Kim Briones, M.S., on June 17, 2021. The purpose of these surveys was to document existing biological conditions on the entire project site and to provide a project-specific impact assessment for the proposed residential development project on the 9.4-acre project site and the adjacent open water habitat in the San Francisco Bay and Sanchez Creek. Specifically, surveys were conducted to (1) assess existing biotic habitats and general plant and wildlife communities in the project site, (2) assess the potential for the project to impact special-status species and/or their habitats, and (3) identify potential jurisdictional habitats, such as waters of the U.S./State and riparian habitat. Plant species observed during the reconnaissance survey are listed in Appendix A of this report.

A wetland delineation was conducted by senior plant ecologist Mark Bibbo, M.S., and J. Pastick on January 12, 2021. The purpose of this survey was to confirm that conditions on the site had not changed in the five years since the original Jurisdictional Determination (JD) and verified delineation map was issued for the project site by the San Francisco District of USACE on June 15, 2015 (SPN File Number 2013-00355S). M. Bibbo and J. Pastick conducted a routine wetland delineation to determine the current extent of potentially jurisdictional features on the site. USACE conducted a site visit with H. T. Harvey & Associates on April 13, 2021 to verify the findings of the updated delineation, and is currently processing an updated JD.

A tree inventory and assessment were completed on May 21, 2020 (with a follow-up visit in January 2024) by H. T. Harvey & Associates arborist Ryan Hegstad and restoration ecologist Vicki Chang. R. Hegstad is an International Society of Arboriculture-certified arborist (WE-12542A). All trees with a circumference of 13

inches (Diameter at Breast Height [DBH] of 4 inches) or greater were included in the inventory and assessment. Tasks conducted during the tree inventory and assessment consisted of the following: assessing the historical use, time of development, and approximate time of tree installation at the site; identifying each tree to species (scientific name and common name); assessing the native status of trees; tagging each tree with an identifying number; recording the approximate location of each tree; measuring tree trunk diameter (DBH); determining the protected status of each tree; evaluating tree health and structural conditions; and taking representative photos of the surveyed trees. The results of the tree survey are presented in a preliminary arborist report, included in this report as Appendix B.

A preliminary eelgrass survey and analysis was overseen by Merkel & Associates, Inc. in April and May 2021. These surveys were conducted in conformance with the California Eelgrass Mitigation Policy (CEMP; NMFS 2014) and covered a 45 meter (148 foot) buffer of the project site. The surveys were carried out during low tide conditions, with water levels ranging from approximately –1.4 feet to –0.8 feet mean lower low water (MLLW), and –1.8 feet to –1.3 feet MLLW respectively, during the surveys. To facilitate mapping and to identify an appropriate eelgrass reference area with similar site characteristics in close proximity to the project area, an unmanned aerial vehicle (UAV) was used to survey the project site and adjacent intertidal areas located to the west and east of the project area where eelgrass has previously been detected during baywide comprehensive surveys (Merkel & Associates, Inc. 2015). The UAV flights were carried out by H. T. Harvey & Associates on April 30 and May 38, 2021. Color and near infrared imagery were collected to support detection and mapping of eelgrass, using automated flight control software to capture overlapping still images of the study area from an altitude of approximately 200 feet above ground level. Structure-from-motion photogrammetry software (ArcGIS Drone2Map) was then used to create rectified orthomosaics of the survey area. Following completion of the May UAV survey, aerial orthoimagery was evaluated using spectral and object-oriented image analysis techniques to determine whether eelgrass was present within the survey area. Ground truthing was subsequently conducted on June 15th during a –0.5 foot low tide with an emphasis on lower Sanchez Creek, where the presence of several mixed algal beds identified in the imagery and associated with cobble/rubble substrate could have had the potential to mask or obscure sparse eelgrass in the aerial imagery. The results of the eelgrass survey are presented in a memo included in this report as Appendix C.

Section 3.0 Regulatory Setting

Biological resources on the project site are regulated by a number of federal, state, and local laws and ordinances, as described below.

3.1 Federal

3.1.1 Clean Water Act

The Clean Water Act (CWA) functions to maintain and restore the physical, chemical, and biological integrity of waters of the U.S., which include, but are not limited to, tributaries to traditionally navigable waters currently or historically used for interstate or foreign commerce, and adjacent wetlands. Historically, in non-tidal waters, U.S. Army Corp of Engineers (USACE) jurisdiction extends to the ordinary high water (OHW) mark, which is defined in Title 33, Code of Federal Regulations (CFR), Part 328.3. If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark to the outer edges of the wetlands. Wetlands that are not adjacent to waters of the U.S. are termed "isolated wetlands" and, depending on the circumstances, may be subject to USACE jurisdiction. If there are wetlands adjacent to channelized features, the limits of USACE jurisdiction extend beyond the OHW mark or HTL to the outer edges of the wetlands.

On December 30, 2022, the U.S. Environmental Protection Agency and Department of the Army (the agencies) announced a final rule founded upon the pre-2015 definition of "waters of the United States." To determine jurisdiction for tributaries, adjacent wetlands, and additional waters, the final rule relies on the longstanding approach of applying two standards. This rule was further affected in implementation by the May 25, 2023 decision for *Sackett v. Environmental Protection Agency* and subsequent issuance of the September 2023 rule to address *Sackett's* conclusions (referred to as the 2023 Conforming Rule). As such, potentially jurisdictional wetlands and waters of the U.S. are considered jurisdictional if they would have been under the 2022 rule or the pre-2015 definition, but not if they lack a "continuous surface connection" to navigable waters and their tributaries. Waters lacking such a connection are termed "isolated" and currently are not generally regulated by the USACE.

The placement of fill into waters of the U.S. must comply with permit requirements of the USACE. No USACE permit will be effective in the absence of Section 401 Water Quality Certification. The State Water Resources Control Board (SWRCB) is the state agency (together with the Regional Water Quality Control Boards [RWQCBs]) charged with implementing water quality certification in California.

3.1.1.1 Project Applicability

USACE completed and filed a Preliminary Jurisdictional Delineation (PJD) of Waters of the U.S. for the project site (USACE 2021). The PJD determined that the northern and eastern edge of the project study area along the San Francisco Bay and Sanchez Creek up to the HTL would be claimed as waters of the U.S by USACE under

Section 404 of the CWA. Additionally, the PJD verified that 0.4 acres of seasonal wetlands within site's interior are three-parameter wetlands and would be regulated under Section 404 of the CWA. However, this was prior to adoption of the 2023 Conforming Rule. Under the Conforming Rule, it is likely that the seasonal wetlands on-site would be considered "isolated" and therefore could potentially be disclaimed by the USACE under an Approved Jurisdictional Determination. Sanchez Creek and the Bay itself would still be considered waters of the U.S. The project proponent does not intend to request an Approved Jurisdictional Determination from the USACE. Placement of fill within waters of the U.S. associated with the project will require a Section 404 permit from USACE.

3.1.2 Rivers and Harbors Act

Section 10 of the Rivers and Harbors Act of 1899 prohibits the creation of any obstruction to the navigable capacity of waters of the U.S., including discharge of fill and the building of any wharfs, piers, jetties, and other structures without Congressional approval or authorization by the Chief of Engineers and Secretary of the Army (33 U.S.C. 403).

Navigable waters of the U.S., which are defined in 33 CFR, Part 329.4, include all waters subject to the ebb and flow of the tide, and/or those which are presently or have historically been used to transport commerce. The shoreward jurisdictional limit of tidal waters is further defined in 33 CFR, Part 329.12 as "the line on the shore reached by the plane of the mean (average) high water." It is important to understand that USACE does not regulate wetlands under Section 10, only the aquatic or open waters component of bay habitat, and that there is overlap between Section 10 jurisdiction and Section 404 jurisdiction. According to 33 CFR, Part 329.9, a waterbody that was once navigable in its natural or improved state retains its character as "navigable in law" even though it is not presently used for commerce as a result of changed conditions and/or the presence of obstructions. Historical Section 10 waters may occur behind levees in areas that are not currently exposed to tidal or muted-tidal influence, and meet the following criteria: (1) the area is presently at or below the mean high water (MHW) line; (2) the area was historically at or below MHW in its "unobstructed, natural state"; and (3) there is no evidence that the area was ever above MHW.

As mentioned above, Section 404 of the CWA authorizes USACE to issue permits to regulate the discharge of dredged or fill material into waters of the U.S. If a project also proposes to discharge dredged or fill material and/or introduce other potential obstructions in navigable waters of the U.S., a Letter of Permission authorizing these impacts must be obtained from USACE under Section 10 of the Rivers and Harbors Act.

3.1.2.1 Project Applicability

The area of San Francisco Bay and Sanchez Creek within the project site is subject to the ebb and flow of the tide, and would be considered by USACE as current Section 10 waters up to MHW elevation (6.22 ft NAVD88). To authorize the work areas below this elevation, a Letter of Permission will be required from USACE.

3.1.3 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) protects federally listed wildlife species from harm or "take", which is broadly defined as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in any such conduct." Take can also include habitat modification or degradation that directly results in death or injury of a listed wildlife species. An activity can be defined as "take" even if it is unintentional or accidental. Listed plant species are provided less protection than listed wildlife species. Listed plant species are legally protected from take under FESA only if they occur on federal lands.

The U.S. Fish and Wildlife Service (USFWS) and the National Marine Fisheries Service (NMFS) have jurisdiction over federally listed, threatened, and endangered species under FESA. USFWS also maintains lists of proposed and candidate species. Species on these lists are not legally protected under FESA, but may become listed in the near future and are often included in their review of a project.

3.1.3.1 Project Applicability

No suitable habitat for any federally listed plant species occurs on the project site. Thus, no federally listed plant species are expected to occur on the project site. The monarch butterfly (*Danaus plexippus*), which is a candidate for listing under FESA, may occur on the project site as an occasional visitor during fall and spring migration. Federal candidate species do not receive statutory protection under FESA, but USFWS encourages conservation of candidate species because they may warrant listing in the near future. Therefore, no incidental take approval from USFWS would be needed if take of this species were to occur prior to its listing. Because monarch butterflies have not regularly been documented on the site, and in particular because they are not known to form fall or winter roost aggregations anywhere in the site vicinity, the project is not expected to impact this species.

Federally listed animal species that could potentially occur in open waters within the project site are the southern distinct population segment of the North American green sturgeon (*Acipenser medirostris*), the San Francisco Bay-Delta distinct population segment of longfin smelt (*Spirinchus thaleichthys*) (Bay-Delta longfin smelt), and the Central California Coast steelhead (*Oncorhynchus mykiss*). Those portions of the project site that occur in the San Francisco Bay and Sanchez Creek are located within designated critical habitat for the green sturgeon. Because the project may result in impacts to steelhead and green sturgeon, and critical habitat for green sturgeon, and to longfin smelt, FESA Section 7 consultation between NMFS, USFWS and USACE would be required to assess potential impacts of the project on these species.

3.1.4 Magnuson-Stevens Fishery Conservation and Management Act

The Magnuson-Stevens Fishery Conservation and Management Act governs all fishery management activities that occur in federal waters within the United States' 200-nautical-mile limit. The Act establishes eight Regional Fishery Management Councils responsible for the preparation of fishery management plans (FMPs) to achieve the optimum yield from U.S. fisheries in their regions. These councils, with assistance from NMFS, establish Essential Fish Habitat (EFH) in FMPs for all managed species. Federal agencies that fund, permit, or implement

activities that may adversely affect EFH are required to consult with NMFS regarding potential adverse effects of their actions on EFH, and respond in writing to recommendations by NMFS.

3.1.4.1 Project Applicability

All intertidal habitats on the project site up to the elevation of mean higher high water (6.84 ft NAVD88) are considered to be EFH for a number of species that are federally managed under one or more of the following three FMPs:

- Coastal Pelagic FMP—northern anchovy (*Engraulis mordax*), Pacific sardine (*Sardinops sagax*), mackerel, squid
- Pacific Groundfish FMP—various rockfish, soles, and sharks
- Pacific Salmon FMP—Chinook salmon (*Oncorhynchus tshawytscha*)

FMP-managed fish species such as the Central Valley fall-run Chinook salmon, northern anchovy, starry flounder (*Platichthys stellatus*), English sole (*Parophrys vetulus*), and leopard shark (*Triakis semifasciata*) may occasionally migrate or forage in the adjacent intertidal habitats with the project site and open water habitat adjacent to the site; however, nursery habitat for these species is not present in these areas. Because the project would modify portions of the intertidal habitat along the north and east sides of the project, consultation with NMFS regarding potential project effects on EFH would be required; this consultation would occur concurrently with Section 7 consultation under FESA, as described above.

3.1.5 Federal Migratory Bird Treaty Act

The federal Migratory Bird Treaty Act (MBTA), 16 U.S.C. Section 703, prohibits killing, possessing, or trading of migratory birds except in accordance with regulations prescribed by the Secretary of the Interior. The MBTA protects whole birds, parts of birds, and bird eggs and nests, and it prohibits the possession of all nests of protected bird species whether they are active or inactive. An active nest is defined as having eggs or young, as described by USFWS in its June 14, 2018 memorandum "Destruction and Relocation of Migratory Bird Nest Contents" (USFWS 2018). Nest starts (nests that are under construction and do not yet contain eggs) and inactive nests are not protected from destruction.

3.1.5.1 Project Applicability

All native bird species that occur on the project site are protected under the MBTA.

3.1.6 Marine Mammal Protection Act

The Marine Mammal Protection Act prohibits the take of marine mammals, with certain exceptions, in waters under the jurisdiction of the U.S. or by citizens of the U.S. on the high seas, as well as the importation of marine mammals and marine mammal products into the U.S. Take is defined as "to harass, hunt, capture, or kill, or attempt to harass, hunt, capture, or kill any marine mammal." Harassment is defined as "any act of pursuit,

torment, or annoyance which has the potential to injure a marine mammal or marine mammal stock in the wild; or has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering."

3.1.6.1 Project Applicability

One of six recognized Pacific harbor seal (*Phoca vitulina*) haul-out sites in the South San Francisco Bay is located at Bair Island approximately 8 miles southeast of the project site (Fox 2008), and harbor seals may occasionally forage in open water near the project site. California sea lions (*Zalophus californianus*) do not breed in the San Francisco Bay, but occasionally occur as common residents of the San Francisco Bay year-round. Small numbers of harbor seals and sea lions may forage in the open waters near the project site. However, no haul-out sites for either species occur on or near the project site.

3.2 State

3.2.1 CWA Section 401/Porter-Cologne Water Quality Control Act

SWRCB works in coordination with the nine RWQCBs to preserve, protect, enhance, and restore water quality. Each RWQCB makes decisions related to water quality for its region, and may approve, with or without conditions, or deny projects that could affect waters of the State. Their authority comes from the CWA and the State's Porter-Cologne Water Quality Control Act (Porter-Cologne). Porter-Cologne broadly defines waters of the State as "any surface water or groundwater, including saline waters, within the boundaries of the state." Because Porter-Cologne applies to any water, whereas the CWA applies only to certain waters, California's jurisdictional reach overlaps and may exceed the boundaries of waters of the U.S. For example, Water Quality Order No. 2004-0004-DWQ states that "shallow" waters of the State include headwaters, wetlands, and riparian areas. Moreover, the San Francisco Bay Region RWQCB's Assistant Executive Director, has stated that, in practice, RWQCBs claim jurisdiction over riparian areas. Where riparian habitat is not present, such as may be the case at headwaters, jurisdiction is taken to the top of bank.

The SWRCB adopted the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (SWRCB 2021). In these new guidelines, riparian habitats are not specifically described as waters of the state but instead as important buffer habitats to streams that do conform to the State Wetland Definition. The Procedures describe riparian habitat buffers as important resources that may both be included in required mitigation packages for permits for impacts to waters of the state, as well as areas requiring permit authorization from RWQCBs if impacted.

Pursuant to the CWA, projects that are regulated by USACE must also obtain a Section 401 Water Quality Certification permit from RWQCB. This certification ensures that the proposed project will uphold state water quality standards. Because California's jurisdiction to regulate its water resources is much broader than that of the federal government, proposed impacts on waters of the State require Water Quality Certification even if the area occurs outside of USACE jurisdiction. Moreover, RWQCB may impose mitigation requirements even

if USACE does not. Under the Porter-Cologne, SWRCB and the nine regional boards also have the responsibility of granting CWA National Pollutant Discharge Elimination System (NPDES) permits and Waste Discharge Requirements for certain point-source and non-point discharges to waters. These regulations limit impacts on aquatic and riparian habitats from a variety of urban water sources.

3.2.1.1 Project Applicability

The open water of the San Francisco Bay and Sanchez Creek, and the seasonal wetland habitat within the interior of the site would be claimed as waters of the State by RWQCB. Such areas fall under jurisdiction of the San Francisco RWQCB, and a Section 401 Water Quality Certification would be required for the project.

3.2.2 California Endangered Species Act

The California Endangered Species Act (CESA; California Fish and Game Code [CFGC], Chapter 1.5, Sections 2050-2116) prohibits the take of any plant or animal listed or proposed for listing as rare (plants only), threatened, or endangered. In accordance with CESA, CDFW has jurisdiction over state-listed species (Fish and Game Code 2070). CDFW regulates activities that may result in "take" of individuals (i.e., "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill"). Habitat degradation or modification is not expressly included in the definition of "take" under the CFGC. CDFW, however, has interpreted "take" to include the "killing of a member of a species which is the proximate result of habitat modification."

3.2.2.1 Project Applicability

The state listed longfin smelt may be present as an occasional forager in the open bay waters and in Sanchez Creek within the project site. In June 2024, the California Fish and Game Commission approved white sturgeon (*Acipenser transmontanus*) as a candidate species for listing under CESA. White sturgeon may be present in the open channels of South San Francisco Bay, adjacent to the project site. Similarly, in October 2024, the California Fish and Game Commission designated the burrowing owl (*Athene cunicularia*) as a candidate species for listing under CESA. Because the project may result in impacts to longfin smelt and white sturgeon, and possibly to occasional migrant burrowing owls, additional consultation with CDFW may be necessary.

No suitable habitat for any state-listed plant species occurs on the project site. Thus, state-listed plant species are not expected to occur on the project site.

3.2.3 CEQA

CEQA is a state law that requires state and local agencies to document and consider the environmental implications of their actions and to refrain from approving projects with significant environmental effects if there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. CEQA requires the full disclosure of the environmental effects of agency actions, such as approval of a general plan update or the projects covered by that plan, on resources such as air quality, water quality, cultural resources, and biological resources. The State Resources Agency promulgated guidelines for implementing CEQA are known as the State CEQA Guidelines.

Section 15380(b) of the State CEQA Guidelines provides that a species not listed on the federal or state lists of protected species may be considered rare if the species can be shown to meet certain specified criteria. These criteria have been modeled after the definitions in FESA and CESA and the section of the CFGC dealing with rare or endangered plants and animals. This section was included in the guidelines primarily to deal with situations in which a public agency is reviewing a project that may have a significant effect on a species that has not yet been listed by either USFWS or CDFW or species that are locally or regionally rare.

CDFW has produced three lists (amphibians and reptiles, birds, and mammals) of "species of special concern" that serve as "watch lists". Species on these lists are of limited distribution or the extent of their habitats has been reduced substantially, such that threat to their populations may be imminent. Thus, their populations should be monitored. They may receive special attention during environmental review as potential rare species, but do not have specific statutory protection. All potentially rare or sensitive species, or habitats capable of supporting rare species, are considered for environmental review per the CEQA Section 15380(b).

CNPS, a non-governmental conservation organization, has developed CRPRs for plant species of concern in California in the Inventory of Rare and Endangered Plants (CNPS 2024). The CRPRs include lichens, vascular, and non-vascular plants, and are defined as follows:

- CRPR 1A Plants considered extinct
- CRPR 1B Plants rare, threatened, or endangered in California and elsewhere
- CRPR 2A Plants considered extinct in California but more common elsewhere
- CRPR 2B Plants rare, threatened, or endangered in California but more common elsewhere
- CRPR 3 Plants about which more information is needed - review list
- CRPR 4 Plants of limited distribution-watch list

The CRPRs are further described by the following threat code extensions:

- .1—seriously endangered in California
- .2—fairly endangered in California
- .3—not very endangered in California

Although CNPS is not a regulatory agency and plants on these lists have no formal regulatory protection, plants appearing as CRPR 1B or 2 are, in general, considered to meet CEQA's Section 15380 criteria, and adverse effects on these species may be considered significant. Impacts on plants that are listed by CNPS as CRPR 3 or 4 are also considered during CEQA review, although because these species are typically not as rare as those of CRPR 1B or 2, impacts on them are less frequently considered significant.

Compliance with CEQA Guidelines Section 15065(a) requires consideration of natural communities of special concern, in addition to plant and wildlife species. Vegetation types of "special concern" are tracked in Rarefind (CNDDB 2023). Further, CDFW ranks sensitive vegetation alliances based on their global (G) and state (S) rankings analogous to those provided in the CNDDB. Global rankings (G1–G5) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas S rankings reflect the condition of a habitat within California. If an alliance is marked as a G1–G3, all the associations within it would also be of high priority. CDFW provides the Vegetation Classification and Mapping Program's (VegCAMP) currently accepted list of vegetation alliances and associations (CDFW 2021).

3.2.3.1 Project Applicability

All potential impacts on biological resources will be considered during CEQA review of the project. This Biological Resources Report assesses these impacts to facilitate project planning and CEQA review of the project by City of Burlingame. Project impacts are discussed in Section 6 below.

3.2.4 CFGC

Streams, rivers, creeks, dry washes, sloughs, blue line streams on USGS maps, and watercourses with subsurface flows fall under CDFW jurisdiction. Canals, aqueducts, irrigation ditches, and other means of water conveyance may also be considered streams if they support aquatic life, riparian vegetation, or stream-dependent terrestrial wildlife. A *stream* is defined in Title 14, California Code of Regulations Section 1.72, as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and that supports fish and other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." Using this definition, CDFW extends its jurisdiction to encompass riparian habitats that function as part of a watercourse. CFGC Section 2786 defines *riparian habitat* as "lands which contain habitat which grows close to and which depends upon soil moisture from a nearby freshwater source." The lateral extent of a stream and associated riparian habitat that would fall under the jurisdiction of CDFW can be measured in several ways, depending on the particular situation and the type of fish or wildlife at risk. At minimum, CDFW would claim jurisdiction over a stream's bed and bank. In areas that lack a vegetated riparian corridor, CDFW jurisdiction would extend to the top of the streambank. Where riparian habitat is present, the outer edge of riparian vegetation is generally used as the line of demarcation between riparian and upland habitats.

Pursuant to CFGC Section 1603, CDFW regulates any project proposed by any person that will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds." CFGC Section 1602 requires an entity to notify CDFW of any proposed activity that may modify a river, stream, or lake. If CDFW determines that proposed activities may substantially adversely affect fish and wildlife resources, a Lake and Streambed Alteration Agreement (LSAA) must be prepared. The LSAA sets reasonable conditions necessary to protect fish and wildlife, and must comply with CEQA. The applicant may then proceed with the activity in accordance with the final LSAA.

Specific sections of the CFGC describe regulations pertaining to protection of certain wildlife species. For example, Code Section 2000 prohibits take of any bird, mammal, fish, reptile, or amphibian except as provided by other sections of the code.

The CFGC Sections 3503, 3513, and 3800 (and other sections and subsections) protect native birds, including their nests and eggs, from all forms of take. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered "take" by CDFW. Raptors (i.e., eagles, hawks, and owls) and their nests are specifically protected in California under Code Section 3503.5. Section 3503.5 states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto."

Bats and other non-game mammals are protected by CFGC Section 4150, which states that all non-game mammals or parts thereof may not be taken or possessed except as provided otherwise in the code or in accordance with regulations adopted by the commission. Activities resulting in mortality of non-game mammals (e.g., destruction of an occupied nonbreeding bat roost, resulting in the death of bats), or disturbance that causes the loss of a maternity colony of bats (resulting in the death of young), may be considered "take" by CDFW.

Under the CFGC Section 7050, the Marine Life Management Act (MLMA) requires CDFW to ensure the sustainable use of California's living marine resources.

3.2.4.1 Project Applicability

The project site includes the downstream tidal reach and mouth of Sanchez Creek where it flows into the Bay. While a tidal channel within the project site, Sanchez Creek is a downstream continuation of a stream conveying freshwater surface flows from the hills to the west, with an upslope watershed. As such, the channel would be considered part of a river or stream and is likely to be regulated by CDFW under CFGC Section 1603. Impacts to the bank of Sanchez Creek would thus require notification to CDFW to obtain an LSAA. Most native bird, mammal, and other wildlife species that occur on the project site and in the immediate vicinity are protected by the CFGC.

Pacific herring (*Clupea pallasii*) are known to spawn in the vicinity of the project site, and potentially suitable spawning habitat is present in intertidal and subtidal areas within and adjacent to the project site. Pacific herring are not protected by state or federal laws. However, because they are an important commercial fishery in the San Francisco Bay, CDFW monitors spawning in the Bay and calculates spawning stock biomass annually, consistent with the MLMA of the CFGC. Therefore, potential impacts of the project on Pacific herring are evaluated in this biological resources report, and the project incorporates measures (such as restricting in-water activities to the non-spawning season) to minimize the potential for impacts to this species.

3.3 Local

3.3.1 City of Burlingame Tree Ordinance

The City of Burlingame Municipal Code, Section 11.06.020 defines a tree with protected status as: 1) Any tree with a circumference of forty-eight (48) inches or more when measured fifty-four (54) inches above natural grade; or 2) A tree or stand of trees so designated by the city council based upon findings that it is unique and of importance to the public due to its unusual appearance, location, historical significance or other factor; or 3) A stand of trees in which the director has determined each tree is dependent upon the others for survival.

Requirements regarding removal of or work significantly affecting protected trees are described in the City of Burlingame Municipal Code, Section 11.06.060: and include notices and permits required for removal or work significantly affecting protected trees. Requirements regarding tree replacement of removed protected trees are further described in the City of Burlingame Municipal Code, Section 11.06.090. Avoidance and minimization measures for trees to be preserved would include implementation of tree protection zones (i.e., protecting trees that are intended to remain on the site from incidental project disturbance) and development of a tree protection plan by a certified arborist. In addition, the project proponent would be required to comply with the City of Burlingame Municipal Code and submit permit applications for removal or damage of all trees covered by the ordinance. Any City street trees, or private protected ordinance-sized trees to be removed may require replacement with newly planted trees according to the discretion of Parks and Recreation Department. The City's tree ordinance requires that the tree replacement at a ratio of 1:1 include a 24-inch box size single stem landscape tree(s) (no fruit or nut trees), which may be planted anywhere on the project site. Municipal Code, Section 11.06.090 also describes the penalties for violation of the ordinance, or if conditions are not met within the allotted time as specified in Chapter 11.06.090. (b)(5), and could include payment into the tree replacement fund.

3.3.1.1 Project Applicability

The tree inventory and arborist report described in Section 2.2 and included as Appendix B, identified "protected" trees occurring on the site. The project will comply with the City of Burlingame tree replacement guidelines and policies for any protected trees that will be removed as part of the project.

3.3.2 The McAteer-Petris Act

The McAteer-Petris Act, enacted on September 17, 1965, serves as a legal provision under California state law to preserve San Francisco Bay from indiscriminate filling. The act initially established the San Francisco Bay Conservation and Development Commission (BCDC) as a temporary state agency charged with preparing a plan for the long-term use of the San Francisco Bay. In August 1969, the McAteer-Petris Act was amended to make BCDC a permanent regulatory agency to incorporate the policies of the Bay Plan (BCDC 2012). BCDC jurisdiction includes a 100-foot wide band along the shoreline of the San Francisco Bay. The *shoreline* is defined as all areas that are subject to tidal action from the south end of the San Francisco Bay to the Golden Gate (Point Bonita–Point Lobos), and to the Sacramento River line (a line between Stake Point and Simmons Point,

extended northeasterly to the mouth of Marshall Cut). BCDC will claim all sloughs (specifically marshlands lying between mean high tide and up to 5 feet above mean sea level where marsh vegetation is present); tidelands (lands between mean high tide and mean low tide); and submerged lands (land lying below mean low tide) in this region. The McAteer-Petris Act also requires that "maximum feasible public access, consistent with a project be included as part of each project to be approved by the BCDC."

3.3.2.1 Project Applicability

BCDC's Bay jurisdiction within the project study area is defined by the Bay edge, which is defined as the MHW elevation because tidal marsh vegetation is absent along the existing shoreline wave break. In addition, a 100-foot jurisdictional shoreline band would extend inland from that Bay edge, onto the project site. Work within the Bay jurisdiction and 100-foot shoreline band would require a permit from BCDC.

Section 4.0 Environmental Setting

4.1 General Project Area Description

Conditions on the site and surrounding land were created by the Anza Corporation in the mid to late 1960s by placement of fill without authorization across approximately 150 acres of former San Francisco Bay habitats. Following a lawsuit, this land was divided between the Anza Corporation and SLC. The project parcel is owned by SLC and was never developed. It is a vacant lot consisting of:

- Weedy (ruderal) upland habitat occupying the majority of the site with a few non-native shrubs and trees scattered around the site's periphery
- Unimproved Bay Trail along the northern edge
- Unused gravel "parking lot" at the western edge, adjacent to the Kincaid's restaurant paved parking lot
- Abandoned paved parking lot and other hardscape infrastructure related to the former Sherman Restaurant, which was located on a boat moored in Sanchez Creek, along the eastern edge
- Federal Aviation Administration (FAA) tower, located in the eastern parking lot, associated with San Francisco International Airport. The FAA has an existing lease and easement with SLC for this infrastructure.

The northern edge of the site borders the tidal waters of San Francisco Bay and is subject to considerable erosive force from wind-driven waves. The existing shoreline erosion protection consists of large concrete slabs, roadbed of the former San Mateo Bridge, placed onsite when the bridge was rebuilt. The fill soil was placed to create the Anza Area of Burlingame as described above. The slabs were stacked vertically to create the Anza Area boundary, and fill was then placed behind them. Along the northern property line, the concrete slabs have shifted somewhat over time and smaller riprap material was placed towards the toe of the slope. Along Sanchez Creek, the concrete slabs are still stacked vertically with, in some locations, sakrete concrete placed above them at or near the top of bank. The site's elevations are above the influence of regular tidal inundation from the bay. Under the current conditions, it is likely that the site would potentially flood during a 50-year coastal flood event (i.e., a flood event that has a 2% chance of occurrence in any given year).

The project site is underlain by two soil types: (1)W – Water and (2) 134 – Urban Land-Orthents, reclaimed complex, 0 to 2 percent slopes, which is found in areas that were once part of the San Francisco Bay and adjacent tidal flats. The Urban Land-Orthents soil type describes soils consisting of artificial fill overlying Bay mud.

4.2 Biotic Habitats

Reconnaissance-level surveys identified four habitat type/land uses within a biological study area defined as the project parcel plus an approximately 100-foot buffer into the open water habitat of the San Francisco Bay and Sanchez Creek: ruderal grassland (5.88 acres), developed/landscaping (3.04 acres), seasonal wetland (0.40 acre), and open water (3.50 acres) (Figure 3). These habitat types are described in detail below. Plant species observed during the reconnaissance survey are listed in Appendix A.

4.2.1 Ruderal Grassland

4.2.1.1 Vegetation

Ruderal grassland is the most dominant habitat type on the site, comprising the majority of the project site (5.88 acres). Ruderal grassland is an herbaceous vegetation characterized by dense cover of taller statured, non-native grasses and forbs. This habitat type is characterized by non-native upland grass and forb species such as fennel (*Foeniculum vulgare*), wild oats (*Avena fatua*), common vetch (*Vicia sativa*), Bermuda grass (*Cynodon dactylon*), pampas grass (*Cortaderia selloana*), and Italian thistle *(Carduus pycnocephalus*) (Photo A). There is very low cover of any native species in this grassland type. In a few locations, the ruderal grassland habitat type also includes individual trees. A few Monterey pines (*Pinus radiata*) were observed near the center portion of the project site. Other shrubs occurring scattered through the site include French broom (*Genista monspessulana*), as well as a single patch of Himalayan blackberry (*Rubus armeniacus*) in the southwestern portion of the site. The ruderal grassland habitat did not appear to be regularly mowed or maintained (prior to SPHERE taking over management), however, this habitat is degraded by trash deposition and encampments of unhoused people, and in the summer of 2020 a fire on-site burned about half of the ruderal grassland habitat before being extinguished.

Photo A. Ruderal Grassland Dominated by Non-Native Annual Species in the Center of the Project Site

4.2.1.2 Wildlife

Grasslands lack the structural diversity necessary to support a high diversity of wildlife species, but these habitats can be used as foraging, burrowing, and nesting locations by some species. While the extent of grassland within the study area is too limited to support many bird species associated with extensive grasslands, red-winged blackbirds (*Agelaius phoeniceus*) breed in dense grassland habitats, and over 50 birds and a small number of fledglings were observed during earlier site visits during the breeding season. Birds observed foraging in or otherwise occupying the grasslands within the study area during the reconnaissance survey included mourning

doves (*Zenaida macroura*), California towhees (*Melozone crissalis*), and house finches (*Haemorhous mexicanus*). Small mammals can often be abundant in ruderal grasslands, and several small mammal runways (clear pathways in the grass), were scattered throughout the grassland. Additionally, two small burrows were observed along the north and east perimeters of the site. The runways and burrows appeared to be that of the California ground squirrel (*Spermophilus beecheyi*), but no individuals of this species were observed during the reconnaissance survey. Although the grassland area supports an abundance of weedy plant species, native insects frequently forage on both native and non-native flowering plants in ruderal grasslands, and yellow-faced bumble bees (*Bombus vosnesenskii*), solitary bees, and western tiger swallowtail butterflies (*Papilio rutulus*) were observed foraging among the blackberry, gumweed (*Grindelia camporum*), and fennel during the reconnaissance survey.

4.2.2 Developed/Landscaped

4.2.2.1 Vegetation

Photo B. Developed Habitat in the Western Portion of the Project Site

The developed/landscaped habitat type (3.04 acres) was mapped in the areas surrounding the ruderal grassland habitat. This land cover type includes the areas of existing pavement and/or gravel, occurring outside of the fenced-off main portion of the property, as well as the hedgerow of ornamental trees planted around the perimeter of the project site (Photo B). The paved and/or gravel areas are largely devoid of vegetation and include only the occasional landscaped ornamental tree or shrub, or ruderal grass or herbaceous species such as those listed above. The ornamental plantings of non-native trees and shrubs along the southern perimeter consists of Monterey cypress, Blackwood acacia (*Acacia melanoxylon*), Ngaio (*Myoporum laetum*), and spider gum (*Eucalyptus conferruminata*).

4.2.2.2 Wildlife

Pavement and gravel areas that are devoid of vegetation do not provide high-quality wildlife habitat; however, lizards, such as the western fence lizard (*Sceloporus occidentalis*), may bask on these surfaces and a wide variety of wildlife cross or move along the road and trails en route to other habitats. Other wildlife most often associated with developed/landscaped areas are those that are tolerant of periodic human disturbances, including introduced species such as the European starling (*Sturnus vulgaris*), rock pigeon (*Columba livia*), house mouse (*Mus musculus*), Norway rat (*Rattus norvegicus*), and black rat (*Rattus rattus*). Numerous common, native species are also able to utilize these habitats for nesting and roosting, especially around the ornamental trees. These include a variety of birds, such as the American crow (*Corvus brachyrhynchos*), Anna's hummingbird (*Calypte anna*), Bewick's wren (*Thryomanes bewickii*), dark-eyed juncos (*Junco hyemalis*), and California scrub-jay (*Aphelocoma californica*), all of which were observed on the project site during the reconnaissance survey. Killdeer (*Charadrius*

vociferus) also frequently occur in developed habitats and may nest on gravel areas on the north and south sides of the project site, although they would be less likely to do so along the east pathway that is subject to frequent pedestrian foot traffic. An examination of trees on the project site failed to find any large cavities that might provide suitable bat roosting habitat. Therefore, large roosting or maternity colonies of bats are not expected to occur on the project site. Similarly, a focused survey of trees around the project site detected no evidence (i.e., old nests) of raptors having previously nested on the site. Native striped skunk (*Mephitis mephitis*) sometimes occupy developed or ruderal habitats near the Bay and may occur on site, based on the presence of one potential burrow.

4.2.3 Seasonal Wetland

4.2.3.1 Vegetation

Seasonal wetland habitat occurs in shallow depressions spread across the study area from the northwest corner to the southeast corner, but primarily occurring in the north-central portion of the site. These depressions range in size from 10 square feet to over 5600 square feet (0.13 acre) for a total of 0.40 acres (Photo C). Because the entire project site was former fill on bay mudflats, the depressions are likely the result of differential settlement of that fill, as well as subsequent movement of soils on the site, resulting in man-made depressions.

Photo C. Seasonal Wetland in a Shallow Depression in the Center of the Project Site

The hydrology supporting the seasonal wetlands is periodic, brief inundation in winter months following precipitation events. The wetlands primarily support non-native or invasive plant species such as Mediterranean barley (*Hordeum marinum* ssp. *gussoneanum*), Italian rye grass (*Festuca perennis*), Buckhorn plantain (*Plantago coronopus*), bristly ox-tongue (*Helminthotheca echioides*), and curly dock (*Rumex crispus*). Upland species, mainly fennel and wild oats, mark a clear boundary between upland areas and seasonal wetlands. Similar to the ruderal grassland habitat discussed above, all seasonal wetlands on site are impacted to a greater or lesser degree by trash deposition and/or encampments of unhoused people. Overall, the habitat quality of these seasonal wetlands is considered low due to the limited duration of inundation, the lack of connection to a larger watershed, and the dominance of non-native species.

H. T. HARVEY & ASSOCIATES
Ecological Consultants

Figure 3. Biotic Habitat Map
Bay Rise Park – Biological Resources Report (4113-02)
December 2024

4.2.3.2 Wildlife

Seasonal wetlands can provide habitat for a unique array of special-status and common wildlife species that rely specifically on the particular features they provide. However, the seasonal wetlands in the study area provide only marginal habitat for wetland-associated wildlife species due to their highly disturbed nature, limited extent, and limited depth and duration of ponding, if these wetlands support ponding at all. Thus, wildlife diversity is expected to be low. No amphibians are expected to use these wetlands, both because they do not provide suitable breeding habitat and because the site is isolated by salt water and intensive development from potential source populations of amphibians. These wetlands do not pond deep or long enough to provide suitable habitat for waterbirds, such as ducks or shorebirds, and no individuals of those species have been observed using seasonal wetlands on the project site during site surveys. When this habitat is dry, it is functionally similar to the adjacent ruderal grasslands from the perspective of wildlife use. Thus, many of the same bird species, small mammals, and pollinators described in the developed/landscaped and ruderal annual grassland habitats above may forage in the seasonal wetlands, such as the dark-eyed junco, California towhee, California ground squirrel, and bumble bees.

4.2.4 Open Water and Intertidal Habitat (San Francisco Bay and Sanchez Creek)

4.2.4.1 Vegetation

Photo D. Open Water Habitat along the North Edge of the Project Site

Open water habitat occurs within the project site bayward of the existing concrete rubble shoreline protection and in Sanchez Creek (Photo D). The northern edge of the site borders the tidal waters of San Francisco Bay while the eastern boundary consists of Sanchez Creek, a tidal channel that is connected to a tidal lagoon located to the south and southwest of the project site. The boundaries of the open water habitat as shown on Figure 3 were identified as the limits of the HTL; this line was identified in the field based on the observation of a watermark and wracking along the levee forming the edge of the Bay shoreline and Sanchez Creek, but roughly corresponds with a tidal elevation of 8.4 feet NAVD88. The existing concrete rubble shoreline protection along both the Bay edge and Sanchez Creek slopes steeply to an elevation of approximately 2 feet NAVD 88 at which point a shallow, mostly subtidal mudflat begins and gently slopes to the north. This mudflat along the edge of the existing shoreline is only exposed at the lowest daily tides a few times a month, for example when the daily low tide drops below 1.5 feet NAVD88 during the full and new moon cycles (i.e., spring tides). Along the Sanchez Creek, the bank is steeper and the channel more entrenched, such that mudflats in this area are less frequently exposed.

In the San Francisco Bay, rocky substrates in the intertidal zone are characterized as areas supporting natural rock, boulders, and bedrock, but also include manmade structures such as seawalls, piers, and riprap (Subtidal Goals Project 2010). Like natural rocky intertidal habitats, concrete debris shorelines along the intertidal zone can be subjected to daily tidal fluctuations, and because they provide similar structure as natural rocky habitats, they are functionally similar as well. Though artificial substrates in the intertidal zone tend to support less diverse plant communities compared to natural rocky shorelines, they can support a variety of species, such as algae and kelp that are adapted to tidal disturbance and fluctuations in moisture, temperature, and salinity. The existing concrete shoreline on the site was moderately covered in mats of brown, green, and red macro algae, including native rockweed (*Fucus distichus*), *Ulva* spp., and *Mastocarpus* spp.

4.2.4.2 Wildlife

Open Water—Open waters surrounding the project site support a variety of fish, waterbirds, and marine mammals. Fish that may occur as occasional foragers in open waters of the San Francisco Bay and Sanchez Creek, include bat ray (*Myliobatis californica*), Pacific herring, threespine stickleback (*Gasterosteus aculeatus*), and starry flounder. The Central California Coast steelhead and Central Valley fall-run Chinook salmon may occur as infrequent migrants foraging in these waters. Northern anchovy and topsmelt (*Atherinops affinis*) are also uncommon visitors that may infrequently forage in the area. A variety of non-breeding resident and winter visitor waterbirds that frequently forage for fish and marine invertebrates in bay waters adjacent to the project site, and in Sanchez Creek, include surf scoter (*Melanitta perspicillata*), western gull (*Larus occidentalis*), Caspian tern (*Hydroprogne caspia*), bufflehead (*Bucephala albeola*), mallard (*Anas platyrhynchos*), and Clark's grebe (*Aechmophorus clarkii*), the latter of which was observed during the reconnaissance survey. Though no haulout sites for marine mammals are known in the project vicinity, harbor seals and California sea lions occasionally forage in Bay waters near the site.

Intertidal Rocky Shoreline—Artificial substrates like riprap and concrete debris, in the intertidal zone, support a variety of animals that can hold onto the substrate such as mussels, clams, anemones, and oysters (Subtidal Goals Project 2010). Low densities of bivalve mollusks were observed along the concrete shoreline and primarily include native Olympia oysters (*Ostrea lurida*) and mussels (*Mytilus* spp.). The majority of observed mussels were attached to concrete debris substrate, with lower densities observed as deposited shells. In contrast, the majority of Olympia oysters were observed as deposited shells. High densities of barnacles (*Chthamalus* spp.) were also observed attached to the majority of the concrete shoreline during the reconnaissance site visit. Other species such as crabs and fishes may also live on and under the substrate. Pacific herring found in open waters of the Bay spawn in the intertidal and subtidal zone and have potential to spawn on the riprap shoreline on the project site. Waterbirds such as black oystercatcher (*Haematopus bachmani*), surfbird (*Aphriza virgata*), and ruddy turnstone (*Arenaria interpres*) may be occasional visitors, and forage on invertebrates on this shoreline habitat, but they are not expected to breed here.

Intertidal Mudflat—Mudflats are an important habitat because they support a vast array of crustaceans, worms, and other invertebrates that are important food sources for resident and migratory shorebirds. Shorebirds such as the western sandpiper (*Calidris mauri*), least sandpiper (*Calidris minutilla*), dunlin (*Calidris*

alpina), marbled godwit (*Limosa fedora*), short-billed dowitcher (*Limnodromus griseus*), and black-bellied plover (*Pluvialis squatarola*) may occasionally forage on these mudflats when they are exposed. Such shorebirds are most abundant during fall and spring migration and during the winter non-breeding season. Due to the limited extent of mudflat habitat immediately adjacent to the project site, few shorebirds are attracted to the site under existing conditions, but one greater yellowlegs (*Tringa melanoleuca*) was observed during the reconnaissance site visit.

4.3 Nonnative and Invasive Plant Species

As noted above, a majority of the species observed throughout the ruderal grassland and within the seasonal wetlands on the project site are nonnative plant species and many are listed as invasive species by the California Invasive Plant Council (Cal-IPC) (2021). The following categorizes the subset of nonnative plant species that occur onsite that are rated by the Cal-IPC as limited, moderate, or highly invasive.

Bristly ox-tongue, wild radish (*Raphanus sativus*), blackwood acacia, California burclover (*Medicago polymorpha*), rose clover (*Trifolium hirtum*), olive tree (*Olea europaea*), ribwort plantain (*Plantago lanceolata*), Rabbitsfoot grass (*Polypogon monspeliensis*), smilo grass (*Stipa miliacea*), and curly dock are rated as "Limited" by the Cal-IPC (2021). Fennel, Italian thistle, stinkwort (*Dittrichia graveolens*), slender oat (*Avena barbata*), wild oats, ripgut brome (*Bromus diandrus*), Bermuda grass, Italian rye grass, foxtail barley (*Hordeum murinum*), Harding grass (*Phalaris aquatica*), and Ngaio also occur on the project site and are rated as moderately invasive; thus they can cause substantial ecological impacts on physical processes, plant and animal communities, and vegetation structure (Cal-IPC 2021). Broadleaved pepperweed (*Lepidium latifolium*), Scotch broom (*Cytisus scoparius*), French broom, pampasgrass, and Himalayan blackberry are rated as highly invasive by Cal-IPC and thus may also potentially cause significant ecological impacts (Cal-IPC 2021).

Section 5.0 Special-Status Species and Sensitive Habitats

CEQA requires assessment of the effects of a project on species that are protected by state, federal, or local governments as "threatened, rare, or endangered"; such species are typically described as "special-status species." For the purpose of the environmental review of the project, special-status species have been defined as described below. Impacts on these species are regulated by some of the federal, state, and local laws and ordinances described in Section 3.0 above.

For purposes of this analysis, "special-status" plants are considered plant species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, rare, or a candidate species.
- Listed by CNPS as CRPR 1A, 1B, 2, 3, or 4.

For purposes of this analysis, "special-status" animals are considered animal species that are:

- Listed under FESA as threatened, endangered, proposed threatened, proposed endangered, or a candidate species.
- Listed under CESA as threatened, endangered, or a candidate threatened or endangered species.
- Designated by CDFW as a California species of special concern.
- Listed in the CFGC as fully protected species (fully protected birds are provided in Section 3511, mammals in Section 4700, reptiles and amphibians in Section 5050, and fish in Section 5515).

Information concerning threatened, endangered, and other special-status species that potentially occur on the project site was collected from several sources and reviewed by H. T. Harvey & Associates biologists as described in Section 2.1 above. Figure 4 depicts CNDDB records of special-status plant species in the general vicinity of the project site and Figure 5 depicts CNDDB records of special-status animal species. These generalized maps show areas where special-status species are known to occur or have occurred historically.

5.1 Special-Status Plant Species

CNPS (2024) and CNDDB (2023) identify 99 special-status plant species as potentially occurring in at least one of the nine USGS quadrangles containing or surrounding the project site for CRPR 1 - 4 species. All 99 of those potentially occurring special-status plant species were determined to be absent from the project site for at least one of the following reasons: (1) lack of suitable habitat types; (2) absence of specific microhabitat or edaphic requirements, such as serpentine soils; (3) the elevation range of the species is outside of the range on

the project site; and/or (4) the species is considered extirpated. As described in Section 4.1 above, the entirety of the project site consists of fill placement on former Bay habitats, so the habitats present on-site represent recently created, novel habitats. Given the degree of development surrounding the site there would not have been opportunities for special-status plants to colonize the site. The existing shoreline within the project site is not considered suitable habitat, as it is comprised of riprap along a levee, with no substrate suitable for the growth of special status plants. The seasonal wetlands on-site are dominated by nonnative, invasive species, and subject to frequent disturbance which further diminishes their suitability as habitat for special-status plant species. Therefore, due to the fact that the entire project site is located on non-native fill, in combination with the level of disturbance on and surrounding the project site and the lack of any habitat dominated by native species, special-status plant species were determined to be absent on-site. Table 3 below describes the rationale for excluding species with CNDDB (2024) records occurring within 5 miles of the project site in additional detail.

5.2 Special-Status Animal Species

The legal status and likelihood of occurrence on the project site of special-status animal species known to occur, or potentially occurring, in the project region are presented in Table 4. Most of the special-status species listed in Table 4 are not expected to occur on the project site because it lacks suitable habitat, is outside the known range of the species, and/or is isolated from the nearest known extant populations by development or otherwise unsuitable habitat. Animal species not expected to occur on the project site for these reasons include the Bay checkerspot butterfly (*Euphydryas editha bayensis*), mission blue butterfly (*Icaricia icarioides missionensis*), San Bruno elfin butterfly (*Callophrys mossii bayensis*), Callippe silverspot butterfly (*Speyeria callippe callippe*), Myrtle's silverspot butterfly (*Speyeria zerene myrtleae*), western bumble bee (*Bombus occidentalis occidentalis*), Crotch bumble bee (*Bombus crotchii*), California red-legged frog (*Rana draytonii*), San Francisco garter snake (*Thamnophis sirtalis tetrataenia*), western snowy plover (*Charadrius alexandrinus nivosus*), California Ridgway's rail (*Rallus obsoletus obsoletus*), California black rail (*Laterallus jamaicensis coturniculus*), salt marsh harvest mouse (*Reithrodontomys raviventris*), long-eared owl (*Asio otsu*), pallid bat (*Antrozous pallidus*), Townsend's big-eared bat (*Corynorhinus townsendii*), San Francisco dusky-footed woodrat (*Neotoma fuscipes annectens*), salt marsh wandering shrew (*Sorex vagrans halicoetes*), and northwestern pond turtle (*Emys pallida*).

A number of special-status bird species can occasionally occur on the project site as nonbreeding foragers (i.e., they do not nest on the project site). These are the California least tern (*Sternula antillarum browni*), tricolored blackbird (*Agelaius tricolor*), northern harrier (*Circus cyaneus*), burrowing owl, Vaux's swift (*Chaetura vauxi*), olive-sided flycatcher (*Contopus cooperi*), San Francisco common yellowthroat (*Geothlypis trichas sinuosa*), yellow warbler (*Setophaga petechia*), Alameda song sparrow (*Melospiza melodia pusillula*), Bryant's savannah sparrow (*Passerculus sandwichensis alaudinus*), western red bat (*Lasiurus blossevillii*), and white-tailed kite (*Elanus leucurus*). None of these species are expected to occur regularly or in large numbers on the site, though.

Table 3. Special-Status Plant Species, Their Status, and Potential Occurrence on the Project Site

Name	Status[1]	Habitat	Potential for Occurrence on the Project site
Federal or State Endangered, Threatened, or Candidate Species			
Acanthomintha duttonii San Mateo thorn-mint	1B.1, SE, FE	Chaparral, valley and foothill grassland. Microhabitat: Serpentine	Absent. No suitable chaparral habitat, valley and foothill grassland, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Cirsium fontinale var. *fontinale* fountain thistle	1B.1, SE, FE	Chaparral (openings), cismontane woodland, meadows and seeps, and valley and foothill grassland. Microhabitat: Seeps, Serpentine	Absent. No suitable chaparral habitat, cismontane woodland, meadows and seeps, valley and foothill grassland, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Eriophyllum latilobum San Mateo woolly sunflower	1B.1, SE, FE	Cismontane woodland (often serpentinite, roadcuts), coastal scrub, and lower montane coniferous forest	Absent. No suitable cismontane woodland, coastal scrub, or lower montane coniferous forest is present on the project site. Additionally, this species was not observed during the May 2020 surveys. Thus, this species is determined to be absent.
Hesperolinon congestum Marin western flax	1B.1, ST, FT	Chaparral, valley and foothill grassland. Microhabitat: Serpentine	Absent. No suitable chaparral habitat, valley and foothill grassland, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Pentachaeta bellidiflora white-rayed pentachaeta	1B.1, SE, FE	Cismontane woodland, and valley and foothill grassland (often serpentinite)	Absent. No suitable cismontane woodland, valley and foothill grassland, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
California Rare Plants			
Allium peninsulare var. *franciscanum* Franciscan onion	1B.2	Cismontane woodland, and valley and foothill grassland. Microhabitat: Clay, Serpentine (often), Volcanic	Absent. No suitable cismontane woodland, valley and foothill grassland, or serpentine or volcanic soils are present on the project site. The soil is comprised of fill material at the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Amsinckia lunaris bent-flowered fiddleneck	1B.2	Cismontane woodland, coastal bluff scrub, valley and foothill grassland	Absent. No suitable cismontane woodland, coastal bluff scrub, or valley and foothill grassland are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.

Name	Status[1]	Habitat	Potential for Occurrence on the Project site
Astragalus pycnostachyus var. *pycnostachyus* coastal marsh milk-vetch	1B.2	Coastal dunes (mesic), coastal scrub, and marshes and swamps (coastal salt, stream sides)	Absent. No suitable coastal dune habitat or coastal scrub is present on the project site. There are small seasonal wetlands on-site, however, they contain non-native, invasive species and are subject to frequent disturbance. This species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Chloropyron maritimum ssp. *palustre* Point Reyes salty bird's-beak	1B.2	Marshes and swamps (coastal salt)	Absent. There is no suitable coastal salt marsh or swamp habitat present on the project site. Additionally, this species was not observed during the May 2020 surveys. Thus, this species is determined to be absent.
Collinsia multicolor San Francisco collinsia	1B.2	Closed-cone coniferous forest, coastal scrub. Microhabitat: Serpentine (sometimes)	Absent. No suitable closed-cone coniferous forest, coastal scrub, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Dirca occidentalis western leatherwood	1B.2	Broadleafed upland forest, chaparral, cismontane woodland, closed-cone coniferous forest, north coast coniferous forest, riparian forest, and riparian woodland. Microhabitat: Mesic	Absent. Although the project site contains mesic areas, there are no broadleafed upland forest, chaparral, cismontane woodland, closed-cone coniferous forest, north coast coniferous forest, riparian forest, or riparian woodland habitats present on the project site. Additionally, this species was not observed during any surveys. Thus, this species is determined to be absent.
Fritillaria biflora var. *ineziana* Hillsborough chocolate lily	1B.1	Cismontane woodland, and valley and foothill grassland. Microhabitat: Serpentine	Absent. No suitable cismontane woodland, valley and foothill grassland habitat, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 surveys. Thus, this species is determined to be absent.
Hesperevax sparsiflora var. *brevifolia* short-leaved evax	1B.2	Coastal bluff scrub (sandy), coastal dunes, and coastal prairie	Absent. No suitable coastal bluff scrub, coastal dunes, or coastal prairie habitats are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Lessingia arachnoidea Crystal Springs lessingia	1B.2	Cismontane woodland, coastal scrub, valley and foothill grassland. roadsides (often) Microhabitat: Serpentine	Absent. No suitable cismontane woodland, coastal scrub, valley and foothill grassland, or serpentine soils are present on the project site. Thus, this species is determined to be absent.
Malacothamnus arcuatus var. *arcuatus*	1B.2	Chaparral and cismontane woodland	Absent. No suitable chaparral or cismontane woodland habitats are present on the project site. Additionally, this species was not

Name	Status[1]	Habitat	Potential for Occurrence on the Project site
arcuate bushmallow			observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Monolopia gracilens woodland woollythreads	1B.2	Broadleafed upland forest (openings), chaparral (openings), cismontane woodland, North Coast coniferous forest (openings), and valley and foothill grassland. Microhabitat: Serpentine	Absent. No suitable broadleafed upland forest, chaparral, cismontane woodland, North Coast coniferous forest, valley and foothill grassland, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Plagiobothrys chorisianus var. *chorisianus* Choris' popcornflower	1B.2	Chaparral, coastal prairie, and coastal scrub. Microhabitat: Mesic	Absent. Although there are mesic areas, there is no suitable chaparral, coastal prairie, or coastal scrub habitat present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Senecio aphanactis chaparral ragwort	2B.2	Chaparral, cismontane woodland, and coastal scrub. Microhabitat: Alkaline (sometimes)	Absent. No suitable chaparral, cismontane woodland, coastal scrub habitats, or alkaline soils are present on the project site. Additionally, this species was not observed during any surveys. Thus, this species is determined to be absent.
Trifolium hydrophilum saline clover	1B.2	Marshes and swamps, valley and foothill grassland (mesic, alkaline), and vernal pools	Absent. Although there are mesic areas, there is no suitable marshes and swamps, valley and foothill grassland, or vernal pools are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.
Triphysaria floribunda San Francisco owl's-clover	1B.2	Coastal prairie, coastal scrub, valley and foothill grassland. Microhabitat: Serpentine (usually)	Absent. No suitable coastal prairie, coastal scrub, valley and foothill grassland, or serpentine soils are present on the project site. Additionally, this species was not observed during the April 2021 or May 2020 surveys. Thus, this species is determined to be absent.

[1] Special-Status Species Code Designations:

FE = Federally listed Endangered

FT = Federally listed Threatened

SE = State listed Endangered

ST = State listed Threatened

1B= Rare or Endangered — Plants rare, threatened, or endangered in California and elsewhere.

2B= Rare or Endangered in California — Plants rare, threatened, or endangered in California but common elsewhere.

.1= Seriously threatened in California — Over 80% of occurrences threatened/high degree and immediacy of threat.

.2= Moderately threatened in California — 20-80% of occurrences threatened/moderate degree and immediacy of threat.

Table 4. Special-Status Animal Species, Their Status, and Potential Occurrence on the Project Site

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
Federal or State Endangered, Threatened, or Candidate Species			
Bay checkerspot butterfly (*Euphydryas editha bayensis*)	FT	Restricted to areas with shallow serpentine-derived or similar soils that have substantial populations of dwarf plantain, a primary larval host plant, and purple owl's clover, a secondary larval and adult host plant.	Absent. No suitable serpentine grassland habitat or larval host plants are present on the project site. Thus, this species is determined to be absent.
Mission blue butterfly (*Icaricia icarioides missionensis*)	FE	Coastal chaparral and coastal grasslands. Larval host plants are *Lupinus* spp.	Absent. The closest known population is located at San Bruno Mountain approximately 6.5 miles north of the project site (CNDDB 2023). No suitable chaparral or grassland habitat is present on or near the project site. Thus, this species is determined to be absent.
San Bruno elfin butterfly (*Callophrys mossii bayensis*)	FE	Coastal mountains near San Francisco Bay in the fog-belt of steep, north-facing slopes. Lives near abundant growth of broadleaf stonecrop (*Sedum spathulifolium*), its larval host plant that grows on rocky outcrops on steep north facing slopes.	Absent. All known San Bruno elfin butterfly populations are restricted to San Bruno Mountain, Milagra Ridge, the San Francisco Peninsula Watershed, and Montara Mountain. No suitable habitat or the larval host plant is present on the project site. Determine to be absent.
Callippe silverspot butterfly (*Speyeria callippe callippe*)	FE	Grasslands of the northern San Francisco Bay region. Larval host plant is *Viola pedunculata*.	Absent. Callippe silverspot butterfly populations in the project vicinity are only known to occur on San Bruno Mountain, Milagra Ridge, the San Francisco Peninsula Watershed, and Montara Mountain. No suitable habitat or the larval host plant is present on the project site. Determine to be absent.
Myrtle's silverspot butterfly (*Speyeria zerene myrtleae*)	FE	Coastal dune and prairie habitat. Larval host plants are violets, typically Viola adunca.	Absent. Although the historical distribution of this species included San Mateo County, its current extant range is believed to be restricted to the region within or near the Point Reyes National Seashore (USFWS 1998). Additionally, no suitable habitat or the larval host plant are present on the project site. Determined to be absent.
Monarch butterfly (*Danaus plexippus*)	FC	Adults forage on a wide variety of flowers for nectar and occur in a variety of habitats, but egg-laying and larval development occurs on milkweeds, which are	Absent as Breeder. The closest documented overwintering sites are located along the western coastline in San Mateo County and across the San Francisco Bay in Alameda County, approximately 10 miles west and east of the site. However, only two overwintering sites in San Mateo County have been reported to be active with very low

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
		more limited in distribution. Typically roosts on the branches and leaves of trees which receive appropriate sun exposure and thermal buffering.	numbers as of 2020, and similar low numbers were reported at the Alameda County site (Xerces Society 2020). Ostensibly suitable roosting and foraging habitat for migrants is present within the trees along the southern border and throughout the ruderal grassland. One Individual was incidentally observed at CuriOdyssey in 2017 (Rios 2017), approximately 1 mile east of the project site. No milkweed has been observed on the project site, so this species is not expected to breed here. Individuals may occur on the project site as occasional migrants, but this species is not expected to form large roosts or to breed on the site.
Western bumble bee (*Bombus occidentalis*)	SC	Meadows and grasslands with abundant floral resources.	Absent. Although the species was historically found throughout much of central and northern California (CDFW 2019b), including the project vicinity, it is not expected to occur on the site due to recent range contractions. Further, this species has not been observed in the project vicinity since the 1960s (CNDDB 2023). Determined to be absent.
Crotch bumble bee (*Bombus crotchii*)	SC	Grasslands and shrublands with abundant floral resources, undisturbed nesting and overwintering sites.	Absent. Although the species was historically found throughout much of central California and portions of northern California (CDFW 2019b), including the project vicinity, it is not expected to occur on the site due to recent range contractions. Further, this species has not been observed in the project vicinity since 1909 (CNDDB 2023). Determined to be absent.
Central California coast steelhead (*Oncorhynchus mykiss*)	FT	Cool streams with suitable spawning habitat and conditions allowing migration between spawning and marine habitats.	May be Present. Central California Coast steelhead occur in the San Francisco Bay and are known to spawn in the San Mateo Creek watershed (Spence et al. 2008, Becker and Reining 2008), and adults and yearling juveniles may be present as occasional foragers in adjacent open waters of the San Francisco Bay and Sanchez Creek. Nearest critical habitat occurs in the tributaries draining into southern South San Francisco Bay; critical habitat does not occur in the action area. This species may occasionally forage within the aquatic portions of the project site, especially during migration between marine foraging areas and freshwater spawning areas, albeit infrequently and in low numbers given the shallow nature of aquatic habitats within the study area.
Green sturgeon (*Acipenser medirostris*)	FT, CSSC	Spawns in large river systems such as the Sacramento River; forages in nearshore oceanic waters, bays, and estuaries.	May be Present. Green sturgeon occur in the San Francisco Bay between the spring and fall (Kelly et al. 2007). All tidally influenced areas of the Bay, up to the elevation of mean higher high water, have been designated as critical habitat for this species. Spawning of this southern distinct population segment occurs predominantly in the upper Sacramento River (Adams et al. 2007). Green sturgeon have

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
			been captured in the central portion of the Bay north of the San Mateo Bridge (Hieb pers. comm. 2012) in the vicinity of the project site, and may forage infrequently, and in low numbers, in the San Francisco Bay waters and Sanchez Creek adjacent to the project site. This species may occasionally forage within the aquatic portions of the project site, albeit infrequently and in low numbers given the shallow nature of aquatic habitats within the study area.
White sturgeon (*Acipenser transmontanus*)	SC, CSSC		May be Present. White sturgeon occur in the San Francisco Bay year-round. Upstream migration to spawning locations in the Sacramento and San Joaquin rivers occurs in early winter and adults return to the lower estuary in mid- to late-spring (Jackson et al. 2016, Miller et al. 2020). Although more abundant in Suisun and San Pablo Bays and the West Delta, white sturgeon have also been captured in south San Francisco Bay (Leidy 2007), and in the deep water channel adjacent to the project site (IEP 2022). This species tends to congregate in deep areas with fine-sediment substrate and is thought to move into shallow subtidal habitats to feed during high tides (Moyle 2002). White sturgeon may occasionally forage within the aquatic portions of the project site, although likely in low numbers given the relatively low catch rates in South San Francisco Bay (IEP 2022).
Longfin smelt (*Spirinchus thaleichthys*) – San Francisco Bay-Delta DPS	FE, ST	Spawns in fresh water in the upper end of the San Francisco Bay and the southern portion of the South San Francisco Bay; may occur year-round in the South Bay.	May be Present. Longfin smelt occur in the San Francisco Bay, and adults and juveniles may be present as occasional foragers in the open bay waters and Sanchez Creek, adjacent to the project site. However, these open waters do not provide suitable spawning or early (brackish) rearing habitat for this species, and it is likely that longfin smelt only occur in small numbers.
California red-legged frog (*Rana draytonii*)	FT, CSSC	Streams, freshwater pools, and ponds with emergent or overhanging vegetation. May use the undersides of old boards and other debris to rest or aestivate within riparian areas.	Absent. California red-legged frogs are known to occur approximately 4 miles north of the site in wetland habitat near the San Francisco Airport (CNDDB 2023). However, no suitable aquatic breeding or dispersal habitat is present on or surrounding the project site. Furthermore, the project site is well beyond the known dispersal capability (i.e., 2 miles) of red-legged frogs, and high-density commercial and industrial development, roadways, and Highway 101 constitute a barrier to dispersal. Thus, California red-legged frogs are determined to be absent from the project site.
San Francisco garter snake	FE, SE, SP	Prefer densely-vegetated ponds with an open water component near open hillsides where they can sun themselves, feed, and	Absent. The San Francisco garter snake occurs at very few locations in San Mateo County. The only known population of San Francisco garter snakes on the east side of the San Francisco peninsula occurs near the San Francisco International Airport, 4 miles to the northwest. No

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
(*Thamnophis sirtalis tetrataenia*)		find cover in rodent burrows (Larsen 1994, as cited in USFWS 2007). May also occupy ponds or pools in or next to streams, streams, lakes, and reservoirs. The species prefers a dense cover of vegetation, such as willows (Salix spp.), bulrushes (*Schoenoplectus* spp.), and cattails (*Typha* spp).	suitable habitat for this species is present on the project site, and the site is isolated from the nearest known remaining populations by extensive urbanization. Thus, this species is determined to be absent.
Northwestern pond turtle (*Actinemys marmorata*)	FPT, CSSC	Permanent or nearly permanent water in a variety of habitats with abundant emergent or riparian vegetation. Females lay eggs in upland habitats, in clay or silty soils in unshaded (often south-facing) areas (Jennings and Hayes 1994).	Absent. The closest known occurrence of northwestern pond turtle is located approximately 4.5 miles west of the site at Crystal Springs Reservoir and potentially suitable aquatic habitat is present approximately 1.3 miles east of the project site just south of the Coyote Point Yacht Club. However, no suitable aquatic habitat is present on the project site. Determined to be absent.
Western snowy plover (*Charadrius nivosus nivosus*)	FT, CSSC	Sandy beaches on marine and estuarine shores and salt pannes in San Francisco Bay saline managed ponds.	Absent. No suitable habitat is present on the project site. In the project vicinity, the western snowy plover is restricted to broader coastal beaches and salt panne habitat within former salt ponds. Snowy plovers may occasionally forage along the sandy shoreline of Coyote Point less than one mile east of the project site, but this species is not expected to occur on or close enough to the site to be impacted by the project. Determined to be absent from the project site.
California least tern (*Sternula antillarum browni*)	FE, SE, SP	Nests along the coast on bare or sparsely vegetated, flat substrates. In San Francisco Bay, nests primarily on an old airport runway at the former Alameda Naval Air Station. Forages for fish in open waters.	Absent as Breeder. Least terns are not known or expected to nest on or adjacent to the project site, and this species does not currently nest in the San Mateo County. Least terns forage over open water habitat off the shoreline near Coyote Point less than one mile east of the project site, and likely forage in small numbers in open water adjacent to the project site. However, no suitable nesting habitat is present on the site, and the closest known breeding colony occurs at Alameda Point, over 13 miles north of the project site.
Tricolored blackbird (*Agelaius tricolor*)	ST, CSSC	Nests near fresh water in dense emergent vegetation.	Absent as Breeder. Tricolored blackbirds typically nest in extensive stands of tall emergent herbaceous vegetation in non-tidal freshwater marshes and ponds, which are not present in the study area. This species is not known to nest in tidal habitats along the Bay, and has not been recorded nesting in the project vicinity. However, individuals

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
			could occasionally forage on site during the nonbreeding season (albeit irregularly and in low numbers).
California Ridgway's rail (*Rallus obsoletus obsoletus*)	FE, SE, SP	Salt marsh habitat dominated by pickleweed and cordgrass.	Absent. The California Ridgway's rail is resident in salt marsh habitat in San Mateo County, particularly where broader areas of well-developed tidal salt marsh are present. The species has been documented in Sanchez Marsh approximately 0.5 mile west of the site, within 3 miles southeast of the project site, and 4.75 miles north of the project site (CNDDB 2023). However, no suitable marsh habitat occurs on or adjacent to the project site. Determined to be absent.
California black rail (*Laterallus jamaicensis coturniculus*)	ST, SP	Breeds in fresh, brackish, and tidal salt marsh.	Absent. Few black rails have been observed in marshes on the east side of the San Francisco peninsula, and most records are from the nonbreeding season (CNDDB 2023, Cornell Lab of Ornithology 2021). The closest suitable nonbreeding habitat is present along the shoreline of the San Francisco International Airport, approximately 2 miles north of the project site; no suitable habitat is present on or adjacent to the site. Determined to be absent.
Burrowing owl (*Athene cunicularia*)	SC, CSSC	Nests and roosts in open grasslands and ruderal habitats with suitable burrows, usually those made by California ground squirrels (*Spermophilus beecheyi*).	Absent as Breeder. Although ostensibly suitable grassland habitat is present on site, only a small number of burrows were observed. Due to the limited amount of burrows, the small size of the site, no suitable nesting, roosting, or foraging habitat (i.e., open grasslands with abundant ground squirrel burrows) is present on the project site. However, occasional migrants may occur on the project site.
Salt marsh harvest mouse (*Reithrodontomys raviventris*)	FE, SE, SP	Diked and tidal wetlands supporting a mix of halophytic vegetation including common pickleweed, alkali heath (*Frankenia salina*), and fat hen (*Atriplex prostrata*).	Absent. The closest occurrences of the salt marsh harvest mouse were in the early 1990s approximately 8 miles south of the project site at Bair Island, and recent live-trapping documented salt marsh harvest mice in small numbers at Faber Marsh, over 14 miles south of the project site (Statham et al. 2021). The closest potential habitat is located in a small patch of wetland habitat approximately 0.5 mile southeast of the site, west of the Peninsula Humane Society, and in a small patch of wetland habitat associated with Sanchez Marsh, approximately 0.5 miles west of the project site. However, despite their proximity to the project site, the salt marsh harvest mouse is not known to occur on the San Francisco Peninsula north of the San Mateo Bridge (CNDDB 2023). Furthermore, no suitable habitat is present on the project site. Determined to be absent.
California Species of Special Concern			

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
Pacific lamprey (*Entosphenus tridentatus*)	CSSC	Occupies anadromous habitat in large streams entering the San Francisco and San Pablo Bays. Spawns in cool (shaded), clear, slow-moving rivers and streams supporting gravel, silt, and sand substrates (Moyle et al. 2015).	May be Present. In San Mateo County, the Pacific lamprey was historically documented in San Mateo Creek, approximately 2 miles southeast of the project site (Goodman and Reid 2017), but is no longer considered to be present likely due to an impassible barrier (Crystal Springs Dam). In the project vicinity, they are currently known from the Alameda Creek watershed, approximately 12 miles east of the project site (Goodman and Reid 2017). Pacific lamprey adults may infrequently forage in open Bay waters and Sanchez Creek adjacent to the site, but no suitable spawning habitat is present on the project site or immediately adjacent to the project site. May be present in adjacent open water habitat.
Central Valley Fall-Run Chinook Salmon (*Oncorhynchus tshawytscha*)	CSSC	Cool rivers and large streams that reach the ocean and that have shallow, partly shaded pools, riffles, and runs.	May be Present. Central Valley fall-run Chinook salmon occur in the San Francisco Bay, and small numbers of juveniles or fall-run adults may be present as occasional foragers in the open waters and Sanchez Creek adjacent to the project site. However, no suitable spawning habitat for this species is present on or adjacent to the project site. This species may occasionally forage within the aquatic portions of the project site, especially during migration between marine foraging areas and freshwater spawning areas, albeit infrequently and in low numbers given the shallow nature of aquatic habitats within the study area.
Northern harrier (*Circus cyaneus*)	CSSC (nesting)	Nests in marshes and moist fields, forages over large open areas.	Absent as Breeder. May occasionally forage on the site, but no suitable nesting habitat is present on or adjacent to the project site. Determined to be absent.
Long-eared owl (*Asio otus*)	CSSC (nesting)	Frequents dense riparian and live oak thickets near meadow edges, and nearby woodland and forest habitats, but also may be found in dense conifer stands at higher elevations. This species forages over open areas, where it hunts for rodents and small birds. Breeds from valley foothill hardwood up to ponderosa pine habitats from early March to late July.	Absent. This species is not expected to visit or breed on the project site or in the nearby vicinity of the site. Determined to be absent.

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
Vaux's swift (*Chaetura vauxi*)	CSSC (nesting)	Nests in snags in coastal coniferous forests or, occasionally, in chimneys; forages aerially.	Absent as Breeder. No suitable nesting habitat is present on or in the vicinity of the site. However, this species forages over the site during migration.
Olive-sided flycatcher (*Contopus cooperi*)	CSSC (nesting)	Breeds in mature forests with open canopies, along forest edges in more densely vegetated areas, in recently burned forest habitats, and in selectively harvested landscapes (Altman and Sallabanks 2000, Robertson and Hutto 2007).	Absent as Breeder. No suitable nesting habitat is present on the site or in the vicinity of the site. Occurs as an occasional spring and fall migrant.
San Francisco common yellowthroat (*Geothlypis trichas sinuosa*)	CSSC	Nests in herbaceous vegetation, usually in wetlands or moist floodplains.	Absent as Breeder. No nesting habitat is present on or immediately adjacent to the site. Potential nesting habitat is present in wetland areas at the far western corner of Coyote Point Recreation Area and in Sanchez Marsh approximately 0.30 mile southeast and 0.75 mile west of the project site, respectively. May occur as a scare nonbreeding visitor on the site.
Yellow warbler (*Setophaga petechia*)	CSSC (nesting)	Nests in riparian habitat, especially that dominated by cottonwoods, willows, and sycamores.	Absent as Breeder. No suitable nesting habitat is present on or adjacent to the site. Occurs as a common spring and fall migrant.
Alameda song sparrow (*Melospiza melodia pusillula*)	CSSC	Nests in salt marsh, primarily in marsh gumplant and cordgrass along channels.	Absent as Breeder. No nesting habitat is present on or immediately adjacent to the site. Potential nesting habitat is present in wetland areas at the far western portion of Coyote Point Recreation Area and in Sanchez Marsh approximately 0.30 southeast and 075 mile west of the project site, respectively. May occur as a scare nonbreeding visitor on the site.
Bryant's savannah sparrow (*Passerculus sandwichensis alaudinus*)	CSSC	Nests in pickleweed dominant salt marsh and adjacent ruderal habitat.	Absent as Breeder. Ruderal grassland is present on the site, but it is surrounded by development, and is isolated from salt marsh habitats in the site vicinity, so the species is not expected to breed on or immediately adjacent to the site. May occur as a scare nonbreeding visitor on the site.
Pallid bat (*Antrozous pallidus*)	CSSC	Forages over many habitats; roosts in caves, rock outcrops,	Absent. Historically, pallid bats were likely present in a number of locations throughout the project region, but their populations have declined in recent decades. This species has been extirpated as a

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
		buildings, and tree crevices or cavities.	breeder from urban areas close to the Bay, and is not expected to occur on the project site. Additionally, no suitable crevice-roosting habitat was observed during the reconnaissance field survey. Determined to be absent.
Townsend's big-eared bat (*Corynorhinus townsendii*)	CSSC	Roosts in caves, mine tunnels, and occasionally in deep crevices in trees such as redwoods or in abandoned buildings, in a variety of habitats.	Absent. No known extant populations of the Townsend's big-eared bat occur in the site vicinity, and no suitable cavernous roosting habitat is present on the project site. Determined to be absent.
Western red bat (*Lasiurus blossevillii*)	CSSC	Roosts in foliage in forest or woodland habitat, especially in or near riparian habitat.	Absent as Breeder. This species may occur as a migrant and winter resident, but does not breed in the Bay Area. Small numbers of bats may occasionally roost within foliage of trees on the project site, but due to the absence of riparian habitat on or in the vicinity of the site, the potential for occurrence is extremely low.
San Francisco dusky-footed woodrat (*Neotoma fuscipes annectens*)	CSSC	Nests in a variety of habitats including riparian areas, oak woodlands, and scrub.	Absent. No woodrat stick nests were observed on the project site. Do to the heavily urbanized nature of the surrounding areas this species does not likely occur on the project site. Determined to be absent.
Salt marsh wandering shrew (*Sorex vagrans halicoetes*)	CSSC	Medium-high marsh 6-8 feet above sea level with abundant driftwood and common pickleweed.	Absent. This species is likely present in broader salt and brackish marshes along the Bay, although its distribution is poorly known. There is a low probability of occurrence in the marsh habitat approximately 2 miles northwest of the site near the San Francisco Airport and 2.75 miles southeast of the site near Mariner's Point. However, there is no suitable habitat on the site. Thus, the species is determined to be absent.
California Fully Protected Species			
White-tailed kite (*Elanus leucurus*)	SP	Nests in tall shrubs and trees, forages in grasslands, marshes, and ruderal habitats.	Absent as Breeder. The white-tailed kite may forage over the ruderal grassland habitat on occasion, but there are no sufficiently extensive open areas on the project site to support breeding.
Other Special-Status Species			
Pacific herring (*Clupea pallasii*)	CEQA	Spawns in sheltered areas of bays, estuaries, and harbors, and sometimes in nearshore coastal waters. May spawn in intertidal or subtidal waters on manmade structures such as pier pilings and riprap (Watters et al. 2004).	May be Present. Potentially suitable spawning habitat is present on existing riprap in the intertidal habitat along the north and east sides of the project site. Pacific herring have been documented on riprap in intertidal areas in the San Francisco Bay (CDFW 2015). The closest known spawning sites are located approximately 1 mile east of the site at Coyote Point and approximately 8 miles north of the project site at Candlestick Point (CDFW 2019a). Therefore, this species could

Name	Status[1]	Habitat	Potential for Occurrence on the Project Site
			potentially spawn on riprap, and forage, within the aquatic/intertidal portions of the project site.
Olympia oyster (*Ostrea lurida*)	CEQA	Attaches to hard substrates such as rocks, and artificial structures in intertidal habitats of the San Francisco Bay. May also occur in subtidal habitats.	May be Present. Potentially suitable habitat exists on the riprap shoreline on the north and east sides of the project site. Known to occur at Oyster Point Marina approximately 1 mile south of the project site (Subtidal Goals Project 2010). No obvious/large occurrences were observed on the project site, but the species could potentially be present.
California sea lion (*Zalophus californianus*)	MMPA	Occurs in shallow waters along the eastern North Pacific Ocean and in portions of the San Francisco Bay. Prefers sandy beaches, rocky shorelines, and floating docks.	May be Present. Does not breed in the Project region, but occurs as a common resident of the San Francisco Bay year-round. Small numbers may forage in adjacent open waters and in Sanchez Creek. However, no pupping sites or suitable haul-out sites are present on or adjacent to the project site.
Pacific harbor seal (*Phoca vitulina richardsi*)	MMPA	Throughout the northern Atlantic and Pacific Oceans along coastal waters, river mouths, and bays.	May be Present. Harbor seals are permanent residents of the San Francisco Bay. Individual harbor seals may occasionally forage in the adjacent open waters and Sanchez Creek. However, no pupping sites or suitable haul-out sites are present on or adjacent to the project site.

[1] Special-Status Species Code Designations:

FE = Federally listed Endangered

FT = Federally listed Threatened

FC = Federal Candidate for listing

FPE = Federally Proposed Endangered

FPT = Federally Proposed Threatened

SE = State listed Endangered

ST = State listed Threatened

SC = State Candidate for listing

CSSC = California Species of Special Concern

SP = State Fully Protected Species

MMPA = Marine Mammal Protection Act

CEQA = Species not currently protected by statute or regulation, but considered rare, threatened, or endangered under Section 15380 of the CEQA Guidelines.

DPS = Distinct Population Segment

No suitable aquatic habitat to support special-status fish and marine mammal species is present in the terrestrial portions of the project site. However, the open waters of the San Francisco Bay and Sanchez Creek immediately adjacent to the site (e.g., within areas where project activities will occur within tidal waters) provide potential foraging habitat for the Central California Coast steelhead, green sturgeon, white sturgeon, longfin smelt, Pacific lamprey (*Entosphenus tridentatus*), Central Valley fall-run Chinook salmon, California sea lion, and Pacific harbor seal.

The monarch butterfly is not known to breed or overwinter on the project site or in the nearby vicinity, but it could occasionally forage in the area and roost on the trees on site during their fall and spring migration. Pacific herring spawn within one mile of the site at Coyote Point and elsewhere in the San Francisco Bay (CDFW 2019a), and potentially suitable spawning habitat is present on concrete debris on the north and east perimeter of the project site. The Olympia oyster (*Ostrea lurida*) occurs throughout the San Francisco Bay, and potentially suitable habitat is present in the concrete debris shoreline habitat on the north and east portions of the site.

5.3 Sensitive Natural Communities, Habitats, and Vegetation Alliances

Natural communities have been considered part of the Natural Heritage Conservation triad, along with plants and animals of conservation significance, since the state inception of the Natural Heritage Program in 1979. CDFW determines the level of rarity and imperilment of vegetation types and tracks sensitive communities in its Rarefind database (CNDDB 2023). Global rankings (G) of natural communities reflect the overall condition (rarity and endangerment) of a habitat throughout its range, whereas state (S) rankings reflect the condition of a habitat within natural communities and are defined using NatureServe's standard heritage program methodology as follows (Faber-Langendoen et al. 2012):

- G1/S1: Critically imperiled
- G2/S2: Imperiled
- G3/S3: Vulnerable
- G4/S4: Apparently secure
- G5/S4: Secure

In addition to tracking sensitive natural communities, CDFW also ranks vegetation alliances, defined by repeating patterns of plants across a landscape that reflect climate, soil, water, disturbance, and other environmental factors (Sawyer et al. 2009). If an alliance is marked G1–G3, all of the vegetation associations within it will also be of high priority (CDFW 2021). CDFW provides VegCAMP's currently accepted list of vegetation alliances and associations (CDFW 2021). Impacts on CDFW sensitive natural communities, vegetation alliances/associations, or any such community identified in local or regional plans, policies, and regulations, must be considered and evaluated under CEQA (Title 14, Division 6, Chapter 3, Appendix G of the California Code of Regulations). Furthermore, aquatic, wetland and riparian habitats are also protected

under applicable federal, state, or local regulations, and are generally subject to regulation, protection, or consideration by USACE, RWQCB, CDFW, and/or USFWS.

5.3.1 Sensitive Natural Communities

A query of sensitive habitats in the CNDDB (2023) identified five sensitive natural communities as occurring within the twelve 7.5-minute USGS quadrangles containing or surrounding the project site: (1) northern coastal salt marsh (Rank G3/S3.2), (2) northern maritime chaparral (Rank G1/S1.2), (3) serpentine bunchgrass (Rank G2/S2.2), (4) valley needlegrass grassland (Rank G3/S3.1), and (5) valley oak woodland (Rank G3/S2.1). Northern coastal salt marsh is characterized by Holland (1986) as occurring along sheltered inland margins of bays, often co-dominated by pickleweed (*Salicornia* spp.), cordgrass, and sometimes saltgrass (*Distichlis spicata*). Because the open water/muted tidal channel on the project site lacks vegetation, and does not contain pickleweed, northern coastal salt marsh is considered absent. Northern maritime chaparral is dominated by low, dense shrubs, including species of manzanita (*Arctostaphylos* spp), and coyote brush (*Baccharis pilularis*). Northern maritime chaparral, serpentine bunchgrass, valley needlegrass grassland, and valley oak woodland are also all absent from the project site.

5.3.2 Sensitive Vegetation Alliances

The ruderal grassland comprising the majority of the site is dominated by wild oats (*Bromus* sp.) and fennel and would be considered a "Wild oats and annual brome grasslands (*Avena* spp. – *Bromus* spp.)" alliance (CDFW 2021). This alliance does not have a global or state ranking, but because it is defined by dominance of nonnative species, it is not considered sensitive by VegCAMP. The seasonal wetlands throughout the ruderal grassland dominated by Italian rye grass, and intermixed with Mediterranean barley, bristly ox-tongue, and curly dock), and most closely aligns with the *Lolium perenne* herbaceous semi-natural alliance (CDFW 2021). This alliance is not ranked and thus, is not considered sensitive by VegCAMP.

5.3.3 Sensitive Habitats (Wetlands and Waters of the U.S./State)

A total of 0.40 acre of seasonal wetlands were mapped and verified by USACE within the project site. In addition, areas of open water below the HTL along the San Francisco Bay and Sanchez Creek would be considered Waters of the U.S. and state as described above under Section 3.1.1 and 3.2.1. Additionally, CDFW would claim Sanchez Creek as jurisdictional under §1602 of the CFGC.

5.3.4 Eelgrass Beds

Eelgrass beds form areas of important habitat for birds, fish, and crustaceans and are one of the preferred spawning habitats of pacific herring (Wyllie-Echeverria and Fonseca 2003). These plants also support grazing crustaceans, shrimp, and amphipods. Because it requires light for photosynthesis, eelgrass is limited by water clarity to depths of about six feet or less. Eelgrass beds and patches occur in both subtidal and intertidal areas of the San Francisco Bay. Low intertidal and shallow subtidal areas within the bay adjacent to the project site appear to provide potentially suitable substrate conditions and depths to support eelgrass below the toe of the existing shoreline protection.

The eelgrass survey conducted by Merkel & Associates, Inc. in April and May 2021, and as described in Appendix C, did not detect any eelgrass within a 45-meter buffer extending bayward from the project boundary. Eelgrass was mapped in relatively low abundance approximately 1,600 feet east of the project area in 2014 (Merkel & Associates, Inc. 2015) and a small, isolated patch was observed approximately 1,000 feet west of the project area in 2009 but this isolated patch was not present in Bay wide surveys conducted in 2014 (Merkel & Associates, Inc. 2009, 2015). Areas where eelgrass has been found in the project vicinity have slightly different degrees of wave exposure relative to the project site's shoreline. Observations of wind-wave conditions during the April 30th mapping flights along with visual evidence of substantial shoreline wave-induced scour suggest that the Bay shoreline along the project site is subject to substantial hydrodynamic energy, which may limit eelgrass from becoming established in areas where substrate conditions and depths appear otherwise favorable. Within the lower portions of Sanchez Creek, the existing shoreline revetment creates near vertical side slopes along the tidally-influenced margins of the channel, with rock and rubble embedded in a matrix of finer-grained substrate in lower intertidal and shallow subtidal areas of the channel. Given the channel's entrenched geometry, hardened banks, and evidence of scour in the lower portion of the channel within the project reach, it is likely that the distribution of shear stress across the channel bottom precludes eelgrass establishment in areas where depth and substrate conditions might otherwise be suitable. Further, in reviewing available aerial imagery and based on observations made during the eelgrass survey, it appears that Sanchez Creek experiences persistently elevated turbidity relative to the adjacent, open bay waters, which suggests that light limitation may be an additional constraining factor with respect to eelgrass occurrence within this portion of the project site.

5.3.5 EFH

As discussed in Section 3.1.4, the intertidal and subtidal habitats, within and adjacent to the project site are considered EFH by NMFS. EFH is habitat that is essential to the long-term survival and health of a fishery and includes those habitats that support all life stages and all habitats that support breeding, spawning, feeding, and growth to maturity of a managed species. The San Francisco Bay has been designated EFH for three FMPs within the project vicinity: the Pacific Coast Groundfish, Coastal Pelagic Species, and Pacific Coast Salmon. Of the 89 species federally managed under these plans, the following thirteen are expected to occur in the South-Central Bay (i.e., from the Bay Bridge south to San Mateo Bridge) based on NMFS's evaluation of FMP species distributions in San Francisco, San Pablo, and Suisun Bays (NMFS 2013). These are the northern anchovy and Pacific sardine of the Coastal Pelagic FMP; leopard shark, soupfin shark (*Galeorhinus galeus*), spiny dogfish (*Squalus acanthias*), big skate (*Raja binoculata*), lingcod (*Ophiodon elongatus*), brown rockfish (*Sebastes auriculatus*), English sole, sand sole (*Psettichthys melanostictus*), starry flounder, cabezon (*Scorpaenichthys marmoratus*) of the Pacific Groundfish FMP; and Chinook salmon of the Pacific Coast Salmon FMP. Additionally, all areas of the San Francisco Bay that support beds of Olympia oyster are also considered EFH because they improve water quality and increase fish abundance.

Section 6.0 Impacts and Mitigation Measures

The State CEQA Guidelines provide direction for evaluating the impacts of projects on biological resources and determining which impacts will be significant. CEQA defines a "significant effect on the environment" as "a substantial adverse change in the physical conditions which exist in the area affected by the proposed project." Under State CEQA Guidelines Section 15065, a project's impacts on biological resources are deemed significant if the project would:

A. "substantially reduce the habitat of a fish or wildlife species"

B. "cause a fish or wildlife population to drop below self-sustaining levels"

C. "threaten to eliminate a plant or animal community"

D. "reduce the number or restrict the range of a rare or endangered plant or animal"

In addition to the Section 15065 criteria that trigger mandatory findings of significance, Appendix G of State CEQA Guidelines provides a checklist of other potential impacts to consider when analyzing the significance of project effects. The impacts listed in Appendix G of State CEQA Guidelines may or may not be significant, depending on the level of the impact. For biological resources, these impacts include whether the project would:

A. "have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

B. "have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service"

C. "have a substantially adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling hydrological interruption, or other means)"

D. "interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites"

E. "conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance"

F. "conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan"

6.1 Impacts on Special-Status Species

Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS (less than significant with mitigation)

6.1.1 Impacts on Common Species and Habitats

The project will impact the entirety of the 5.88 acres of upland ruderal grassland habitat and the majority of the approximately 3 acres of developed habitat on the project site by converting the site to restored tidal marsh, upland ecotone, landscaped park, and developed land cover types (Figure 6). Ruderal grassland and developed habitats are abundant and widespread regionally, and are not particularly sensitive or valuable (from the perspective of providing important plant or wildlife habitat). Therefore, impacts on these habitats would be minimal.

As described in Section 4.0, numerous common plant and wildlife species occupy the project site. Common wildlife includes a number of species of invertebrates, birds, and mammals (terrestrial and aquatic). Common plant communities include ruderal annual grassland and landscaped areas with ornamental plants. Common terrestrial species and habitats would be affected through the removal of trees and vegetation, habitat restoration, construction of shoreline amenities, education center construction, trail and road construction and landscaping. However, those common plant and animal species that occur on the site are regionally abundant and are present in widely available habitats in the region. As a result, the project would impact only a very small proportion of their regional populations. Furthermore, once the project is completed, the site will support higher quality habitat and many of those species that occupy the site now will occupy the site after construction. Thus, the project's impact on common species and habitats would not be substantial, and any impacts of the project on common species and habitats would have a negligible effect on regional populations.

6.1.2 Impacts on Special-Status Plants (No Impact)

As discussed in Section 5.1 above, no special-status plant species are expected to occur within the project site. As a result, no impacts to special-status plants are expected to occur from construction of the project.

6.1.3 Impacts on Special-Status Fish, Designated Critical Habitat, EFH, and Marine Mammals during In-Water Work

Construction work in aquatic habitats below the HTL along the bay shoreline (also referred to as in-water work) would be done using sheet pile coffer dams and dewatering to prevent ingress of Bay waters. Shoreline treatments in aquatic habitats would temporarily impact species-status fish/marine mammals, critical habitat, and EFH. Work in tidal aquatic habitats would include construction of the kitesurfing ramp, bay overlook/access, tidal inlet, water rescue/kayak ramp and the northeastern shoreline repairs. The project would place fill and thereby impact up to 0.35 acres of aquatic habitat below the HTL: concrete fill for water access ramps and rocky intertidal fill/living shoreline enhancement for erosion protection (Figure 6).

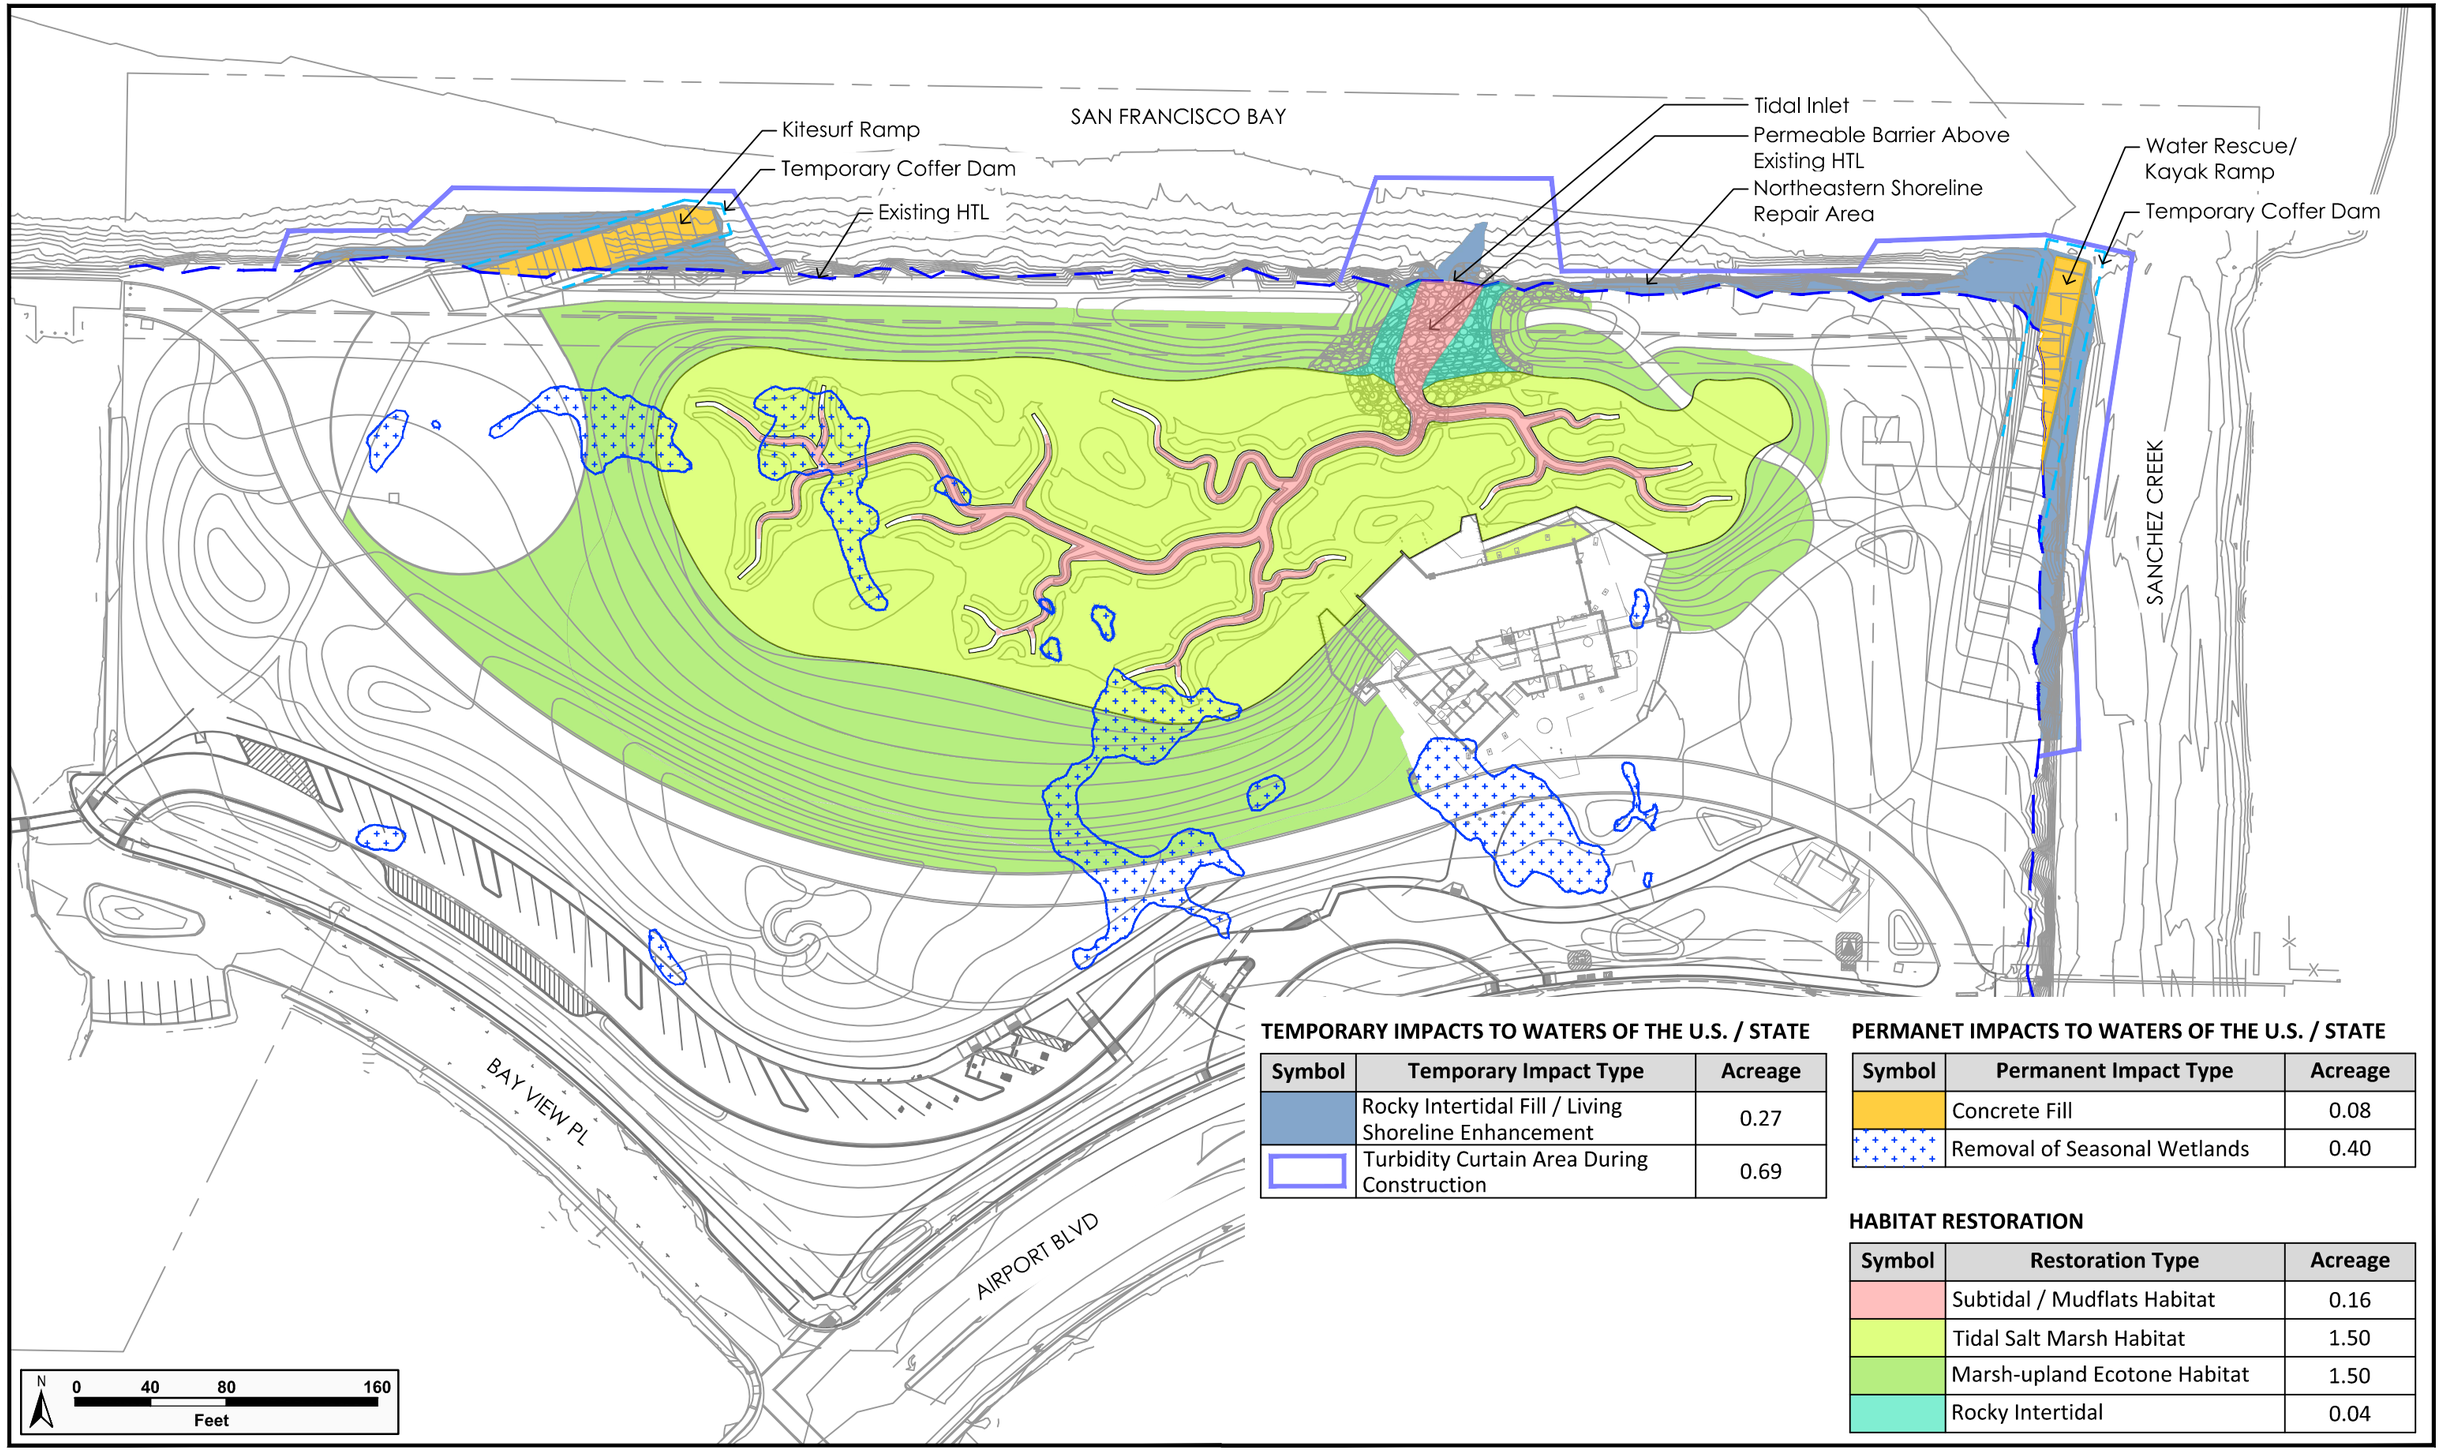
These shoreline treatments would result in up to 0.08 acres of permanent impacts to existing aquatic habitat below the HTL via installation of concrete water access ramps that would be frequently utilized by people for water access; this is denoted as "concrete fill" on Figure 6. The installation of the kitesurfing and water rescue/kayak ramps would impact the nearshore habitat long-term by creating permanent shading during high tides. In addition, up to 0.27 acres of aquatic habitat below the HTL would be temporarily impacted via removal of concrete debris and replacement with imported hard substrate (e.g., rip rap) which would include living shoreline habitat enhancement design elements below the HTL; this is depicted on Figure 6 as rocky intertidal fill/living shoreline enhancement. The rocky intertidal fill/living shoreline enhancement areas would be designed to replace anthropogenic concrete debris with hard substrate that will facilitate rapid colonization by hard substrate macroalgae and invertebrates below MHW and marsh vegetation (in rock-crown treatments) above MHW.

The project would also result in 0.69 acre of temporary impacts during construction on aquatic habitat within a turbidity curtain area placed around the in-water work areas. This would result in temporary fish exclusion and potential removal of concrete debris from the Bay floor for construction access in aquatic habitats (Figure 6).

The project would benefit the essential elements of critical habitat for green sturgeon and key elements of EFH (i.e., food resources and water quality) through the installation of living shoreline elements into rock slope protection at the tidal inlet, kitesurfing ramp, and water rescue/kayak access ramp within portions of the new hard structures (e.g., riprap). Therefore, the project would not result in a net loss of critical habitat or EFH. Thus, no compensatory mitigation for these resources is necessary. However, temporary impacts on aquatic habitat could impact special-status fish, critical habitat, EFH, and marine mammals, such as the California sea lion and harbor seal.

6.1.3.1 Construction Work in Shallow Bay Waters

All work would occur in relatively shallow waters that are unlikely to support foraging special-status fish and marine mammals. Still, NMFS has considered the entire San Francisco Bay in the site vicinity to be designated critical habitat for the green sturgeon. Thus, the temporary impacts associated with the proposed shoreline treatments may result in impacts to green sturgeon critical habitat, and possibly individuals of these species, as well as other special-status fish such as white sturgeon, Central Valley Fall-Run Chinook salmon, longfin smelt, and Pacific herring. Additionally, shoreline treatments may result in temporary impacts on designated EFH. For example, construction of the kitesurfing ramp, tidal inlet, and water rescue/kayak ramp may require temporary fish exclusion and the removal of existing debris from the Bay floor for construction. Fish exclusion would likely be achieved through installation of a turbidity curtain to separate the work area from the broader Bay. Temporary impacts to special-status fish, critical habitat and EFH would occur through direct disturbance of individuals of special-status species, loss of or modification of intertidal and subtidal aquatic habitats where special-status fish may forage, increased turbidity during construction, and potential mobilization of chemicals or contaminants from equipment during construction which could result in injury or mortality of fish in the vicinity of construction.



TEMPORARY IMPACTS TO WATERS OF THE U.S. / STATE

Symbol	Temporary Impact Type	Acreage
	Rocky Intertidal Fill / Living Shoreline Enhancement	0.27

Ecological Consultants

Figure 6: Impacts to Waters of the U.S. / State
Bay Rise Park - Biological Resources Report (4113-02)
December 2024

Although critical habitat and EFH that would be temporarily impacted by construction of the project represents a minute fraction of available EFH in the Bay, this impact would be significant, in the absence of mitigation, due to the importance of critical habitat to green sturgeon, and EFH to the ecology of the San Francisco Bay. Implementation of MM BIO-1 (Worker Environmental Awareness Training) and MM BIO-2 (Erosion and Sedimentation Control) would minimize any adverse effects on aquatic habitat of special-status fish, including designated critical habitat for the green sturgeon, during construction. These mitigation measures would also minimize impacts on marine mammals.

Additionally, construction activities may result in injury or mortality of small numbers of individuals of special-status fish because of stranding during turbidity curtain and coffer dam installation, or increased turbidity while fish are present. Although fish exclusion would be performed in coordination with the turbidity curtain placement in aquatic areas in accordance with the mitigation measures below, there is also potential for injury or mortality of fish if they cannot be excluded entirely from the work area, and physical handling and relocation become necessary.

Implementation of the below mitigation measures (MM BIO-1, MM BIO-2, MM BIO-3, MM BIO-4, MM BIO-5, and MM BIO-6) will adequately minimize potential impacts on special-status fish during fish exclusion activities.

6.1.3.2 Impacts to Aquatic Species That are Prey for Fish

Benthic macroinvertebrates and other marine organisms that are prey for many fishes might be killed or their abundance reduced during work in-water work. However, the effect on prey species resulting from the in-water work would be temporary because construction activities would be short-lived and the construction area is relatively small relative to amount of available prey in the surrounding bay waters. Thus, the loss of aquatic prey species because of in-water work activities is not expected to adversely affect special-status fish. Further, these species are expected to recolonize impact areas once the project is complete.

Implementation of the following mitigation measures will adequately reduce project impacts on individual special-status fish, designated critical habitat for fish, EFH, and marine mammals (aside from pile driving, discussed in Section 6.1.4 below).

6.1.3.3 MM BIO-1: Worker Environmental Awareness Training

Personnel involved in in-water construction and deconstruction activities shall be trained by a qualified biologist (experienced in construction monitoring, as approved by the City/Agency) in the importance of the marine environment to special-status fish, birds, and marine mammals and the environmental protection measures put in place to prevent impacts to these species, their habitats, and EFH. The training shall include, at a minimum, the following:

- A review of the special-status fish, birds, and marine mammals and sensitive habitats that could be found in work areas
- Measures to avoid and minimize adverse effects to special-status fish, birds, marine mammals, their habitats, and EFH
- A review of all conditions and requirements of environmental permits, reports, and plans (i.e., USACE permits)

6.1.3.4 MM BIO-2: Erosion and Sedimentation Control

During construction, the project shall employ standard construction best management practices (BMPs) to treat and minimize runoff. The project will also obtain a 401 Water Quality Certification from the RWQCB, which may contain additional measures to ensure protection of water quality. Construction BMPs shall be reviewed and coordinated with RWQCB, as necessary, for implementation during work and may include but are not limited to the following:

- For impacts to tidal habitats:
    - Install temporary sediment turbidity curtains around the worksite to minimize sediment transport, and/or
    - To the extent practicable, work only during periods of slack tide (minimal current) and low wind to minimize transport of sediment laden water.
    - All dewatering systems and discharge protocols will be reviewed and pre-approved to comply with regulatory standards prior to operation on-site.
- Sediment mitigation measures shall be in place prior to the onset of project construction and shall be monitored and maintained until construction activities have been completed. Temporary stockpiling of excavated or imported material shall occur only in approved construction staging areas. Excess excavated soil shall be disposed of at a regional landfill or at another approved and/or properly permitted location. Stockpiles that are to remain on the site throughout the wet season shall be protected to prevent erosion.
- No litter, debris, or sediment shall be dumped into storm drains. Daily trash and debris removal shall occur at the site.
- Equipment staging and parking of vehicles shall occur on established access roads and flat surfaces.
- The integrity and effectiveness of construction fencing and erosion control measures shall be inspected on a daily basis. Corrective actions and repairs shall be carried out immediately for fence breaches and ineffective BMPs.
- Fueling, washing, and maintenance of vehicles shall occur in developed habitat, away from the San Francisco Bay and Sanchez Creek. Equipment shall be regularly maintained to avoid fluid leaks. Any

leaks shall be captured in containers until equipment is moved to a repair location. Hazardous materials shall be stored only within the developed habitat. Containment and cleanup plans shall be prepared and put in place for immediate cleanup of fluid or hazardous materials spills.

- At no time shall sediment-laden water be allowed to enter the San Francisco Bay and Sanchez Creek.
- All litter and construction debris shall be disposed of off-site in accordance with state and local regulations. All trash and debris within the work area shall be placed in containers with secure lids before the end of work each day in order to reduce the likelihood of predators being attracted to the site by discarded food wrappers and other rubbish that may be left on-site. If containers meeting these criteria are not available, all rubbish shall be removed from the project site at the end of each work day.
- Absorbent materials designated for spill containment and clean-up activities shall be available on site for use in an accidental spill.
- Upon completion of in-water work activities, any turbidity curtains shall be removed in a manner that would allow flow to resume with the least disturbance to the substrate.

6.1.3.5 MM BIO-3: Seasonal Restrictions

In-water work shall be avoided during the seasonal period when juvenile salmonids are moving through the estuary on the way to the ocean or when groundfish and prey species could be directly impacted. Because steelhead are potentially present, in-water work shall be conducted between June 1 through November 30, based on the standard work windows for steelhead and Pacific herring. All in-water construction, including installation of turbidity curtains, sheet piles/coffer dams and steel pipe piles, shall occur during this window. Construction will be limited to daylight hours only. If completion of in-water work within this period is not feasible due to scheduling issues, new timing guidelines shall be established and submitted to NMFS and CDFW for review and approval.

6.1.3.6 MM BIO-4: Fish Exclusion at Turbidity Curtain Sites

Fish shall be excluded from the work area prior to in-water work. Construction of the water rescue/kayak ramp, kitesurfing ramp, and tidal inlet will be initiated at low tide. Prior to initiating work, qualified biologists shall use a block net to encourage fish to leave the work area. The net will be moved from the shore, moving out and away from the work area. Once fish have moved out of the area, the turbidity curtains will be installed around this work area. The turbidity curtains would be removed after sediments have settled, and the work is completed.

6.1.3.7 MM BIO-5: Fish Relocation

If fish cannot be excluded entirely from areas where turbidity curtains will be employed, qualified biologists shall relocate the remaining fish outside the work area using seine nets, dip nets, or other means. The method of relocation will be determined by the qualified biologist, in consultation with NMFS (and CDFW as necessary)

and consistent with methods described in the *California Salmonid Stream Habitat Restoration Manual, Fourth Edition* (Flosi et al. 2010) and *NOAA Restoration Center's Programmatic Approach to ESA/EFH Consultation Streamlining for Fisheries Habitat Restoration Projects* (Pecharich 2017), based on site conditions and species present. A Fish Rescue and Relocation Plan will be prepared and will provide at a minimum the following items:

- Qualifications of the fish rescue team: only fisheries biologists that are approved by USFWS and NMFS and permitted by CDFW under a California Endangered Species Act (CESA) Memorandum of Understanding (MOU) shall handle and relocate CESA-listed species
- Schedule and description of proposed fish relocation techniques
- Measures implemented to minimize injury and mortality of listed species and other native aquatic species during fish relocation and dewatering activities, as described in Volume II Part IX, pages 52 and 53 of the *California Salmonid Stream Habitat Restoration Manual*
- Timeline of data availability and reporting requirements to NMFS, CDFW, and USFWS

The Fish Rescue and Relocation Plan will be submitted to CDFW, NMFS, and USFWS for review and approval no later than 60 days prior to conducting in-water work, or as specified in permit conditions. Fish exclusion due to turbidity curtains and relocation shall be confirmed prior to any in-water construction, including installation of sheet piles/coffer dams and steel pipe piles.

6.1.3.8 MM BIO-6: Biological Monitoring

A qualified biologist shall monitor construction of all in-water work along the bay shoreline to ensure that no fish are remaining in the work area and that no marine mammals or fish move into the work area. If fish or marine mammals are observed within the work area, the monitor shall direct the contractor to wait until the animals leave the area or pause work if animals move into the area.

6.1.4 Impacts on Marine Mammals and Fish during Pile Driving (Less than Significant with Mitigation)

The project may install permanent piles for the water rescue/kayak ramp in Sanchez Creek, the boardwalk/overlook, and at the kitesurf ramp. The water rescue/kayak ramp will require approximately 20 steel pipe piles, the boardwalk/overlook will require approximately 3 steel pipe piles, and the kitesurf ramp will require approximately 9 steel pipe piles (see Table 2). All steel pipe piles to be installed will be 24-in diameter; it is estimated that six of the piles at the water rescue/kayak ramp and five at the kitesurfing ramp will be in-water (in Bay-saturated soils), the remaining 22 will be land-based. The project may also install temporary or permanent sheet pile walls along the edge of the project site on the bay side to allow for construction of the water rescue ramp and the marsh. Because there is some potential for special-status and sensitive fish, as well as marine mammals, to be present in the open waters adjacent to the project, these species may be impacted by in-water noise generated by these activities. Sounds generated by percussive pile driving have the potential to affect fish in several ways, ranging from the alteration of behavior to physical injury or mortality depending on the intensity and characteristics of the sound, the distance and location of the fish in the channel relative to the

sound source, and the size and species of fish involved (Yelverton et al. 1975 as cited in Hastings and Popper 2005, Molnar et al. 2020). The Fisheries Hydroacoustic Working Group (FHWG) has developed agreed-upon injury threshold criteria for listed fish species (FHWG 2008). The FHWG identified sound pressure levels of 206 dB-peak (peak decibels) at 10 meters (m) as being injurious to fish. Accumulated sounds exposure levels (SEL) at 10 m of 187 dB for fishes that are greater than 2 grams (g), and 183 dB for fishes below that weight, are considered to cause temporary shifts in hearing, resulting in temporarily decreased fitness (i.e., reduced foraging success, reduced ability to detect and avoid predators) (FHWG 2008). It is highly unlikely that listed salmonids and sturgeon weighing less than 2 g will be present in the project area during construction, but juvenile longfin smelt may be present.

Likewise, sounds generated by percussive pile driving have the potential to affect marine mammals in several ways, ranging from the alteration of behavior to physical injury or mortality depending on the intensity and characteristics of the sound, the distance and location of the animal relative to the sound source, and the size and species of animal involved. Current NMFS practice regarding exposure of marine mammals to high-level sounds is that mid-frequency cetaceans and phocid pinnipeds exposed to impulsive sounds of 185 SEL or above, have the potential to be injured (i.e., Level A harassment; NMFS 2023). NMFS (2023) considers the potential for behavioral (Level B) harassment to occur when marine mammals are exposed to sounds below injury thresholds but at or above 160 dB Root-Mean-Square (RMS) threshold for impulse sounds (e.g., impact pile driving) and 120 dB RMS threshold for continuous noise (e.g., vibratory pile driving).

Due to the small number of piles being installed, the duration of this activity is expected to be short. Further, the project is likely to use vibratory hammers when driving piles if feasible, which should minimize noise levels (compared to the use of impact hammers). However, there is the potential that during vibratory pile driving resistant subsurface sediment layers could be encountered, which would result in the piling refusing to go deeper. Pre-construction geotechnical surveys revealed dense clays underneath softer fill material and bay mud (Langan 2022), making this scenario likely. The contractor would then be required to utilize an impact hammer to finish setting the piling. Implementation of MM BIO-1, MM BIO-3, and MM BIO-7 will reduce potential noise impacts resulting from in-water work to less-than-significant levels.

6.1.4.1 Mitigation Measure BIO-7: Noise Impact Minimization

To minimize impacts on fish and marine mammals, the Project Applicant shall implement the following measures to reduce the magnitude of pressure waves generated by pile driving.

1. All in-water work shall be conducted between June 1 and November 30.
2. To the extent feasible, all piles shall be installed with a vibratory pile driver.
3. An impact pile driver shall only be used when necessary to complete installation of piles in accordance with seismic safety or engineering criteria.
4. If an impact pile driver is used it shall be cushioned using a 12-inch thick wood cushion block, which will reduce noise levels by 4 to 5 dB.

5. Bubble curtains shall be used during any impact pile driving of piles located in water. The bubble curtain will reduce the noise levels by up to 15 dB. The bubble curtain shall be operated in a manner consistent with the following performance standards:

    a. The bubble curtain shall distribute air bubbles around 100% of the piling perimeter for the full depth of the water column.

    b. The lowest bubble ring shall be in contact with the mudline for the full circumference of the ring, and the weights attached to the bottom ring shall ensure 100% mudline contact. No parts of the ring or other objects shall prevent full mudline contact.

    c. Air flow to the bubblers must be balanced around the circumference of the pile.

6. A "soft start" technique shall be employed if an impact pile driver will be used on any piles (on land or in water). The first few taps of the hammer on the piling should deter fish and marine mammals away from the pilings before full impact strength is applied, reducing the potential for fish and marine mammals to be present and exposed to potential injury during full hammer strikes. This technique shall be used upon initiation of pile driving or when there is a downtime of 30 minutes or more without pile driving.

7. Pile driving shall occur only during daylight hours.

8. A Hydroacoustic Monitoring Plan will be developed prior to and implemented during pile driving activities. Hydroacoustic monitoring will be conducted at 10 m from all pile driving if an impact hammer is used to set the pilings. Impact hammer pile driving will cease for at least 12 hours if the cumulative sound exposure levels reach 186.5 dB at 10 m regardless of the number of strikes. To minimize the potential for injury to marine mammals, the following measures will additionally be implemented:

    a. If threshold noise levels are recorded during pile driving, a shutdown zone equal to the distance at which injury threshold sound levels were recorded will be established around each pile.

    b. A qualified biological monitor will visually scan the project site and surrounding waters for the presence of marine mammals at least 30 minutes before and continuously throughout periods of impact pile driving. If any marine mammal is sighted in the shutdown zone before pile driving begins, the contractor (or other authorized individual) will delay pile-driving activities until the animal has moved outside the shutdown zone or the animal is not resighted (within 15 minutes for pinnipeds or 30 minutes for cetaceans).

    c. If any marine mammal is about to enter or is observed in the shutdown zone during pile driving, the pile-driving activities will be shut down until the animal has moved outside the shutdown zone, or the animal is not resighted (within 15 minutes for pinnipeds or 30 minutes for cetaceans).

9. A biological monitor or team shall be present during all pile driving to observe the work area before, during, and after pile driving. The monitor(s) will staff the hydroacoustic monitoring equipment and

record marine mammal use within the action area. The monitor(s) will also be responsible for ensuring that all pile driving work is conducted according to permit terms and conditions. In addition, contractors will consult with the biological monitor(s) to ensure that any changes to means and methods are in compliance with permit conditions relating to the protection of estuarine resources.

10. A debris containment structure (i.e., floating boom) will be installed outside of the pile driving area to ensure that any floating debris that enters the water will be contained for later collection and disposal.
11. A full complement of oil spill clean-up equipment will be on site and available for immediate deployment should there be an accidental discharge of fuel, lubricant, or hydraulic oils.

6.1.5 Impacts on Olympia Oyster Beds

Small populations of native oysters have been documented within the San Francisco Bay (Harris 2004, Latta 2006). Detailed surveys for native oysters were not conducted as part of this project. Potentially suitable habitat is distributed throughout the northern and eastern shoreline of the project site. Suitable substrate consists of the existing riprap to which oyster larvae can easily attach (Harris 2004). Larval forms of oysters are free-floating in the San Francisco Bay, and are known to occur at Coyote Point, one mile to the east and Oyster Point Marina, approximately 4 miles to the west of the project site. No obvious or large beds of oysters were observed during the reconnaissance survey of the project site. Nonetheless, due to their proximity to the site and the presence of suitable habitat along the north and east shoreline, the potential for Olympia oysters to colonize the project site cannot be ruled out. Therefore, construction of shoreline features including the kitesurfing ramp, tidal inlet, water rescue/kayak ramp, and associated riprap could potentially impact oysters through the removal of existing concrete debris and rock in those work areas. However, the living shoreline enhancement design would entail replacement of existing hard substrate with a similar material that would also be suitable for oyster settlement. For example, the project would remove existing concrete debris along the kitesurfing ramp and tidal inlet and replace it with new rock slope protection that incorporates living shoreline elements such as riprap modified with ample rugosity to provide suitable settlement habitat for native oysters. Thus, although the proposed project features would temporarily affect substrate potentially used by native oysters, that substrate would be replaced with equal amounts of equivalent (or better) habitat after the project is complete. Thus, the work would not substantially reduce Olympic oyster populations or available habitat. Consequently, the project would not have a substantial adverse effect on native oysters.

6.1.6 Impacts on Nonbreeding Special-Status Birds

Several special-status bird species occur on the project site as nonbreeding migrants, transients, or foragers, but they are not known or expected to breed or occur in large numbers within or near the project site. These are the California least tern, tricolored blackbird, northern harrier, burrowing owl, Vaux's swift, olive-sided flycatcher, San Francisco common yellow-throat, yellow warbler, Alameda song sparrow, Bryant's savannah sparrow, and white-tailed kite. The California least tern (a federal and state endangered, and fully protected species) primarily nests in Alameda County, and no suitable nesting habitat is present on or near the site. This species may forage over the open waters adjacent to the project site. The tricolored blackbird (a state threatened species) is not expected to occur on the project site as a breeder due to the absence of suitable breeding habitat,

but individuals may occur occasionally as foragers during the non-breeding season. The burrowing owl (a California species of special concern and candidate for listing under CESA) is not expected to breed on the site due to the lack of suitable burrowing habitat, but may infrequently occur as non-breeding migrant. The Vaux's swift and olive-sided flycatcher (both California species of special concern), breed in forested habitats, which are not present on the project site. However, they may occur as migrants. Other avian California species of special concern, including the northern harrier, San Francisco common yellowthroat, Alameda song sparrow, Bryant's savannah sparrow, and yellow warbler, breed in or near wetland or riparian habitats; no suitable breeding habitat for these species is present on the site, but these species may occur on the project site as nonbreeding visitors. The white-tailed kite (state fully-protected species) nests in shrubs and trees near open grassland habitats. These species may also occasionally occur on the site as nonbreeding visitors, but they would not nest on the site.

Project activities would result in some loss or disturbance of foraging habitats and could disturb foraging or roosting individuals of these species. Construction activities might result in a temporary direct impact through the alteration of foraging patterns (e.g., avoidance of work sites because of increased noise and activity levels during project construction) but would not result in the loss of individuals, as individuals of these species would fly away from any construction areas or equipment before individuals could be injured or killed. Further, the project site does not provide important foraging habitat used regularly or by large numbers of individuals of any of these species. As a result, impacts under the project will have very little impact on these species' regionally available foraging habitat and no substantive impact on regional populations of these species. Rather, the project may improve habitat for some of these species through restoration of more natural habitat, and it is possible that the Alameda song sparrow, San Francisco common yellowthroat, and Bryant's savannah sparrow could even breed on the project site after the project is implemented. It is also possible that marsh birds such as the California Ridgway's rail and California black rail could potentially occur on the project site after tidal marsh restoration occurs. However, the extent of the restored tidal marsh would not be sufficient to provide nesting habitat for either of those two species; rather, if those species occur at all after tidal marsh restoration, they would occur as infrequent visitors during dispersal, primarily outside the breeding season. Project operations would not result in impacts to those species.

6.1.7 Impacts on the Monarch Butterfly

Monarch butterflies are not known to form roost aggregations along the San Francisco Bay shoreline in San Mateo County, and there is no expectation that such roosts will form in the future on or near the project site. Further, this species is not expected to breed on the project site due to the absence of milkweed, its larval host plant. Rather, monarch butterflies are expected to occur on the site only as occasional visitors during migration. Project construction and operation are not expected to result in injury or mortality of monarchs, or the loss of any important foraging habitat for migrant individuals.

6.1.8 Impacts on Nonbreeding Western Red Bat

The western red bat (a California species of special concern) usually roosts in the foliage of trees (Pierson et al. 2006). Day and night roosts are often located along the edges of riparian areas, near streams, grasslands, and even urban areas. During the breeding season, western red bats establish individual tree roosts and occasionally small maternity colonies in riparian habitats (Zeiner et al. 1990). Western red bats do not breed in San Mateo County, but may occasionally be present on the project site as a migrant or winter resident. Unlike most birds, bats experience daily bouts of torpor to save energy during seasonally cool periods. As a result, torpid bats cannot immediately fly away when disturbed, and typically require upwards of 40 minutes to arouse and flee. Therefore, there is some potential for tree removal to injure or kill individual red bats. Although little is known about the habitat use of western red bats during the nonbreeding season (Pierson et al. 2006), western red bats are uncommon, and no more than one or two individuals could be impacted by the project. Because such limited impacts would affect only a very small proportion of regional migrant/wintering populations of the species, the impact would not rise to the CEQA standard of having a *substantial* adverse effect.

6.2 Impacts on Sensitive Communities

Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by CDFW or USFWS There is no riparian habitat located within the project area. Sensitive natural communities occurring within or in the general vicinity of the project site include seasonal wetlands, which are discussed below under Section 6.3, and potentially (further from the project site) eelgrass beds, which are discussed here. Although eelgrass beds are considered 'special aquatic sites' by USACE and they would therefore be considered as part of the wetland permitting process, they are also considered a sensitive natural community by CDFW and NMFS and are thus discussed under this criterion. As described in Section 5.3, surveys conducted in April and May 2021 by Merkel & Associates, Inc. did not detect any eelgrass growing within a 148-foot buffer of the project boundary site. Furthermore, their analysis concluded that conditions along the existing concrete rubble shoreline of both the San Francisco Bay and Sanchez Creek were considered less than favorable for the establishment of eelgrass. Along the San Francisco Bay shoreline this is primarily due to the greater degree of wave exposure and substantial hydrodynamic energy as compared to the nearby locations to the west and east where eelgrass populations are known to occur. Along Sanchez Creek, the channel's entrenched geometry, hardened banks, and evidence of scour precludes eelgrass establishment in areas where depth and substrate conditions might otherwise be suitable.

Nevertheless, eelgrass has been found in relatively low abundance within approximately 1,600 feet east of the project area in 2014 (Merkel & Associates, Inc. 2015) and a small, isolated patch was observed approximately 1,000 feet west of the project area in 2009 but was not present in 2014 baywide surveys (Merkel & Associates, Inc. 2009). Given the history of intermittent eelgrass presence in the near vicinity of the proposed project and prior eelgrass habitat suitability modeling predicting potentially suitable conditions occurring within the project

vicinity, a pre-construction survey may be requested by the resource agencies as specified in the CEMP (NMFS 2014).

Disturbance to the mudflats and intertidal habitat on the Bay side of the existing concrete rubble shoreline from the creation of the new tidal inlet, as well as removal of debris and placement of fill and piles required for the kitesurfing and water rescue/kayak ramps could potentially affect eelgrass on the subtidal mudflat along the project site if it were present. Potential effects from these activities could range from short-term to permanent, depending on the extent and degree of disturbance, and would be expected to result in possible mortality, physical injury, or physiological stress resulting from reduction in habitat suitability, and physical disturbance/removal. Placement of fill for the kitesurfing ramp, and water rescue/kayak ramp could result in direct mortality of eelgrass beds, if present. Any such impacts resulting in substantial damage to eelgrass beds would require mitigation because eelgrass beds are considered to be of critical importance to marine life and are generally quite rare throughout the San Francisco Bay. This potential impact would be reduced to adequate levels through implementation of MM BIO-8.

6.2.1 Mitigation Measure BIO-8: Pre-Construction Surveys for Eelgrass and Translocation or Compensatory Mitigation if Necessary

Prior to onset of any in-water construction activities, and within 60 days of construction initiation, an eelgrass survey shall be conducted within the same buffer of the project boundary previously surveyed and described in Appendix C. As per the CEMP, the survey area shall be scaled as appropriate to the size of the potential action and the potential extent and distribution of eelgrass impacts, including both direct and indirect effects. The survey shall be conducted according to the methods contained in the CEMP (NMFS 2014). If eelgrass beds are absent within the area surveyed, then no further mitigation will be required. If eelgrass is found within the surveyed area, then a qualified biologist shall determine (in coordination with NMFS and CDFW) whether the eelgrass bed is likely to be impacted to the point that relocation or compensatory mitigation is necessary. That determination will be based on distance between the eelgrass and the work area, tidal current patterns, water depth, and other factors that may influence whether increased turbidity or sediment mobilization could impact the eelgrass. If eelgrass will be impacted to the point that translocation is appropriate, any translocation of eelgrass beds shall be conducted consistent with the methods described in the CEMP and/or those described in *Eelgrass Conservation in San Francisco Bay: Opportunities and Constraints* (Boyer and Wyllie-Echeverria 2010). If it is determined that eelgrass will be impacted but it is not possible to translocate eelgrass beds, then the project applicant shall provide compensatory mitigation consistent with the CEMP for eelgrass. As per the CEMP, multiple compensatory mitigation options are possible, but in this case the most appropriate would be in–kind mitigation. The eelgrass Mitigation and Monitoring Plan shall be prepared in conjunction with input from NMFS and CFDW and as per the CEMP shall provide at a minimum the following items:

- Results of preliminary eelgrass survey and pre/post-project eelgrass surveys, and summary of projected eelgrass impacts
- Goals of the in-kind mitigation to achieve no net loss of eelgrass or eelgrass habitat function

- Description of proposed mitigation site and reference site(s)
- Mitigation design including:
    - Description of proposed mitigation methods
    - Construction schedule, including specific starting and ending dates for all work including mitigation activities
    - Planting plan (eelgrass propagule procurement and installation)
    - Maintenance plan
- Schedule and description of proposed post-project monitoring and when results will be provided to NMFS and CDFW
- Schedule and description of process for continued coordination with NMFS and CDFW through mitigation implementation
- Monitoring measures, and performance and success criteria. Monitoring events and milestones are detailed in the CEMP but include the following milestones, as an example:
    - By year 1 the mitigation site should achieve a minimum of 40% coverage of eelgrass and 20% density of the reference site(s) over not less than 1.2 times the area of the impact site
    - By year 2 the mitigation site should achieve a minimum of 85% coverage of eelgrass and 70% density of the reference site(s) over not less than 1.2 times the area of the impact site
    - By year 3 the mitigation site should achieve a minimum of 100% coverage of eelgrass and 85% density of the reference site(s) over not less than 1.2 times the area of the impact site
- Description of alternative contingent mitigation or adaptive management should the proposed mitigation fail to achieve performance measures
- Description of mitigation reporting

The mitigation shall be deemed complete and the applicant released from further responsibilities when the final success criteria have been met, or when the mitigation is deemed complete as determined by NMFS.

6.3 Impacts on Wetland and Aquatic Habitats

Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means) State and federally protected waters and wetlands surround the site as the open water and subtidal habitat of the San Francisco Bay and Sanchez Creek, and 0.40 acre of seasonal wetland habitat is present in the uplands on the project site. USACE has claimed jurisdiction over the waters of the San Francisco Bay and Sanchez Creek below the HTL under Section 404 of the CWA. In addition, as described in Section 5.3, USACE's existing PJD considers the seasonal wetlands as three-parameter wetlands that are

subject to jurisdiction under Section 404 of the CWA. The open waters of San Francisco Bay and Sanchez Creek and the seasonal wetlands would also be considered state protected waters and wetlands by RWQCB and protected under Porter-Cologne and Section 401 of the CWA. The open waters of Sanchez Creek up to the top of bank are expected to be regulated by CDFW under the CFGC Section 1603 by virtue of being the downstream continuation of a stream conveying freshwaters from the upslope watershed to the west.

6.3.1 Seasonal Wetland Habitat Impacts

The project will permanently impact the entirety of the 0.40 acres of seasonal wetlands on the site, through mass grading required for project implementation (Figure 6). The existing seasonal wetlands are scattered throughout the upland ruderal grassland portion of the site that constitutes former fill in historical baylands. The seasonal wetlands occur in slight depressions in the landscape which are likely the result of differential settlement of fill over bay muds. As described in Section 4, the hydroperiod of the depressions is typically brief, shallow (less than 6 inches deep), and driven by incidental precipitation following winter storm events and vegetation in the wetlands is dominated by non-native, ruderal, facultative wetland species. The existing seasonal wetlands provide low ecological functions and services due to the dominance of non-native vegetation, brief duration of shallow inundation, lack of hydrologic connectivity to a larger watershed, and lack of observations of wetland animals using these features.

As described in the project description, the project entails the restoration of an approximately 3-acre tidal salt marsh ecosystem. The site occurs within historical baylands that were previously filled, and the project would remove a portion of this fill and reconnect the excavated area to the bay's tides to restore tidal marsh. The restored ecosystem would be dominated by native plant species that would consist of approximately 1.5 acres of tidal salt marsh, plus 0.16 acres of subtidal/mudflat slough channel habitat below the current HTL. The restored ecosystem also includes approximately 1.5 acres of associated marsh-upland ecotone habitat (ecotone) above the current HTL. To achieve the project goal to restore a tidal marsh with substantial ecological benefit, it is necessary to impact the seasonal wetlands in their current position. Avoidance of the seasonal wetlands would preclude the restoration of substantial tidal marsh and limit the final extent of ecotone habitat.

While the permanent loss of 0.40 acres of seasonal wetlands might be considered significant under CEQA in most circumstances, the project would result in restoration of 1.5 acres of new tidal marsh and 0.16 acres of subtidal/mudflat habitat (i.e., slough channels) below the current HTL and restoration of 1.5 acres of marsh-upland ecotone above the current HTL. This restored tidal marsh ecosystem is expected to provide ecological functions and acreage substantially greater than the existing, low quality seasonal wetlands. Additionally, ecotone vegetation would consist of a diverse transition of plant communities from those that are relatively salt and flood tolerant near the toe of slope/marsh to those that are more drought tolerant toward the top of slope. While it is not known at this point what percentage of marsh-upland ecotone habitat would develop into seasonal wetland habitat, at least a third to half of that area is expected to be dominated by native plant species that would be characteristic of seasonal wetland habitats around the San Francisco Bay edge, including species such as creeping wild rye (*Elymus triticoides*), marsh gumplant (*Grindelia stricta*), saltgrass, perennial pickleweed,

and alkali heath. Vegetation in the ecotone will be established through a combination of seeding and container plant installation, along with three years of vegetation maintenance.

6.3.2 Aquatic Habitat Impacts

Installation of shoreline treatments (kitesurfing ramp, water rescue/kayak ramp, tidal inlet, northeastern shoreline repair, and associated rock slope protection) that require modification of the substrate within the San Francisco Bay will result in temporary and permanent impacts to waters of the U.S. and waters of the state that would be subject to Section 10, Section 404, and Section 401 regulation under the CWA, as well as the State Porter-Cologne Act (Figure 6). Up to 0.27 acres of aquatic habitat below the HTL would be temporarily impacted via removal of concrete debris and replacement with imported hard substrate (e.g., rip rap) which would include living shoreline habitat enhancement elements below the HTL; the locations of these areas are depicted on Figure 6 as rocky intertidal fill/living shoreline enhancement. The project would also result in 0.69 acre of temporary impacts during construction on aquatic habitat within a turbidity curtain area placed around the in-water work areas. Coffer dam/sheet pile installation would occur within the footprint of the turbidity curtains; thus this 0.69-acre area also includes temporary impacts due to dewatering and fish exclusion. Pre-existing biotic and abiotic conditions within the turbidity curtain area are expected to rapidly re-establish following completion of construction and removal of the turbidity curtain.

The rocky intertidal fill/living shoreline enhancement areas are considered a temporary impact because the project would replace anthropogenic concrete debris in the footprint of temporary impacts with a type of hard substrate (rock slope protection) that will facilitate rapid colonization by native hard substrate macroalgae and aquatic invertebrates below approximately MHW. The rapid colonization will be facilitated via both import of hard substrate with adequate rugosity and reuse of some of the existing hard substrate that currently supports native macroalgae and aquatic invertebrates, (as a propagule source). From approximately MHW up to the HTL, where feasible, the rock slope protection will incorporate soil and active revegetation to establish native salt marsh vegetation (in rock-crown treatments).

The shoreline treatments would also result in up to 0.08 acres of permanent impacts to existing aquatic habitat below the HTL via installation of concrete water access ramps that would be frequently utilized by people for water access; this is denoted as "concrete fill" on Figure 6. While permanent impacts to 0.08 acres of waters of the U.S./State would in some cases be considered significant under CEQA, the project proposes to restore approximately 0.16 acre of new subtidal/intertidal mudflat habitat (i.e., slough channels) within the proposed tidal inlet and restored tidal marsh. In addition, the project will restore at least 1.5 acres of jurisdictional tidal salt marsh below the HTL. Overall, this project is expected to provide a net benefit to the surrounding aquatic intertidal habitat, as a total of 1.7 acres of tidal marsh, rocky intertidal, and subtidal/mudflat habitat will be restored.

In addition, projects causing land disturbances that are equal to one acre or greater must comply with State requirements to control the discharge of stormwater pollutants under the NPDES/Construction General Permit. As this project will disturb greater than one acre, prior to the start of construction/demolition, a Notice

of Intent will be filed with the State Water Board describing the project. In complying with State requirements to control the discharge of stormwater pollutants under the NPDES/Construction General Permit, the project will be required to develop and maintain a Storm Water Pollution Prevention Plan, which will include the use of BMPs to protect water quality until the site is stabilized. Standard permit conditions under the NPDES/Construction General Permit require that the applicant utilize various measures including: on-site sediment control BMPs, damp street sweeping, temporary cover of disturbed land surfaces to control erosion during construction, and utilization of stabilized construction entrances and/or wash racks, among other factors. Additionally, in many Bay Area counties, including San Mateo County, projects must also comply with RWQCB, San Francisco Bay Region, Municipal Regional Stormwater NPDES Permit (MRP) (Water Board Order No. R2-2009-0074). This MRP requires that all projects implement BMPs and incorporate Low Impact Development practices into the design that prevent stormwater runoff pollution, promote infiltration, and hold/slow down the volume of water coming from a site. To meet these permit and policy requirements, the project would incorporate the use of such elements as tree planters, grassy swales, and bioretention and/or detention basins. Compliance with these permits would prevent significant negative water quality impacts and improve stormwater runoff compared to existing conditions at the project site, and further avoid water quality impacts on the San Francisco Bay. Implementation MM BIO-2 (Erosion and Sedimentation Control) described above in Section 6.1.3 would further minimize any adverse indirect effects on waters or wetlands from construction-related activities (e.g., dewatering discharge).

With the water quality protection measures required by compliance with the general construction permit and the MRP and implementation of MM BIO-2, the project would not have a substantial adverse effect on federally or state protected waters, and impacts would be less than significant under CEQA.

6.4 Impacts on Wildlife Movement and Nursery Sites

Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites

Impacts on Wildlife Movement (No Impact)

Development that fragments natural habitats (i.e., breaks them into smaller, disjunct pieces) can have a twofold impact on wildlife: first, as habitat patches become smaller, they are unable to support as many individuals (patch size), and second, the area between habitat patches may be unsuitable for wildlife species to traverse (connectivity). Despite its location along the San Francisco Bay, the project site does not provide important environmental corridors for movement of aquatic or terrestrial wildlife species. The project site is situated along the Pacific Flyway for migratory birds and may host occasional migratory birds that stopover to rest and forage. However, due to the disturbed habitat that covers a majority of the site, other nearby areas, such as Coyote Point which supports more complex habitats, attract more migratory species. The site is situated near Anza Lagoon, an urban aquatic park to the north, and common urban-adapted species such as the native raccoon (*Procyon lotor*) and common bird species likely make small-scale movements between the two sites to forage and breed. However, few other terrestrial species depend on the site as a movement corridor. Sanchez Creek does attract a variety of fish, which likely travel between the San Francisco Bay and Sanchez Lagoon and Marsh to

forage and rest. However, proposed project features along Sanchez Creek, such as the water rescue/kayak launch, will not impede movement of fish along the creek. The combination of positive sloped grading and the rock entrance elevation incorporated into the tidal marsh design will provide positive drainage and will avoid fish stranding at the marsh at low tide. Furthermore, the majority of the project site will remain open space, and after restoration of the site is completed, will provide higher quality habitat compared with the current conditions. As such, the project will increase foraging and resting opportunities for migratory birds along the Pacific Flyway.

6.4.2 Impacts on Wildlife from Artificial Lighting

Many animals are sensitive to light cues, which influence their physiology and shape their behaviors, particularly during the breeding season (Ringer 1972, de Molenaar et al. 2006). Artificial light has been used as a means of manipulating breeding behavior and productivity in captive birds for decades (de Molenaar et al. 2006), and has been shown to influence the territorial singing behavior of wild birds (Longcore and Rich 2004, Miller 2006, de Molenaar et al. 2006). While it is difficult to extrapolate results of experiments on captive birds to wild populations, it is known that photoperiod (the relative amount of light and dark in a 24-hour period) is an essential cue triggering physiological processes as diverse as growth, metabolism, development, breeding behavior, and molting (de Molenaar et al. 2006). This holds true for birds, mammals (Beier 2006), and other taxa as well, suggesting that increases in ambient light may interfere with these processes across a wide range of species, resulting in impacts on wildlife populations.

Artificial lighting may indirectly impact mammals and birds by increasing the nocturnal activity of predators such as owls, hawks, and mammalian predators (Negro et al. 2000, Longcore and Rich 2004, DeCandido and Allen 2006, Beier 2006). The presence of artificial light may also influence habitat use by rodents (Beier 2006) and by breeding birds (Rogers et al. 2006, de Molenaar et al. 2006) by causing avoidance of well-lit areas, resulting in a net loss of habitat availability and quality.

Excessive lighting can also alter the behavior of migrating birds. Vertical beams can disorient birds flying at lower altitudes. Birds that encounter beams from up-lights are likely to respond to the lights and may become disoriented or attracted to the lights to the point that they collide with buildings or other nearby structures.

Within the last ~100 years, fish have been exposed to artificial lighting at night and can potentially affected by artificial lighting in several ways: changes to essential behaviors such a feeding, schooling and migration, increased predation, and effects on metabolic processes and reproduction (Nightingale et al. 2006, Longcore et al. 2018a, 2018b, Brayley et al. 2021). The project is not expected to affect spawning, since salmonid, green and white sturgeon, and longfin smelt do not spawn in the project area. The project is also not expected to delay upstream migration of adult salmonids, because South San Francisco Bay is a migration corridor, and adults are likely using water quality cues to move quickly through the channel to freshwater tributaries to spawn. The project could increase susceptibility of outmigrating juvenile salmonids to predation since light disrupts their movements (Johnson et al. 2005, Rondorf et al. 2010) and attracts their predators (Nelson et al. 2021). The

activity of certain salmonids in San Francisco Bay, including adult green sturgeon, are independent of light level without discernable peaks in activity throughout the day or based on light level (Kelly et al. 2007).

Currently, there is no lighting on the site, but there is a substantial amount of lighting associated with development west and south of the site. Still, trees that line the site along Bayview Place and Airport Boulevard offer some amount of shielding of this lighting and much of the site is not exposed to artificial lighting. The project would include outdoor lighting in the landscape and along the exterior of the education center. Lighting will be designed with sensitivity to the adjacent restored habitat and existing habitats (i.e., Sanchez Creek and the Bay) such that the lighting will avoid glare, excess light and light pollution, select light color to minimize effects of wildlife, and reduce high contrasting lighting. Additionally, automated interior blackout shades would be installed on all windows on the education center's north/northwest and east facades as well as the galleries' south facing clerestory windows. These shades would be programmed to close when the building is not in use and between 10pm and sunrise. Given the amount of existing lighting adjacent to the site and the proposed minimization of lighting on the site, the project would not have appreciably greater illuminance than the existing conditions. Furthermore, those species that currently occur on the site are adapted to artificial lighting and would continue to use the site after it is constructed. However, because the lighting design has not been finalized, MM BIO-9 is included to ensure the project would sufficiently minimize potential impacts of lighting.

6.4.2.1 Mitigation Measure BIO-9: Minimize Exterior Lighting

To the extent consistent with the normal and expected operations of the completed project, measures shall be implemented to minimize the degree to which natural habitats on and surrounding the project site are illuminated by project lighting. Such measures may include the installation of motion-sensor lighting, automatic light shut-off mechanisms, downward-facing exterior light fixtures, the use of Dark-Sky-compliant lighting, and others. Exterior lighting within the project footprint shall be shielded as needed to block illumination from shining upward, or outward into the bay and Sanchez Creek.

6.4.3 Impacts due to Bird Collisions

Development of the project would result in the construction of one new building on a currently undeveloped site. Construction of the new buildings may increase the risk of avian mortality due to collisions. Glass windows and building facades can result in injury or mortality of birds due to collisions with these surfaces. Because birds do not perceive glass as an obstruction the way humans do, they may collide with glass when the sky or vegetation is reflected in glass (e.g., they see the glass as sky or vegetated areas); when transparent windows allow birds to perceive an unobstructed flight route through the glass (such as at corners); and when the combination of transparent glass and interior vegetation (such as in planted atria) results in attempts by birds to fly through glass to reach that vegetation. These risks are highest for buildings in or near areas of high avian activity or movement, such as migratory corridors, large open spaces, large water bodies, and riparian habitats. The project site is located along the Pacific Flyway and is within one mile of Coyote Point Recreation Area, which supports large numbers of resident and migratory bird species (Cornell Lab of Ornithology 2021). Currently, avian abundance and diversity is low on the project site, despite the site's proximity to Coyote Point.

This is due to the relatively low quality habitat that currently exists on the site and the surrounding development. Once the project is completed, it is anticipated that avian abundance will increase on the site, especially in the restored marsh and ecotone habitats. Thus, the site could be perceived as an "oasis" of bird habitat. Though many of the species associated with the bay shoreline and marsh habitats are not expected to use the upland habitats on the project site, many resident and migratory species will move between the project site and nearby habitats. Thus, following construction of the project, birds using on-site habitats and flying between habitats on the site or flying through the area (from any direction) have some potential to collide with the new building in the absence of bird safe facades.

There are no adopted San Mateo County or City of Burlingame bird-safe design standards. However, given the expected increased value of the site to birds after construction, more birds are expected to utilize and/or fly through the site over the long term, relative to existing conditions. Enough individuals of a variety of species can potentially strike the new building over the long term that we consider bird-building collisions to be a potentially significant impact under CEQA.

To avoid impacts to birds due to collisions, the project has incorporated a variety of bird-safe design features into the facade of the education building. For example, the education building will incorporate bird-safe glazing on certain portions of the building to reduce the frequency of bird collisions with glazed facades. The minimum extent of the proposed bird-safe glazing treatment on the building's facades would include the large glass panels on the north/northwest and east facades. Bird-safe glazing treatments may include fritting, netting, permanent stencils, frosted glass, exterior screens, physical grids placed on the exterior of glazing, or ultraviolet patterns visible to birds. The bird-safe pattern would have vertical elements at least ¼-inch wide at a minimum spacing of 4 inches, and horizontal elements at least ⅛-inch wide at a minimum spacing of 2 inches. With these proposed bird safe design features, impacts due to bird collisions would be sufficiently minimized.

6.4.4 Impacts on Pacific Herring Spawning Habitat

The San Francisco Bay is home to the largest population of Pacific herring in California. This species provides food for a variety of Bay species that occur in the Bay and is an economically important fishery for the region (Watters et al. 2004). Pacific herring spawn on a variety of natural and artificial substrates including eelgrass, rocks, oyster reefs, pier pilings, and riprap in intertidal and shallow subtidal habitat. Due to their ecological value and economic importance in the Bay, this fishery has been monitored annually since the early 1970s by CDFW (CDFW 2019a).

In the vicinity of the project site, spawning has been documented within one mile of the site at Coyote Point in 2021 and recent years (CDFW 2019a, The Lost Anchovy 2021, Watters et al. 2004) and approximately 8 miles to the north at Candlestick Point during the 2018-2019 season, but they have also been documented approximately 4 to 6 miles to the north at San Bruno Point and Oyster Point in previous years (Watters et al. 2004). Spawning has not been reported along the shoreline of the project site during ongoing monitoring of this portion of the Bay, and therefore Pacific herring are unlikely to spawn on the site. However, because potential spawning habitat is present on site and herring are known to spawn within one mile of the site, the

potential for spawning cannot be ruled out. Nevertheless, the project has an in-water work window (June 1 – November 30) that precludes in-water work during the spawning season; thus, impacts to spawning herring will be sufficiently avoided.

6.4.5 Impacts on Nesting Birds

Construction disturbance during the bird nesting season (February 1 through August 31, for most species) could result in the incidental loss of eggs or nestlings, either directly through the destruction or disturbance of active nests or indirectly by causing the abandonment of nests. Due to the absence of native-dominated or sensitive habitats from the project site, the habitat on the site supports primarily regionally common, urban-adapted breeding birds, and the numbers that occur on the site (i.e., two to three pairs of each species) represent only a very small proportion of these species' regional populations. In addition, many of these birds are expected to continue to nest and forage on the project site following project construction. Although the project will remove the majority of existing trees, new trees will be planted and restoration of the site will improve habitat conditions by providing restored tidal salt marsh and marsh-upland ecotone habitats. These habitats along with other landscaping will continue to provide food and structural resources for the common, urban-adapted resident and migrant birds that use the site, and may create nesting and foraging opportunities for additional species. Therefore, project impacts on nesting and foraging birds that occur on the site would not rise to the CEQA standard of having a substantial adverse effect. However, all native birds that may nest on the project site are protected by the MBTA and/or the CFGC. Therefore, we recommend implementation of the measures in Section 7.1 to avoid conflicts with the MBTA and CFGC.

6.5 Impacts due to Conflicts with Local Policies

Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance

6.5.1 Impacts Due to the Removal of Ordinance-Sized Trees

The proposed project would remove up to 11 trees that meet the definition of "protected" trees by City of Burlingame. Per the City of Burlingame Tree Ordinance, permits from the City's planning and building department and payment of a fee are required for the removal of any trees which meet the definition of "protected" tree, as defined in Section 3.3 above. The removal of trees protected by the City of Burlingame's tree ordinance, in the absence of compliance with the City's Municipal Code, would be considered potentially significant under CEQA. In accordance with the provisions of the City of Burlingame tree protection ordinance, the project will comply with standard City of Burlingame tree removal permit conditions and replace trees that are removed in accordance with these tree removal policies. Such compliance will sufficiently minimize any potential impacts due to conflicts with the City's tree preservation ordinance.

6.6 Impact due to Conflicts with an Adopted Habitat Conservation Plan

Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan (no impact)The San Bruno Mountain Habitat Conservation Plan is the only Habitat Conservation Plan that has been approved in San Mateo County, but this plan does not cover the project site or the surrounding vicinity. No Natural Community Conservation Plans have been approved or are in preparation in San Mateo County. Therefore, the proposed project would not conflict with any adopted Habitat Conservation Plans or Natural Community Conservation Plans, or with any other approved local, regional, or state habitat conservation plans.

6.7 Cumulative Impacts

Cumulative impacts arise due to the linking of impacts from past, current, and reasonably foreseeable future projects in the region. The cumulative impact on biological resources resulting from the project in combination with other projects in the project vicinity and larger region would be dependent on the relative magnitude of adverse effects of these projects on biological resources compared to the relative benefit of impact avoidance and minimization efforts prescribed by planning documents, CEQA mitigation measures, and permit requirements for each project; compensatory mitigation and proactive conservation measures associated with each project. In the absence of such avoidance, minimization, compensatory mitigation, and conservation measures, cumulatively significant impacts on biological resources would occur.

Future development activities in this part of Burlingame may result in impacts on the same habitat types and species that will be affected by the project. Implementation of the project, in combination with other projects in the area and other activities that impact the species that are affected by this project, could contribute to cumulative effects on special-status fish and EFH, federally or state protected wetlands and waters, or contribute to bird-building collisions. Other projects within the vicinity that may affect similar habitats and species include the Burlingame Point Project, an office/life science campus located at 300 Airport Boulevard immediately adjacent to the project site, the 567 Airport Blvd Project a new, eight-story office/research & development building (241,679 square feet) and parking garage located adjacent to the project site at 567 Airport Boulevard, and the Topgolf - 250 Anza Boulevard Project, located 0.6 miles to the west, and involving the development of commercial recreation and sports complex on an approximately 13-acre portion of a City owned property.

However, these projects will adhere to the aforementioned measures to avoid, minimize, and mitigate impacts on these resources. Further, the project would implement several BMPs and mitigation measures to reduce impacts on both common and special-status species, as described above. Thus, provided that this project successfully incorporates the mitigation measures described in this Biological Resources Report, the project will not contribute to substantial cumulative effects on biological resources.

Section 7.0 Compliance with Additional Laws and Regulations

7.1 Regulatory Overview for Nesting Birds

Several species of common native birds protected by the MBTA and the CFGC may nest in both native and nonnative trees, shrubs, and herbaceous plantings within the landscaped or grassland areas on the site or immediately adjacent to the site. The removal of vegetation or demolition of buildings supporting active nests may cause the direct loss of eggs or young, while construction-related activities located near an active nest may cause adults to abandon their eggs or young. This type of impact would not be significant under CEQA, in our opinion, because of the local and regional abundances of the species that could potentially nest on the site and the very low magnitude of the potential impact of development on these species (i.e., the project is expected to impact only two to three pairs of these species, which is not a substantial impact on their regional populations). However, the following measures should be implemented to ensure that project activities do not violate the MBTA and the CFGC:

- **Avoidance of the Nesting Season—**To the extent feasible, commencement of demolition and construction activities should be scheduled to avoid the nesting season. If demolition and construction activities are scheduled to take place outside the nesting season, all potential demolition/construction impacts on nesting birds protected under the MBTA and the CFGC will be avoided. The nesting season for most birds in San Mateo County extends from February 1 through August 31.
- **Pre-Activity/Pre-Disturbance Surveys—**If it is not possible to schedule construction activities between September 1 and January 31, then pre-activity surveys for nesting birds should be conducted by a qualified biologist to ensure that no nests will be disturbed during project implementation. We recommend that these surveys be conducted no more than seven days prior to the initiation of demolition or construction activities. During this survey, the biologist will inspect all trees and other potential nesting habitats (e.g., trees and shrubs) in and immediately adjacent to the impact areas for nests.
- **Non-Disturbance Buffers—**If an active nest is found sufficiently close to work areas to be disturbed by these activities, the biologist will determine the extent of a construction-free buffer zone to be established around the nest (typically 300 feet for raptors and 100 feet for other species, but subject to variation depending on the opinion of the biologist), to ensure that no nests of species protected by the MBTA and the CFGC will be disturbed during project implementation.
- **Inhibition of Nesting—**If construction activities will not be initiated until after the start of the nesting season, all potential nesting substrates (e.g., bushes, trees, grasses, and other vegetation) that are scheduled to be removed by the project may be removed prior to the start of the nesting season

(e.g., prior to February 1). This will preclude the initiation of nests in this vegetation, and minimize the potential delay of the project due to the presence of active nests in these substrates.

Appendix A. Plants Observed on the Project Site

Family	Scientific Name	Common Name
Anacardiaceae	*Toxicodendron diversilobum*	Poison oak
Apiaceae	*Foeniculum vulgare*	Fennel
Asteraceae	*Carduus pycnocephalus*	Italian thistle
Asteraceae	*Dittrichia graveolens*	Stinkwort
Asteraceae	*Erigeron canadensis*	Canada horseweed
Asteraceae	*Euryops pectinatus*	Golden daisy mush
Asteraceae	*Grindelia camporum*	Gumweed
Asteraceae	*Helminthotheca echioides*	Bristly ox-tongue
Asteraceae	*Pseudognaphalium luteoalbum*	Jersey cudweed
Asteraceae	*Sonchus asper*	Spiny sowthistle
Asteraceae	*Tragopogon porrifolius*	Salsify
Asteraceae	*Wyethia sp.*	
Brassicaceae	*Lepidium latifolium*	Broadleaved pepperweed
Brassicaceae	*Raphanus sativus*	Wild radish
Convolvulaceae	*Calystegia sepium*	Hedge bindweed
Cupressaceae	*Cypress sp.*	Monterey cypress
Cyperaceae	*Carex sp.*	Sedge
Fabaceae	*Acacia melanoxylon*	Blackwood acacia
Fabaceae	*Cytisus scoparius*	Scotch broom
Fabaceae	*Genista monspessulana*	French broom
Fabaceae	*Medicago polymorpha*	California burclover
Fabaceae	*Melilotus indicus*	Annual yellow sweetclvoer
Fabaceae	*Trifolium hirtum*	Rose Clover
Fabaceae	*Vicia sativa*	Common vetch
Fagaceae	*Quercus ilex*	Holly oak
Geraniaceae	*Pelargonium x hortorum*	Garden geranium
Lamiaceae	*Salvia sp.*	
Malvaceae	*Lavatera sp.*	Mallow sp.
Malvaceae	*Malva parviflora*	Cheesweed
Myrtaceae	*Eucalyptus conferruminata*	Spider gum
Myrtaceae	*Metrosideros excelsa*	New Zealand pōhutukawa
Oleaceae	*Olea europaea*	Olive
Pinaceae	*Pinus sp.*	

Family	Scientific Name	Common Name
Plantaginaceae	*Plantago coronopus*	Cut-leaf plantain
Plantaginaceae	*Plantago lanceolata*	Ribwort plantain
Poaceae	*Avena barbata*	Slender oat
Poaceae	*Avena fatua*	Wildoats
Poaceae	*Bromus diandrus*	Ripgut brome
Poaceae	*Cortaderia selloana*	Pampas grass
Poaceae	*Cynodon dactylon*	Bermuda grass
Poaceae	*Distichlis spicata*	Salt grass
Poaceae	*Festuca perennis*	Italian rye grass
Poaceae	*Hordeum marinum* var. *gussoneanum*	Mediterranean barley
Poaceae	*Hordeum murinum*	Foxtail barley
Poaceae	*Phalaris aquatica*	Harding grass
Poaceae	*Polypogon monspeliensis*	Rabbitsfoot grass
Poaceae	*Stipa miliacea*	Smilo grass
Polygonaceae	*Rumex crispus*	Curly dock
Rosaceae	*Heteromeles arbutifolia*	Toyon
Rosaceae	*Rubus armeniacus*	Himalayan blackberry
Salicaceae	*Salix lasiolepis*	Arroyo willow
Scrophulariaceae	*Myoporum laetum*	Ngaio

Section 1.0 Introduction

H. T. Harvey & Associates has prepared this Arborist Report, which describes the current tree conditions within the project area of The SPHERE Institute's proposed project, Bay Rise Park (referred to as the site), located in Burlingame, California (Table 1) (Figure 1). This report provides the applicable city codes and ordinances, an inventory of all trees on the site (with a diameter at breast height [DBH] greater than 4 inches), a figure showing the location of each tree in the inventory, a tree protection plan, and a table showing each tree's species, native status, DBH, health and structural scores, condition rating, and protected status per the City of Burlingame (City) Municipal Code (code).

Table 1. Properties Included in this Report

Street Address	Assessor's Parcel Number
410 Airport Boulevard	026-36-060, 026-36-061

Bay Rise Park Arborist Report (4113-02) May 2024

Section 2.0 Applicable Codes and Ordinances

2.1 Protected Tree Status

A tree with protected status is defined under item "f" in the City of Burlingame Municipal Code, Section 11.06.020 as:

> *(1) Any tree with a circumference of forty-eight (48) inches or more when measured fifty-four (54) inches above natural grade; or*
>
> *(2) A tree or stand of trees so designated by the city council based upon findings that it is unique and of importance to the public due to its unusual appearance, location, historical significance or other factor; or*
>
> *(3) A stand of trees in which the director has determined each tree is dependent upon the others for survival.*

Additionally planted trees within the public Right of Way (ROW) (i.e. Street Trees) are under control and are maintained by the City of Burlingame as defined in the City of Burlingame Municipal Code, Section 11.04.035:

> *It is unlawful for any person to cut down, trim, prune, plant, remove or injure or destroy any tree, shrub or plant in or upon any street or public place in the City without a permit therefore from the [Parks & Recreation] Director." Violators of this section are subject to fine and fines can be substantial.*
>
> *Do not trim, prune, cut or damage a City tree. If you notice a problem with a problem City tree, call the Parks Division at 558-7330 and report the problem. In emergency situations, City crews will respond 24 hours a day. In non-emergency situations, a City staff member will inspect the tree as soon as possible, usually within 3 days.*
>
> *Do not remove a City tree. If you are interested in having your City Street Tree considered for removal, call the Parks Division at 558-7330 and ask for an appointment to meet with the City Arborist. The City Arborist will review your situation and discuss your options with you.*
>
> *Do not prune any root over 2" in diameter on a City Street Tree. Severe root pruning can be detrimental to the health of the tree. Call 558-7330 to set up an appointment with the City Arborist.*
>
> *Do not plant any tree in the City's right-of-way. Every single family parcel is entitled to one street tree, provided by the City at no charge. If you wish to have another City Street Tree planted, call 558-7330. An appointment will be made for you with the City Arborist to discuss tree options and locations. If it is agreed that another street tree is appropriate at your location, you will be required to purchase the tree and the City tree crew will plant it and maintain it at no cost to you in the future.*
>
> *Do water your Street Tree. The City does not have the staff or equipment to water 11,000+ street trees and so residents or their gardeners are asked to water City trees on a regular basis during the dry season of the year. Please use care not to over-water or "drown" the tree.*

Do call the Parks Division if you observe a City Street Tree with a problem. The Parks Division telephone number is 650-558-7330.

2.2 Requirements Regarding Protected Trees

Requirements regarding removal of or work significantly affecting protected trees are described in the City of Burlingame Municipal Code, Section 11.06.060:

> ***11.06.060. Notices and permits required for removal or work significantly affecting protected trees.***
>
> *(a) Removal or Pruning. Owners, or their authorized representative, of protected trees on public or private property shall obtain a permit to remove or prune a protected tree. The application shall be on a form furnished by the department and shall state, among other things, the number and location of the tree(s) to be removed or pruned by type(s) and the reason for removal or pruning of each. The application shall also include a photograph with correct botanical identification of the subject tree or tree(s). An authorized representative of the department shall make an inspection of the tree(s) and shall file a written report and his or her recommendations to the director.*
>
> *(b) Educational Conference before Work Commences. After receipt of an application, the director may require an educational conference to inform the owner of potential alternatives to the proposed removal or pruning.*
>
> *(c) Removal or Pruning of Protected Trees on Undeveloped or Redeveloped Property. When an application for development or redevelopment of a property containing one or more protected trees is filed in any office or department of the city, the person making such an application shall file a site plan showing the location of buildings or structures or of proposed site disturbances, and the location of all trees. The director shall determine if all protected trees are shown. An authorized representative of the department shall make an inspection and shall file a report of his or her findings and recommendations to the director.*
>
> *Subject to the replacement provisions of Section 11.06.090, the director shall approve the removal of protected trees within the footprint of approved construction in the R-1 zone, which construction does not require a variance, conditional use permit, or special permit under Title 25 of this code. The notice and appeal provisions of Sections 11.06.070 and 11.06.080 shall not apply to such approvals.*
>
> *(d) Review. In reviewing applications, the director shall give priority to those based on hazard or danger of disease. The director may refer any application to another department, committee, board or commission of the city for a report and recommendation, and may require the applicant to provide an arborist's report. In reviewing each application, the director shall determine:*
>
> *(1) The condition of the tree(s) with respect to disease; danger of falling; proximity to existing or proposed structures, yards, driveways and other trees; and interference with public utility services;*
>
> *(2) The necessity to remove the tree(s) in order to construct any proposed improvements to allow economic enjoyment of the property;*
>
> *(3) The topography of the land and the effect of the removal of the tree(s) on erosion; soil retention; and diversion or increased flow of surface waters;*

(4) The number of trees existing in the neighborhood on improved property and the effect the removal would have on the established standard of the area and property value. Neighborhood is defined as the area within a 300-foot radius of the property containing the tree(s) in question;

(5) The number of trees the particular parcel can adequately support according to good arboricultural practices;

(6) The effect tree removal would have on wind protection, noise and privacy; and

(7) The economic consequences and obligations of requiring a tree to remain. (Ord. 1057 § 1, (1975); Ord. 1470 § 1, 1992); Ord. 1492 § 2, (1993); Ord. 1598 § 1, (1998); Ord. 1603 § 9, (1998))

Section 3.0 Methods

This report is based on a tree inventory and assessment that was completed on May 21, 2020 by H. T. Harvey & Associates' arborist Ryan Hegstad and restoration ecologist Vicki Chang. Ryan is an ISA-certified arborist (WE-12542A). On January 26, 2024, Ryan expanded the area of the tree inventory and assessment to include 4 trees in the median of Airport Boulevard and updated information on the trees originally assessed in 2020. All trees with a circumference of 13 inches (DBH of 4 inches) or greater were included in the inventory and assessment. Tasks conducted during the tree inventory and assessment consisted of the following:

- assessing the historical use, time of development, and approximate time of tree installation at the site;
- identifying each tree to species (scientific name and common name);
- assessing the native status of each tree;
- tagging each tree with an identifying number;
- recording the approximate location of each tree;
- measuring tree trunk diameter (DBH);
- determining the protected status of each tree;
- evaluating tree health and structural conditions; and
- taking two photos of each surveyed, protected tree.

Historical use of the site was assessed using Google Earth historical imagery (Google Earth 2021). Each tree species was assessed for native status (native or non-native) to Northern California. Any tree species not native to Northern California were compared to the California Invasive Plant Council (Cal-IPC) invasive plant inventory to assess their invasiveness and risk to the surrounding environment (Table 2) (Cal-IPC 2024).

DBH was measured using a diameter tape at 4.5 feet above finish grade. The protected status of each tree was evaluated based on the City's definition provided in Section 2.1 (above). This comparison was completed by calculating the corresponding DBH of the circumferences presented in the City's definition and comparing this to the measured trees. The location of each tree was recorded using a Trimble Geo 7X GPS. Tree assessments were made using ground-level visual observations and physical measurements. Each tree's health and structural conditions were given a score from 0–5 based on the criteria shown in Table 3.

Tree condition ratings were based on the combined health and structural ratings as follows:

- ***Poor*** if the summed scores were equal to or between 1 and 4
- ***Fair*** if the summed scores were equal to or between 5 and 7

- *Good* if the summed scores were equal to or between 8 and 10

An advanced assessment to quantify interior wood structure, root condition, and upper canopy condition was not performed as part of this assessment. Therefore, tasks performed did not include an excavation of the root zones of the trees, drilling for decay detection, collecting soil samples for laboratory testing, sending animal or vegetative material for laboratory testing, climbing the trees for an aerial inspection, a tree risk assessment, or a valuation (see Appendix A: Assumptions and Limiting Conditions and Appendix B: Certification of Performance). These tasks are not typically included in a standard arborist report.

Table 2. Cal-IPC Invasive Plant Ratings and Descriptions (Cal-IPC 2024)

Cal-IPC Rating	Cal-IPC Rating Description
High	These species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment.
Moderate	These species have substantial and apparent-but generally not severe-ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal, though establishment is generally dependent upon ecological disturbance.
Limited	These species are invasive but their ecological impacts are minor on a statewide level or there was not enough information to justify a higher score. Their reproductive biology and other attributes result in low to moderate rates of invasiveness.
Watch	These species have been assessed as posing a high risk of becoming invasive in the future in California.

Table 3. Tree Health and Structural Condition Evaluation Criteria

Condition Score	Tree Health	Tree Structure
5	A healthy, vigorous tree with a well-balanced crown. Normal to exceeding shoot length on new growth. Leaf size and color normal. No apparent pest problems or symptoms of disease. Exceptional life expectancy for the species.	Root plate undisturbed and clear of any obstructions. Root flare has normal shape. Trunk is sound and solid. No visible trunk defects or cavities. Balanced and even branch spacing, structure, and attachments.
4	Tree with slight decline in health. May have twig dieback in few parts of the tree. May have less than normal growth rate and minor deficiency in leaf development. Few pest problems or symptoms of disease. Typical life expectancy for the species.	Root plate appears normal with only superficial damage, if any. Possible signs of root dysfunction in and around trunk flare. May have minor trunk defects from previous injury with good closure. Less than 10% of bark missing. Good branch spacing, structure, and attachments.

Condition Score	Tree Health	Tree Structure
3	Tree with moderate health. Crown decline and dieback up to 25% of the canopy. Stunted shoot length on new growth. Leaves may be small and somewhat chlorotic. May have signs of pest problems and/or disease. Some decay may be present in main stem and branches. Below average life expectancy.	Root plate may have previous damage or disturbance and dysfunctional roots may be visible around main stem. Evidence of trunk damage or cavities with decay or defects may be present. Less than 25% of bark sections may be missing on trunk. Co-dominant stems may be present. Moderate branch spacing, structure, and attachments that may indicate poor pruning or damage.
2	Tree in decline. May have epicormic growth. Crown may have up to 50% dieback that may affect larger branches. May have little or no new growth on young stems. Leaf size may be small and color may indicate stress. Pest and/or disease problems may be severe. Decay may be present in main stem and branches. May be overmature. Life expectancy is low.	Root plate disturbance and defects may indicate major damage and/or girdling roots around the trunk flare. More than 25% of bark section missing. May have multiple dominant stems and/or included bark. May have poor branch spacing, structure, and attachments, and dead or broken branches. Canopy may have signs of severe damage or topping. May have extensive decay or be hollow.
1	Tree in severe decline. May have epicormic growth. Crown may have severe dieback affecting the majority of the tree. May have little or no new growth on young stems. Leaf size may be small and color may indicate severe stress. Pest and/or disease problems may be severe. Decay may be present in main stem and branches. May be overmature. Life expectancy is extremely low.	Root plate may have major structural problems that present an unacceptable risk. Tree structure may be irregular, unbalanced, and/or have multiple dominant stems. May have irregular and poor branch spacing, structure, and attachments. Dead or broken main branches may be present.
0	Dead	Dead

Section 4.0 Results

4.1 Site History and General Condition

The site and surrounding land were created by the Anza Corporation in the mid- to late 1960's by placement of fill without authorization across approximately 150 acres of former San Francisco Bay habitats. Following a lawsuit, this land was divided between the Anza Corporation and the California State Lands Commission (SLC). The 9.4-acre upland portion of the parcel is owned by SLC and was never developed. A small, paved parking lot along the eastern side of the parcel was constructed prior to 1993 (Google Earth 2021). Vegetation at the project site consists of ruderal forbs, scattered shrubs, and trees along portions the perimeter of the site as well as sparsely scattered within the site. Many of the existing trees likely existed before 1993 and may therefore be 30-55 years old.

4.2 Summary of Findings

The site includes 41 trees of nine (9) species (Figure 2, Table 4). Four (4) trees (Trees 7106, 7173, 7181, and 7184) that were included in the original survey have since died and are no longer included in this arborist report. Additionally, we have added Ngaio (*Myoporum luteum*) that are growing in tree form to this arborist report. However, most Ngaio were growing as shrubs and are not included. Eleven (11) of the 41 total trees are classified as protected and 4 of the 41 trees are considered street trees by the City of Burlingame Municipal Code (Table 5) (Appendix C). The most common species was Ngaio with 18 trees. Fifteen percent (15%) of trees were in good condition, 51% were in fair condition, and 34% were in poor condition (Table 4). Four (4) tree species (26 trees) are rated for invasiveness by Cal-IPC (Table 6) (Appendix C) (Cal-IPC 2024). A description of each tree, including scientific name, common name, native status, DBH, protected status, health score, structure score, and condition rating is presented in Appendix C.

4.3 Tree Condition

The majority of trees (51%) were in fair condition, some trees (34%) were in poor condition, and few trees (15%) were in good condition (Table 4). Many trees in fair and poor conditions had canopy dieback, or structural issues such as crossing branches or leaning or fallen over trunks. Table 4 summarizes tree condition by species.

4.4 Protected Trees

Eleven (11) protected trees (27%) were identified on site (Table 5). The majority of the protected trees are Monterey cypress and spider gum (Table 5). Additionally, 4 street trees are located in the median of Airport Boulevard. All of the street trees are London planetrees (*Platanus* × *hispanica*).

Table 4. Tree Quantity and Condition Summary

Scientific Name	Common Name	Total Trees	Tree Condition		
			Poor	Fair	Good
Acacia cyclops	Western coastal wattle	1	1	0	0
Acacia melanoxylon	Blackwood acacia	6	0	2	4
Eucalyptus conferruminata	Spider gum	5	1	4	0
Hesperocyparis macrocarpa	Monterey cypress	4	0	2	2
Heteromeles arbutifolia	Toyon	1	1	0	0
Metrosideros excelsa	New Zealand pōhutukawa	1	0	1	0
Myoporum laetum	Ngaio	18	11	7	0
Olea europaea	Olive	1	0	1	0
Platanus × hispanica	London planetree	4	0	4	0
Total		**41**	**14**	**21**	**6**

Table 5. Protected and Street Trees

Scientific Name	Common Name	Protected Trees	Street Trees
Eucalyptus conferruminata	Spider gum	4	0
Hesperocyparis macrocarpa	Monterey cypress	4	0
Metrosideros excelsa	New Zealand pōhutukawa	1	0
Myoporum laetum	Ngaio	2	0
Platanus × hispanica	London planetree	0	4
Total		**11**	**4**

4.5 Invasive Trees

Of the nine species (26 trees) observed on site, one species (18 trees) is listed by Cal-IPC as "Moderate", two species (7 trees) are rated a as having "Limited" invasiveness, and one species (1 tree) is listed as a species to "Watch" for posing a high risk of becoming invasive in the future (Table 6) (Cal-IPC 2024). A list of each species, count, and Cal-IPC rating is presented in Table 6.

Table 6. Invasive Species

Scientific Name	Common Name	Count	Cal-IPC Rating
Acacia cyclops	Western coastal wattle	1	Watch
Acacia melanoxylon	Blackwood acacia	6	Limited
Myoporum laetum	Ngaio	18	Moderate
Olea europaea	Olive	1	Limited
Total		**26**	

4.6 Photo Documentation

One to two photos of each protected tree are provided in Appendix D.

May 2024

Section 5.0 Tree Removal and Replacement

5.1 Tree Removal

According to the Tree Disposition Plan (Sheets L1.0-L1.2) submission dated May 1, 2024, 10 of the 11 (91%) surveyed protected trees and all 4 of the street trees are scheduled to be removed (Table 7). Tree removals are required for the majority of trees onsite because of the extensive grading and elevation changes required to construct the tidal marsh and build the coastal flood protection berm (see sheets L2.1-2.2).

Table 7. Protected Tree Removal

Scientific Name	Common Name	Protected Trees	Street Trees	Protected Trees to be Removed	Street Trees to be Removed
Eucalyptus conferruminata	Spider gum	4	0	3	NA
Hesperocyparis macrocarpa	Monterey cypress	4	0	4	NA
Metrosideros excelsa	New Zealand pōhutukawa	1	0	1	NA
Myoporum laetum	Ngaio	2	0	2	NA
Platanus × hispanica	London planetree	0	4	NA	4
Total		**11**	**4**	**10**	**4**

NA = Not Applicable

5.2 Replanting Requirements

Burlingame's Municipal Code Section 11.06.090 (Tree requirements and reforestation) regulates the planting of trees during the development or redevelopment of habitable space and the replacement of protected trees removed under a tree removal permit and states:

11.06.090 Tree requirements and reforestation.

(b) Permits for removal of protected tree(s) shall include replanting conditions with the following guidelines:

(1) Replacement shall be three (3) fifteen (15)-gallon size, one twenty-four (24)-inch box size, or one thirty-six (36)-inch box size landscape tree(s) for each tree removed as determined below.

(2) Any tree removed without a valid permit shall be replaced by two (2) 24-inch box size, or two (2) 36-inch box size landscape trees for each tree so removed as determined below.

(3) Replacement of a tree be waived by the director if a sufficient number of trees exists on the property to meet all other requirements of the Urban Reforestation and Tree Protection ordinance.

(4) Size and number of the replacement tree(s) shall be determined by the director and shall be based on the species, location and value of the tree(s) removed.

(5) If replacement trees, as designated in subsection (b)(1) or (2) above, as applicable, cannot be planted on the property, payment of equal value shall be made to the city. Such payments shall be deposited in the tree planting fund to be drawn upon for public tree planting. (Ord. 1470 § 1, (1992); Ord. 1492 § 3, (1993); Ord. 1598 § 1, (1998))

5.3 Tree Replacement

Based on the replacement criteria, 42 15-inch box trees, 14 24-inch box trees or larger, or a combination of the two are required to compensate for the protected and street trees to be removed. The project plans greatly exceed this requirement, as shown on sheets L4.1-L4.2 in the project's Planning Department application.

Section 6.0 Tree Protection Plan Requirements and Recommendations

The following section provides requirements and recommendations for tree protection for consideration by the design team during preparation of redevelopment plans.

6.1 Tree Protection Requirements

Tree protection requirements of protected trees to remain during construction are described in the City of Burlingame Municipal Code, Section 11.06.050:

> *11.06.050. Prohibitions and protections.*
>
> *(b) The following conditions shall be observed during construction or development of property:*
>
> *(1) Protected trees are to be protected by a fence which is to be maintained at all times;*
>
> *(2) Protected trees that have been damaged or destroyed by construction shall be replaced or the city shall be reimbursed, as provided in Section 11.06.090;*
>
> *(3) Chemicals or other construction materials shall not be stored within the drip line of protected trees;*
>
> *(4) Drains shall be provided as required by the director whenever soil fill is placed around protected trees; and*
>
> *(5) Signs, wires or similar devices shall not be attached to protected trees. (Ord. 1057 § 1, (1975); Ord. 1470 § 1, (1992); Ord. 1598 § 1, (1998))*

6.2 Recommendations for Tree Protection during Construction

The following recommendations are intended to supplement City's requirements.

- Protective fencing should completely enclose the Tree Protection Zone, which extends past the tree's entire dripline, and should be installed prior to demolition, grubbing, or grading. Protective fencing should be maintained in good condition and free of trash, debris, excess soil, chemicals, or equipment.
- Pruning prior to construction with the intent of improving tree health is not recommended. Where temporary clearance is needed for access, tree branches should be tied back to provide clearance. If any tree to be preserved requires pruning to provide construction clearance, the work must be approved in advance by the City and performed by a Certified Arborist or Tree Worker according to the latest edition of the ANSI Z133 and A300 standards as well as the Best Management Practices—Tree Pruning published by the International Society of Arboriculture. Pruning should not occur during periods of flight of adult boring insects.

- Any work that is expected to encounter tree roots should be monitored by the City and/or an ISA-Certified Arborist.
- Excavation at the edge of Tree Protection Zones should include the following tree protection measures:
    - Hand excavate under or around tree roots to depth of three (3) feet.
    - Do not cut main lateral tree roots or taproots. When main lateral tree roots or taproots are exposed, excavation should be discontinued until instructions to resolve the conditions are received from the City and/or Consulting Arborist.
    - Redirect roots in backfill areas where possible.
    - Expose main lateral roots beyond excavation limits as required to bend and redirect them without breaking.
    - If redirection is not practical, cut roots approximately three (3) inches back from new construction.
    - Protect exposed roots from drying out before placing permanent backfill.
- Prune roots that are affected by temporary and permanent construction only with the prior approval of the City and/or Consulting Arborist. Prune roots as follows:
    - Cut roots manually.
    - Cleanly cut exposed roots one (1) inch diameter and greater with sharp pruning instrument.
    - Do not use a backhoe or other equipment that rips, tears, or pulls roots.
    - Do not paint the ends of cut roots.

6.3 Recommendations for Long-Term Maintenance

During the first three (3) years following construction and plant installation, trees require additional care and maintenance to promote healthy growth and development. The following are recommended during this period:

- Monitor and evaluate the health and structure of preserved and newly installed trees on an annual basis (or more frequently as needed);
- Prune dead and/or hanging branches to improve safety;
- Evaluate and monitor the effectiveness of the irrigation system to ensure that it meets best management practices for water-efficient irrigation;
- Develop and implement an Integrated Pest Management (IPM) program, which (1) focuses on long-term prevention of pests or their damage by managing tree health and (2) combines management

approaches to pest control such as biologic, cultural, physical, mechanical, and chemical treatments for greater effectiveness;

- Remove and replace trees in decline. Inspect trees annually for hazard potential. As trees age, the likelihood of branch or entire tree failure increases.

Appendix A. Assumptions and Limiting Conditions

1. Any legal description provided to the consultant is assumed to be correct. Any titles and ownerships to any property are assumed to be good and marketable. No responsibility is assumed for matters legal in character. Any and all property is appraised or evaluated as though free and clear, under responsible ownership and competent management.
2. Property lines were not clearly surveyed or marked in the field by the owner, consultant attempted to provide as accurate of boundary for the inventory as possible using the limited data available.
3. Care has been taken to obtain all information from reliable sources. All data have been verified insofar as possible; however, the consultant can neither guarantee nor be responsible for the accuracy of information provided by others.
4. The consultant shall not be required to give testimony or attend court by reason of this report unless subsequent contractual arrangements are made, including payment of an additional fee for such services as described in the fee schedule and contract of engagement.
5. Loss or alteration of any part of this report invalidates the entire report.
6. Possession of this report or a copy thereof does not imply right of publication or use for any purpose by any other than the person to whom it is addressed, without the prior expressed written or verbal consent of the consultant.
7. Neither all nor any part of the contents of this report, nor copy thereof, shall be conveyed by anyone, including the client, to the public through advertising, public relations, news, sales, or other media, without the prior expressed written or verbal consent of the consultant particularly as to value conclusions, identity of the consultant, or any reference to any professional society or institute or to any initialed designation conferred upon the consultant as stated in her qualifications.
8. This report and values expressed herein represent the opinion of the consultant, and the consultant's fee is in no way contingent upon the reporting of specified value, a stipulated result, the occurrence of a subsequent event, nor upon any finding to be reported.
9. Sketches, diagrams, graphs, and photographs in this report, being intended as visual aids, are not necessarily to scale and should not be construed as engineering or architectural reports or surveys.
10. Unless expressed otherwise: a) information contained in this report covers only those items that were examined and reflects the condition of those items at the time of inspection and b) the inspection is limited to visual examination of accessible items without dissection, excavation, probing, or coring. There is no warranty or guarantee, expressed or implied, that problems or deficiencies of the plants or property in question may not arise in the future.

Appendix B. Certification of Performance

I, Ryan Hegstad, certify that:

The trees were personally inspected and the property referred to in this report and have stated my findings accurately. The extent of the evaluation is stated in the attached report and the terms of the assignment.

I have no current or prospective interest in the vegetation or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved.

The analysis, opinions, and conclusions stated herein are my own and are based on current scientific procedures and facts.

My analysis, opinions, and conclusions were developed and this report has been prepared according to commonly accepted arboricultural practices.

No one provided significant professional assistance to me, except as indicated within the report.

Compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party nor upon the results of the assessment, the attainment of stipulated results, or the occurrence of any subsequent events.

Ryan Hegstad
ISA-Certified Arborist WE-12542A

Preliminary Eelgrass Survey for the
Burlingame Shoreline Park Project, Burlingame, California

Dear Ms. Verpeet and Mr. Busnardo:

This letter serves to transmit information regarding the preliminary eelgrass (*Zostera marina*) survey conducted in support of permitting for the Burlingame Shoreline Park Project located at 410 Airport Blvd. in Burlingame, California.

PURPOSE AND INTRODUCTION

Merkel & Associates, Inc. (M&A) was retained by H.T. Harvey & Associates (HTH) to provide technical guidance in support of assessing whether eelgrass was present within close proximity to proposed shoreline improvements at 410 Airport Blvd. in Burlingame, California. The project area of potential effect (APE) was defined by a 45-meter buffer extending bayward of the project boundary and included the tidally-influenced lower reach of Sanchez Creek (Figure 1). Eelgrass surveys were conducted in conformance with the California Eelgrass Mitigation Policy (CEMP; NOAA 2014).

PROJECT LOCATION AND SURVEY AREA

The proposed Burlingame Shoreline Park Project is located at 410 Airport Blvd. in Burlingame, California and is situated along the western shore of San Francisco Bay approximately two miles south of the San Francisco International Airport. The project site primarily consists of undeveloped

uplands near the head of a small peninsula composed of bay fill, with armored shoreline revetment present along the northern boundary of the project area and along both banks of the lower reach of Sanchez Creek (Figure 1) on the east side of the project area. The APE was defined to include tidally-influenced portions of the project area within Sanchez Creek and extending 45 meters bayward of the project area boundary.

SURVEY METHODOLOGY

Under the guidance of M&A, HTH staff conducted the preliminary eelgrass surveys on April 30, and May 28, 2020 during low tide conditions, with water levels ranging from approximately -1.4 feet to -0.8 feet mean lower low water (MLLW), and -1.8 feet to – 1.3 feet MLLW respectively, during the surveys. To facilitate mapping and to identify an appropriate eelgrass reference area with similar site characteristics in close proximity to the project area, an unmanned aerial vehicle (UAV) was used to survey the project APE and adjacent intertidal areas located to the west and east of the project area where eelgrass has previously been detected during baywide comprehensive surveys (M&A, 2009; Figure 2).

Color and-near infrared imagery were collected to support detection and mapping of eelgrass, using automated flight control software to capture overlapping still images of the study area from an altitude of approximately 200 feet above ground level. Structure-from-motion (SFM) photogrammetry software (ArcGIS Drone2Map) was then used to create rectified orthomosaics of the survey area (Figure 1). Aerial imagery-based assessment was ultimately deemed appropriate for determining eelgrass presence/absence within the project area and adjacent tidelands under extreme low tide conditions (e.g. tidal water level ≤ -1 foot MLLW) given the shallow maximum depths encountered along the bay margin (approximately -2.5 feet MLLW) and lower Sanchez Creek (-4 feet MLLW). However; results of the preliminary flights covering the project area indicated that water clarity, surface texture, and solar illumination conditions were also critical factors for ensuring that any eelgrass encountered would be readily visible in the aerial imagery. Following completion of the May UAV survey, aerial orthoimagery was then evaluated using spectral and object-oriented image analysis techniques to determine whether eelgrass was present within the survey area. Ground truthing was subsequently conducted on June 15th during a - 0.5 foot low tide with an emphasis on lower Sanchez Creek, where the presence of several mixed algal beds identified in the imagery and associated with cobble/rubble substrate could have had the potential to mask or obscure sparse eelgrass in the aerial imagery.

View facing west from the mouth of Sanchez Creek at low tide on June 15, 2021. The shoreline along the bay margin within the APE consists of concrete revetment, with rock and cobble armor transitioning to mudflat between 0 and -2 feet MLLW along the northern perimeter of the project area.

Preliminary Eelgrass Survey - May 2021

Burlingame Shoreline Park Project
410 Airport Blvd, Burlingame, California

Figure 1

Merkel & Associates, Inc.

SURVEY RESULTS

The preliminary aerial survey conducted on April 30 did not result in the identification of any eelgrass within the APE, however; unfavorable wind-wave conditions and elevated turbidity precluded comprehensive coverage of the subtidal portion of the survey area. A follow up aerial survey conducted on May 28 during calmer weather conditions and at slightly lower tidal water levels was successful at fully resolving the bay floor within the survey coverage area, which extended approximately 200 – 320 feet beyond the APE (Figure 1). Following processing and orthorectification, aerial orthoimagery provided a ground resolution of approximately 2.4 cm/pixel and seamless coverage throughout the entirety of the APE. Image analysis and interpretation were subsequently performed by M&A staff. No eelgrass was found within the broader survey area following analysis of the May 28th orthoimagery. Several locations where mixed algal beds were identified and whose spectral signatures and textural complexity warranted closer inspection were selected for follow-up ground truthing, which was completed during low tide conditions on June 15th and confirmed that no additional eelgrass was present within the APE.

View facing north from left bank of Sanchez Creek near the creek mouth with San Francisco Bay visible in the background. In the foreground, red and green algae can be seen growing within a matrix of rock/rubble embedded in finer-grained substrate. A remnant piling is visible near the middle of the channel.

Low intertidal and shallow subtidal areas within the bay adjacent to the project area appear to provide potentially suitable substrate conditions and depths to support eelgrass below the toe of the shoreline rock armor. Eelgrass has been found in relatively low abundance within approximately 1,600 feet east of the project area in 2014 (M&A, 2015) and a small, isolated patch was observed approximately 1,000 feet west of the project area in 2009 but was not present in 2014 baywide surveys. Areas where eelgrass has been found have slightly different degrees of wave exposure relative to the project area's shoreline and observations of wind-wave conditions during the April 30th mapping flights suggest that this portion of the bay can be subject to substantial hydrodynamic energy, which may limit eelgrass from becoming established in areas where substrate conditions and depths appear otherwise favorable.

Within the lower portions of Sanchez Creek, shoreline revetment creates near vertical sideslopes along the tidally-influenced margins of the channel within the project area, with rock and rubble embedded in a

Red and green macroalgae attached to rock armor along the toe of the shoreline at 410 Airport Blvd. near the mouth of Sanchez Creek in Burlingame, CA.

Figure 2

matrix of finer-grained substrate in lower intertidal and shallow subtidal areas of the channel. Given the channel's entrenched geometry, hardened banks, and evidence of scour in the lower portion of the confined creek channel, it is likely that the distribution of shear stress across the channel bottom precludes eelgrass establishment in areas where depth and substrate conditions might otherwise be suitable. Further, in reviewing available aerial imagery and based on observations made during the surveys, it appears that Sanchez Creek experiences persistently elevated turbidity relative to the adjacent, open bay waters, which suggests that light limitation may be an additional constraining factor with respect to eelgrass occurrence within this portion of the project area.

DISCUSSION AND RECOMMENDATIONS

No eelgrass was detected within the APE nor was any found to occur within several hundred feet of the APE. Given the absence of eelgrass within the APE and more broadly within this immediate area of the bay, no impacts to eelgrass are expected from the proposed work. However; given the history of intermittent eelgrass presence in the near vicinity of the proposed project and prior eelgrass habitat suitability modeling predicting potentially suitable conditions occurring within the project area, a pre-construction survey may be requested by the resource agencies as specified in the CEMP (NOAA, 2014).

If you have any questions regarding this survey or the recommendations made, please do not hesitate to call.

Sincerely,

Whelan Gilkerson
Senior Biologist

Keith Merkel
Principal Ecologist

RE: Standard Records Search and Literature Review in Support of Bay Rise Park at 410 Airport Boulevard, Burlingame, San Mateo County, California

Dear Shannon George,

At your request, PaleoWest, LLC (PaleoWest) conducted a Standard Records Search and Literature Review in support of Bay Rise Park at 410 Airport Boulevard Project (Project) in the Anza Airport Park development in the City of Burlingame, San Mateo County, California (Figure 1).

The Project is on two vacant lots on Assessor's Parcel Numbers (APNs) 026-363-600 and 026-363-610 and extends into the adjacent Sanchez Creek (Project area), totaling 10.2 acres (Figure 2). This will be a California Environmental Quality Act (CEQA) reviewed project by the City of Burlingame as the CEQA lead agency. This letter report presents the results of the records search and literature review.

PROJECT DESCRIPTION

The proposed Project at 410 Airport Boulevard is a collaboration between The SPHERE Institute (SPHERE) and the San Mateo Resource Conservation District (SMRCD). The purpose of the Project is to transform the vacant 10.2 acres of bayfront land owned by the State Lands Commission into a public nature and recreation park. The Project would also restore the natural tidal marsh ecology of the San Francisco Bay shoreline.

PREPARER'S QUALIFICATIONS

This report was prepared and reviewed by the following archaeologists and the Principal Investigator who meet the Secretary of the Interior's (SOI) *Professional Qualification Standards for Archaeology* (NPS 1983):

- PaleoWest Senior Archaeologist Lora Holland, M.A., RPA #989173, oversaw the archaeological assessment and authored this report. Holland meets the *Secretary of the Interior's Professional Qualifications Standards for Archeology* (48 CFR 44716).

- Garrett Root, M.A., is a Senior Architectural Historian and Program Manager and authored this report. Root has over a decade of experience conducting historic-period resource investigations across the United States.
- Hannah Goldman, M.A., is an Architectural Historian who assisted with the Built Environment field inventory and analysis. Goldman has an M.A. in Architectural History from the University of Virginia and has three years of experience in historic preservation and cultural resource management in California.

RECORDS SEARCH RESULTS

On July 28, 2021, PaleoWest Senior Archaeologist Lora Holland conducted a records search of the Project area and a 0.25-mile (mi) search radius at the Northwest Information Center (NWIC) at Sonoma State University (NWIC File #21-0146) (Figure 1). The NWIC, an affiliate of the State of California Office of Historic Preservation (OHP), is the official state repository of cultural resources records and reports for San Mateo County.

The NWIC records search did not identify any previously recorded cultural resources in the Project area or within the 0.25-mi search radius. One previous cultural resource study was conducted within the Project area, and seven within the search radius were on file at NWIC. These studies included records searches, literature reviews, and field surveys (Table 1 and Table 2). No cultural resources were identified by these studies.

LITERATURE REVIEW

In addition to conducting a records search at NWIC, PaleoWest examined standard sources of information that identify known and potential historical resources to determine whether any buildings, structures, objects, districts, or sites had been previously recorded or evaluated in or near the Project area. This included a review of the California Historical Landmarks and Points of Interest publications and updates, the California OHP Built Environment Resource Directory (BERD) for San Mateo County, the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), and any available local registers. Historic-era maps and aerial photographs of the Project area were examined to identify the potential for historic-period (45 years and older) cultural resources within or adjacent to the Project area.

The closest known historic resources to the Project area include the NRHP-listed Burlingame Southern Pacific Railroad station constructed in 1894 at 290 California Drive and the locally designated Severn Lodge Dairy Wallscape mural painted on the side of the building at 220 California Drive. Both resources are approximately 0.80 mi south of the Project area (EnvisionBurlingame.org 2021; National Park Service [NPS] 2021).

HISTORICAL CONTEXT

The 10.2-acre Project area is part of 155 acres of reclaimed tidelands along the San Francisco Bay that were initiated by commercial real estate developers and brothers David and George Keyston in 1962 (Figure 3). The Keyston brothers formed Reclamation District No. 2097 and hired a civil engineer to develop a plan to reclaim the 155 acres to create a light-industrial and commercial development. The development would be created in segments and would require 3,450,000 cubic yards of fill at an estimated cost of $3,100,000 (San Mateo Times 1962, 1963).

The first phase of reclamation efforts was the construction of a dike around the perimeter of the 155 acres and fill was excavated from the baylands and placed at the eastern and western peripheries. The eastern segment was developed as the 40-acre rectangular plan Anza Airport Park and was completed in 1964. This segment is physically separated from the remainder of the development by the man-made Sanchez Creek, a north-south trending channel, which was designed in response to concerns about drainage that could affect the adjacent county beach and park at Coyote Point. The first business to build on the newly reclaimed land on the east end of the development was a four-sided drive-in movie theatre in the middle of the 40-acre section (Figure 4 and Figure 5) (San Mateo Times 1962, 1964; USGS 1965).

Protests by the State Lands Commission over permitting and legality of reclamation of the tidelands slowed the Keyston brothers' further reclamation efforts. Some fill was added to the west and east ends and a bridge to carry vehicular traffic over Sanchez Creek was installed in the summer of 1968. The map for the final unit in the subdivision, where the Project area is, was preemptively filed with the County Recorder in 1969 before the reclamation of that portion of the development was complete. In 1971, the Keyston brothers, under their company Anza Pacific Corporation, purchased a 1922-constructed military transport ship moored in Jack London Square in Oakland that had been converted into a restaurant. Anza Pacific Corporation paid to have the ship towed to Sanchez Creek and it was moored within the current Project area. Many restaurant iterations operated within the ship that remained at this location until 2014 when it was towed to the Port of Stockton (Oakland Tribune 1971; RecordNet.com 2014; San Mateo County Recorder 1969; San Mateo Times 1968, 1972b).

Reclamation efforts continued in earnest after 1972 when Anza Pacific Corporation, the State Lands Commission, and the U.S. Army Corps of Engineers agreed upon the creation of a 12-acre lagoon along the northern boundary on the east end of the development. The lagoon was constructed as a mitigation measure to reduce the impacts of the reclamation project on the environment. The Project area was completed by 1973, and the following year, the 12-acre lagoon was completed and the entire 155 acres were reclaimed (Figure 6) (San Mateo Times 1972a, 1972b; USGS 1973, 1974).

Since completion, the Project area has remained undeveloped. A section on the east end was paved to serve as a parking lot for the ship restaurant and a small section on the west end was cleared and surfaced with gravel. This unpaved gravel area was occasionally used as overflow parking for an adjacent restaurant to the west until 2020, when SPHERE as the lessee took over management of the parcel and installed vehicular barriers to prevent loitering and ongoing trash accumulation and dumping.

PRECONTACT SITE SENSITIVITY ANALYSIS

The Project is in an area where it has the potential to affect buried prehistoric and historical archaeological resources. Geoarchaeological modeling can be used to quantify this potential and potentially identify depths at which buried soils and zones of higher sensitivity may be present. This section presents the results of geoarchaeological modeling for the Project area and the associated landform. The resultant geoarchaeological model was developed from a review of geological literature and geology maps; modern and historical aerial imagery, maps, and charts; historical ecology; and LiDAR elevational modeling.

GEOLOGICAL SETTING

An understanding of the geological setting and paleoenvironment of the Project area helps to establish both the potential for archaeological resources within the proposed area of construction impacts and the depths at which historical features and prehistoric or historic archaeological deposits might be expected to be found.

The San Francisco Peninsula is part of the Coast Ranges geomorphic province, with hills formed by Pliocene and Pleistocene deformation and fracturing of sedimentary Franciscan Complex rocks formed in the Jurassic and Cretaceous Periods 160–70 million years ago. Estuarine sediments, such as the Yerba Buena Mud, or "Old Bay Clay" (ca. 125,000 Before Present [B.P.]) and terrestrial sediments such as the Colma Formation (deposited prior to 11,000 B.P.), and Holocene dune sand (from ca. 11,000 B.P.) were deposited over bedrock as sea levels fluctuated over time.

During the last glacial maximum, approximately 22,000 years B.P., large ice sheets covered portions of the globe producing worldwide sea levels a minimum of 100 meters (m) (328 feet [ft]) lower than today (Byrd et al. 2010). The Californian coastline was between 25–50 km (15.5–31 mi) west of its current location and the San Francisco Bay was a broad inland valley, referred to by today's geologists as the "Franciscan Valley." The runoff from the Sacramento and San Joaquin Rivers converged in the valley to form the "California River," which flowed through the

Carquinez Strait and into the Franciscan Valley. Runoff from smaller streams and rivers draining this valley merged into the river, which emptied into the Pacific Ocean near the current location of the Farallon Islands. The Franciscan Valley supported grassland and riparian plant and animal communities. The melting of the ice sheets and concurrent rising of the oceans pushed the Californian coastline eastwards. Until 7,000 B.P., sea levels rose rapidly at an average rate of 6.7 m (almost 22 ft per 1,000 years). The lower elevations of the Franciscan Valley and California River were inundated during this period, creating San Francisco Bay.

Between 7,000–6,000 B.P., there was a decline in the rate of sea level rise worldwide, and, locally, inundation of the Franciscan Valley continued more gradually (Byrd et al. 2010). After about 4,000 years ago, as the rate of sea level rise continued to slow, sediments carried into the newly formed bay were deposited near the shoreline by creeks, and other sources began to aggrade at the same rate or faster than the rate of inundation forming deltaic deposits, tidal flats, and tidal marshes. During this time in the middle Holocene, extensive tidal marsh deposits developed around the Bay. Large alluvial floodplains formed from material deposited in the lower reaches of streams and river channels, and where these alluvial surfaces were relatively stable, paleosols (prehistoric surface soils) formed. Near the bay shoreline, bay mud and marsh deposits buried Holocene-age land surfaces in areas where these had not been eroded away by the rising bay. Throughout the late Holocene, the San Francisco Bay grew, marshlands expanded, and large tidal mudflats and peat marshes continued to form.

The Colma Formation (adapted from Graymer 2018; Johnson and Bartow 2018) consists of a grouping of members, including beach sand, alluvium, and colluvium that overlie the Merced Formation and Franciscan Complex and is primarily located in southwest San Francisco. Near the Project area, the formation is mostly found along the margins of San Francisco Bay and consists of poorly consolidated to unconsolidated fine-grained sand and silt representing non-marine deposits as well as near-shore, fore-shore, and back-shore beach deposits with a thickness that can exceed 60 m. The formation was deposited between 130,000 to 11,000 years ago during a time when sea levels were lower, and therefore, the deposits fill many near-shore underwater valleys. The age of this formation predates human habitation in the region, and therefore, the possibility of finding cultural materials incorporated into Colma Sand is low to none. However, it represents a significant stratigraphic marker for the lowest depth of cultural materials. Where exposed, the surface of this formation will likely have formed paleosols and the contact may be sensitive for buried resources.

The Young Bay Mud (YBM) are soft, water-saturated, estuarine deposits found in southern San Francisco Bay and the present-day and past marshlands bordering the bay that date to less than 10,000 years (McDonalds et al. 1978) that are being actively deposited. On-shore, YBMs tend to be found along the bay coast where historically tidal marshes were found that are now buried by artificial fill. YBM is typically highly plastic silty clay that contains interbeds of fluvial silty to clayey sand lens from near-shore streams. YBM is often subdivided into two types, including soft organic-rich clay, which was deposited offshore, and sandy/silty clay to silty sand, which represents near or onshore deposition.

BURIED SITE SENSITIVITY

The Project area is on the western side of the San Francisco Peninsula, about 26 kilometers (km) (16 mi) south of Carquinez Strait in a shallow embayment between San Mateo Point (now Coyote Point) and San Bruno Point (USGS 1892). At current sea levels, the Project area is

offshore near an alluvial plain extending northeast into the valley from Buri Buri and Sawyer Ridges. East of the Project area is Coyote Point, consisting of sandstone and chert of the Franciscan Complex (Pampeyan 1994). The alluvial plain is Pleistocene and Holocene alluvium with alluvial deposits extending to the historical shoreline south of Project area and likely dipping beneath. Marsh deposits overlie the lower portions of the plain along the coast and are present near Coyote Point to the south and east and along the coast to the north, averaging about 1 km wide. Colma Formation deposits unconformably overlie older portions of the plain to the south and west of the Project area. Several small unnamed creeks debouch onto the plain to the southwest of the Project area, not reaching the Bay, while San Mateo Creek flows into the marshes southeast of the Project area.

The Project area is on reclaimed land consisting of fill emplaced in San Francisco Bay in the 1960s. Prior to 1969, emplaced fills lacked regulation and have limited resistance to earthquake induced liquefaction, making them unsafe for construction (Hitchcock et al. 2008). The filled area consists of approximately 263 acres of reclaimed land extending northward 550 m (1,800 ft) from the former natural shoreline into the Bay. The constructed landform ranges (LiDAR surface elevation models; ESRI 2024) between less than a meter to about 20 m (66 ft) above mean sea level with elevations in the Project area ranging between 2.5 and 4.0 m (9 to 13 ft). Review of modern aerials (ESRI 2024) shows that most of the surface of this landform is covered by commercial structures, parking, and recreational space. The Project area is open space consisting of grassland and a few trees.

Review of historical ecology models (San Francisco Estuary Institute [SFEI] 1998) based on T-Sheets and historical mapping of the Bay models the former coastline in the mid-nineteenth century prior to the development of the Peninsula. This model indicated that the former coastline was just to the north of Interstate 101 and consisted of a very narrow north-facing beach with grasslands and chaparral extending to the south. A small natural pond was to the west and several creeks draining Buri Buri Ridge debouched onto the landform but did not reach the Bay. To the east on the inland side of Coyote Point, extending to the south, was a tidally influenced marsh associated with San Mateo Creek. To the north, a tidal marsh was present extending up to San Bruno Point. Tidal flats extended 330 m (1,000 ft) northward from the beach south of the Project area, widening to the north. The area underlying the Project area specifically was mapped as shallow bay, and a historical map of San Francisco Bay (USGS 1862) indicates a water depth of less than 1 m (1 to 3 ft) where the Project area is now located (modern bathymetric data [Fregoso 2020] indicate a similar depth of 0.5 to 1.5 m (1 to 5 ft) west of the Project area).

Geologic mapping (Pampeyan 1994) of the alluvial deposits immediately south of the Project area indicate the presence of Holocene medium-grained alluvium (Qam). The alluvium is unconsolidated to moderately consolidated moderately sorted sand and silty to clayey sand. This deposit locally contains interbeds of well-sorted clay, silt, and gravel, indicative of past pannes or ponds and creeks. The estimated thickness of this deposit is 20 to 30 ft. Cross sections of the Bay indicate a pattern of where Holocene alluviums dip beneath estuarine deposits (YBM or marsh) and extend several kilometers into the Bay (Atwater et al. 1977). These deposits overlie Pleistocene aged alluvium and older estuarine deposits.

On shore, Colma Formation deposits discontinuously cover portions of the Pleistocene alluvial deposit about 1 to 2 km south and west of the Project area. Off-shore, presumably overlying Qam deposits as they dip northeastward into the Bay beneath the Project area, is YBM (Qhbm).

It is unknown if the Colma Formation extends into the Project area overlapping older alluvium. YBM thickness beneath the Project area is estimated at 1 to 2 m (3 to 7 ft) based on maps showing thickness of YBM (McDonalds et al. 1978) for the Bay area modeled from nearby coring data. Compression and surface disturbances during the emplacement of fill have likely affected this thickness. Upper contact of Holocene deposits can be estimated at 1.5 to 3 m (5 to 10 ft) below mean sea level (bmsl) by adding former water depth and YBM thickness. Depth to bedrock is estimated at between 200 to 300 ft deep (Brabb et al. 1998), also derived from coring data.

Review of sea level rise curves suggest that sea levels in the Bay were down 1.5 to 3.0 m approximately 2,000 to 3,500 years ago (cal B.P.; Meyer 2014; Meyer et al. 2013) marking a terminal date for exposure of the area beneath the Project area prior to inundation. At this point, depositional processes shifted from terrestrial to estuarine and the accumulation of YBM began. The effects of the transgressing shoreline on the Holocene alluvial surface (and associated potential paleosol) are unknown. Prior to this period, typical alluvial geomorphic processes will have occurred. This may include erosion in the form of sheet wash and incision as creeks meander over the landform and deposition from sheet flow, flooding, ponding, and debris flows. During periods of stability, there is the potential for the development of soils, which may be highly sensitive for buried prehistoric resources, and there is potential for paleosols on the surface and within the deposit.

Based on this review, it is possible to model the stratigraphy beneath the Project area and identify depths of sensitivity for historic-period and prehistoric resources. The thickness of the fill can be estimated at 3.0 to 5.5 m (10 to 18 ft) depending on levels of disturbance, compression, and subsidence of the YBM. Fill will overlie YBM with an estimated thickness of 1 to 2 m (3 to 7 ft). Underlying YBM, Holocene alluvium is estimated at a depth of 1.5 to 3.0 m (5 to 10 ft) bmsl with an unknown thickness, although geologic mapping estimates the thickness of this unit at 6 to 9 m (20 to 30 ft). Holocene age alluvium will overlie Pleistocene alluvial deposits at an unknown depth.

The upper contact of YBM may be sensitive for historic material or sites, such as shipwrecks, pilings and duck blinds, marine resource extraction sites, or other features. The level of disturbance here is unknown and site integrity may be variable. The emplacement of fill may have caused considerable damage to this layer by crushing, mixing, and reworking deposits.

The upper contact of Holocene age alluvium at an elevation 1.5 to 3.0 m bmsl has the potential for a buried paleosol. The level of preservation for this surface is a function of effects on inundation, and sea level rise along with the resultant beach transgression, which may have caused erosion through wave action. However, marsh formation or inundation may have led to a high degree of preservation. This contact is highly sensitive for prehistoric resources and the underlying Holocene deposits are moderately sensitive where paleosols are not present. The upper contact of Pleistocene alluvial deposits, if a paleosol is present, is also highly sensitive for prehistoric deposits.

Most proposed actions for the Project will not have potential to affect buried resources. Trenching and installation of pile caps or footings will not exceed the depth of fill and will not affect the surface of YBM deposits of underlying alluvium. However, the estimated depths of auger piles will range between 14 to 18 m (45 to 60 ft) below the surface, which will affect the upper contact of both the Holocene alluvium and YBM. There is also potential that auger piles may affect the upper contact of Pleistocene aged alluvium.

CONCLUSIONS

Overall, any Project impacts exceeding 3 m (10 ft) in depth have the potential to affect buried historic-period or prehistoric cultural resources. The upper contact of YBM at 0.5 to 1.5 m bmsl and upper contact of Holocene alluvium at 1.5 to 3.0 m bmsl are highly sensitive zones. The depth for the upper contact of Pleistocene aged alluvium is unknown, yet also highly sensitive if encountered. Holocene-aged deposits below 1.5 to 3.0 m are moderately sensitive. Auger piles have the potential to affect all three highly sensitive zones. It is recommended that prior to construction, a qualified geoarchaeologist conduct geomorphic testing of these zones using direct push coring. Depending on results, monitoring may be required during this and other construction activities exceeding 3 m.

BUILT ENVIRONMENT SITE VISIT

Chronicle Heritage Associate Architectural Historian Hannah Goldman, M.A., conducted the built environment survey of the Project area on September 9, 2024. Goldman completed the pedestrian survey beginning at the northeast corner of the parking lot for Kincaid's Fish, Chop, and Steakhouse and worked along the fenced perimeter to the south and east to locate the access point to the property (APN 026-363-600). Goldman surveyed along the nearest street, Bay View Place, and worked from the southeast to the north along Airport Boulevard.

The survey covered up to the bridge parcel (APN 026-363-610) and then, north until the edge of the infill, the parking lot, and the western edge of the fenced area. In the western edge of the fenced area, Goldman identified a concrete foundation about 20 ft by 20 ft wide, located about 190 ft north of Airport Boulevard and approximately 150 ft from the canal. Next to the canal were concrete structures that led to a structure that used to be in the canal, including a concrete set of risers for outdoor seating and semi-circular viewing platforms. The area contained no other built environment resources and was characterized by poor ground visibility due to dense ruderal species. Modern trash was identified in the vacant center portion of the property, and signs of wildlife including tracks, bioturbation, and scat were noted throughout the site.

Post-survey research revealed that the platforms and parking lot identified at the eastern end of the property during the pedestrian survey were once a parking attendant hut and waiting area for a now non-extant floating restaurant called the Sherman, a longtime Burlington attraction that closed in 2020 (Clifford 2020).

RESULTS AND RECOMMENDATIONS

The records search and a review of archival maps and aerial photographs did not identify prehistoric or historical archaeological resources within the Project area. Archival maps and aerial photographs indicate that the Project area was created with fill between 1972 and 1973. Based on the results of the records search and map review, the likelihood of Project impacts to archaeological resources is low. However, it cannot entirely be ruled out that archaeological cultural resources could be encountered during Project construction activities. Should such deposits be encountered during Project ground disturbance, a substantial adverse change in the significance of an archaeological resource or historical resource would occur from its demolition, destruction, relocation, or alteration such that the significance of the resource would be materially impaired (CEQA Guidelines Section 15064.5(b)(1)-(c)(1, 2)). To mitigate this potential impact, the recommendations below, should be implemented.

It is always possible that unexpected finds may occur during Project construction. The following procedures should be used if archaeological deposits are identified during Project activities:

> If deposits of precontact or historical archaeological materials are encountered during Project activities, all work within 25 ft of the discovery should be redirected and a qualified archaeologist should be contacted to assess the situation, consult with agencies as appropriate, and make recommendations for the treatment of the discovery. Project personnel should not collect or move any archaeological materials. Archaeological materials can include flaked-stone tools (e.g., projectile points, knives, and choppers) or obsidian, chert, basalt, or quartzite toolmaking debris; bone tools; culturally darkened soil (i.e., midden soil often containing heat-affected rock, ash and charcoal, shellfish remains, bones, and other cultural materials); and stone-milling equipment (e.g., mortars, pestles, and handstones). Prehistoric archaeological sites often contain human remains. Historical materials can include wood, stone, concrete, or adobe footings, walls, and other structural remains; debris-filled wells or privies; and deposits of wood, glass, ceramics, metal, and other refuse.

It is recommended that significant impacts to archaeological deposits be avoided by Project activities. If such deposits cannot be avoided, they should be evaluated in consultation with the City for their inclusion on the CRHR. If the deposit is eligible for the CRHR, significant impacts to the deposit will need to be avoided or such impacts must be treated. If treatment is required, a plan should be developed in consultation with the City to mitigate, avoid, or minimize impacts. Treatment may consist of systematic recovery and analysis of archaeological deposits, recording the resource, preparation of a report of findings, accessioning recovered archaeological materials at an appropriate curation facility, and community outreach.

Sincerely,

PALEOWEST

Garret Root, M.A. | Office Principal / Historical Resources Program Manager

Appendix D
CAP Checklist

City of Burlingame Climate Action Plan
Consistency Checklist for New Development

The purpose of this Checklist is to ensure that development projects comply with Burlingame's 2030 Climate Action Plan Update (CAP) and may be eligible for streamlining the greenhouse gas (GHG) analysis for California Environmental Quality Act (CEQA) review.

The Checklist applies to projects 10,000 sq. ft. and larger and/or six units or more. To be considered consistent with Burlingame's CAP, projects must comply with the land use designations in Burlingame's General Plan and implement at minimum the required CAP measures listed in the Checklist. Projects may then rely on the City's CAP and related environmental review for the impact analysis of GHG emissions, as allowable under CEQA.

The Checklist contains measures from the CAP that pertain to new development. Each measure is noted as either required or voluntary. Required measures are mandated by local or state ordinances. The voluntary measures represent goals of the City and projects are encouraged to address them.

Proposed project that require a General Plan amendment or rezoning and/or do not address the required measures may have to prepare a project-specific GHG analysis and identify appropriate mitigation measures.

Project Information

Proposed land use (residential, commercial, industrial, mixed use, or other): Other/Commercial

Brief project description: Public Nature and Recreation park with Education and Event Center on State-owned parcel

Project size (sq. ft. and/or unit size): 10.2 acres (property size), 9.4 acres (land area)

Is the proposed project seeking a General Plan amendment or rezoning? ❑ Yes ☒ No

If yes, briefly explain why: _____

Climate Action Plan Measure	Project Compliance
REQUIRED MEASURES	
Green Building Practices and Standards (CAP Measure 11): Support, enforce, and expedite green building practices and standards. Burlingame's reach codes: www.burlingame.org/reachcode	**Required Measure** Does the project comply with the City's green building requirements in the reach codes? ☒ Yes ❑ No Required measures are currently in plans or could be added if required. TDM study has not been completed, please advise if it is required for this project. Will the project request any exceptions? If so, briefly explain.
Alternatively-Powered Residential Water Heaters (CAP Measure 15): Support transition from traditional to solar and electrically powered water heaters. Burlingame's reach codes: www.burlingame.org/reachcode	**Required Measure** Does the project include a solar or electrically powered water heater as required in the reach code? ❑ Yes ❑ No NA: Non residential.
Solar Power (CAP Measure 14): Encourage installation of photovoltaic systems. Burlingame's reach codes: www.burlingame.org/reachcode	**Required Measure** Does the project include a photovoltaic system as required by CALGreen and/or the City's reach code? ☒ Yes ❑ No PV system is currently in plans. 5 kw minimum for 10,000 sf + protect size, approx 300 sf of area.
Electric Vehicle Infrastructure and Initiatives (CAP Measure 6): Support the electric vehicle (EV) network by incentivizing use of EVs and installations of charging stations. Burlingame's reach codes: www.burlingame.org/reachcode	**Required Measure** Does the project comply with the City's EV charging requirements in the reach code? ☒ Yes ❑ No List total number and type of EV chargers to be installed: **STALL TYPE** / **PROVIDED** STANDARD 11 VAN ADA 1 ELECTRIC VEHICLE (EV) 4 ELECTRIC VEHICLE (EV) ADA 1 ELECTRIC VEHICLE (EV) VAN ADA 1 FUTURE ELECTRIC VEHICLE (EV) 11 **TOTAL** **29**
Zero Waste (CAP Measure 18): Reduce organic and recyclable materials going to the landfill and achieve the City's diversion goals.	**Required Measure** Does the project include facilities for collecting recycling and composting? ☒ Yes ❑ No Describe any composting and recycling strategies used in the project : Recycling stations typically provided; Compost collection is provided by Recology in standard yard waste bins.

Transportation Demand Management (TDM) (CAP Measure 2): The City shall require new multi-unit residential developments of 10 units or more and commercial developments of 10,000 sq. ft. or more to incorporate TDM strategies that reduce trip generation rates below the standard rate published in the latest Institute of Transportation Engineers (ITE) Trip Generation Manual (10th edition), or other reputable source. TDM measures may include but are not limited to: shuttles, carpool, transit incentives, and car and/or bike share programs. Residential projects of 100 units or more and commercial projects of 100,000 sq. ft. or more shall have a designated TDM coordinator and provide a report to city staff annually on the effectiveness of the TDM plan. ▪ GreenTRIP: http://www.transformca.org/landing-page/greentrip ▪ City/County Association of Governments of San Mateo County, http://ccag.ca.gov/programs/transportation-programs/transportation-demand-management/ City of San Francisco TDM Tool, https://sfplanning.org/resource/transportation-demand-management-tdm-tool	1. Will the project have a TDM program that meets the 20% reduction in trip generation rates when compared to standard ITE trip generation rates? ❑ Yes ❑ No 2. Briefly describe the project's TDM Plan: A separate TDM Plan has been submitted. Requirement is triggered if building area > 10,000 sf. Building floor square footage is less than 10,000. Please advise if a TDM is required for this park use. If required, it would not impact project design but project team would need to confirm feasibility of performing a TDM study and implementing appropriate operations measures.
Parking Pricing, Parking Requirements, and Creative Parking Approaches (CAP Measure 7): Implement parking reduction strategies including, but not limited to, parking lifts, shared parking, and unbundling of parking costs.	**Required Measure** Does the project meet the parking requirements in the zoning code or TDM plan as applicable? ☒ Yes ❑ No ❑ NA Describe any parking reduction strategies used in the project:
VOLUNTARY MEASURES	
Peninsula Clean Energy ECO100 (CAP Measure 13): Increase enrollment in PCE's standard option, ECOplus, for 100% GHG free energy; or PCE's premium option, ECO100 for 100% renewable energy. https://www.peninsulacleanenergy.com/opt-up/	**Voluntary Measure** Will the project enroll in PCE? ❑ Yes ❑ No Project team will investigate green power purchasing Which PCE option, ECOplus or ECO100?

Complete Streets (CAP Measure 3): Develop a network of complete streets that support pedestrian and bicycle accessibility.	**Voluntary Measure** Does the project include on-site pedestrian, transit, or cycling improvements, such as enclosed bike storage or employee showers? ☒ Yes ❑ No ❑ NA What is the project's walkscore (www.walkscore.com)? Walkscore is 38. Describe any pedestrian/bicycle friendly measures used in the project: Project will provide a Class 1 bike lane on the improved Bay Trail, and outdoor bicycle parking on site. Enclosed bike storage and shower would not be appropriate for this park use.
Burlingame Shuttle Service (CAP Measure 8): Increase awareness and use of local shuttles. Burlingame shuttle map: https://www.burlingame.org/departments/sustainability/shuttles.php	**Voluntary Measure** Is the project located near a shuttle station? ☒ Yes ❑ No Orange: SW corner of Airport Blvd. & Bay View Pl. Blue line trolley at Hilton SFO, 562 Airport Blvd; Red Line at Embassy Hotel, 100 Anza Blvd; How will shuttle information be distributed to occupants? To be determined for park operations.
Water Conservation for New Residential Developments (CAP Measure 17): Implement water conservation elements beyond CALGreen requirements, such as efficient landscaping and Energy Star rated appliances. Water Conservation Resources, https://www.burlingame.org/departments/public_works/water_conservation/index.php	**Voluntary Measure** Does the project use Energy Star® rated dishwashers and clothes washers or go beyond CALGreen? ❑ Yes ❑ No ☒ NA Describe any water conservation elements in the project: NA: Non residential.
Construction Best Management Practices (CAP Measure 10): Require projects to implement the Air District's Best Practices for Construction; and use electrically-powered construction equipment as available and feasible.	**Voluntary Measure** Will the project use any electric off-road construction equipment? ❑ Yes ❑ No To be determined If yes, describe what electric construction equipment will be used: The project team will make best efforts to use electric construction equipment when feasible/appropriate.

Increase the Public Tree Population (CAP Measure 20): Increase the number of trees in Burlingame.	**<u>Voluntary Measure</u>** Will the project be adding new trees? ☒ Yes ❑ No ❑ NA How many trees will be planted in the public right-of-way (like sidewalks)? How many trees will be planted on private property? Per the February 2024 Planning Drawings, 108 trees will be planted at the project site. The exact number of trees will be determined in the Building Department phase.

Appendix E
Limited Phase I ESA

Memorandum

To:	Ruben Hurin, Planning Manager City of Burlingame, Planning Division
From:	Mario Barrera, Senior Technical Specialist, ICF Devan Atteberry, Project Manager, ICF
Date:	May 6, 2024
Re:	**Bay Rise Park Project, 410 Airport Boulevard, Limited Phase I Environmental Site Assessment**

ICF is pleased to submit this Limited Phase I Environmental Site Assessment (Limited Phase I ESA) in support of the environmental documentation being prepared for the Bay Rise Park Project at 410 Airport Boulevard (Project or Proposed Project). This memorandum summarizes the work performed and identifies potential exposure risks related to contamination from historical land uses conducted on either the Project site or sites in the vicinity of the Project site.

Project Description

The Proposed Project would redevelop an approximately 10.2-acre parcel (9.4 acres of land and 0.83 acres in Sanchez Channel) in the Bayfront area of Burlingame, California. Specifically, the Proposed Project would transform the parcels at 410 Airport Boulevard into a public nature and recreation park with an approximately 8,600-square-foot (sf) education center/event building (approximately 14,000 including roof overhang), and a drop-off loop and one-way drive, which would enter the Project site from Airport Boulevard and exit onto Bay View Place. The Proposed Project would provide 28 on-site parking spaces. There is no street parking currently available along Airport Boulevard and Bay View Place. However, the City is considering allowing street parking on both sides of Bay View Place, which would make available approximately 30 parking spaces. In addition, the Proposed Project would restore the natural tidal-marsh ecology of the portion of San Francisco Bay (Bay) shoreline within the Project site by regrading the site to form a tidal marsh and planting native plant species. It would also improve the section of the Bay Trail on the Project site, facilitate water access and recreation with water access ramps for kayaking and board sailing, and provide new viewing decks and patios, a small take-out café, multi-purpose and lawn areas, secondary trails throughout the site, an interpretive program, and interpretive elements related to sea-level rise resiliency demonstration. The Project would also incorporate a small building (approximately 20 feet by 30 feet) to store jet skis, personal protective equipment, and rescue equipment required by the Central County Fire Department (CCFD), and an approximately 12 feet x 20 feet trash enclosure building.

Environmental Setting

The 10.2-acre Project site (9.4 acres of land and 0.83 acres in Sanchez Channel) is in the northeastern portion of Burlingame, between U.S. 101 and the San Francisco Bay. The Project site is in a developed and urbanized area of the city at the south end of the Bayfront area. The southern portion of the Project site is bounded by Airport Boulevard and Bay View Place, which borders four adjacent office developments at 411 Airport Boulevard, 433 Airport Boulevard, 500 Airport Boulevard, and 533 Airport Boulevard. The eastern portion of the Project site is bounded by a surface parking lot and restaurant. The northern portion of the Project site fronts onto the San Francisco Bay; the eastern portion of the site fronts onto Sanchez Creek.

The Project site includes assessor's parcel numbers (APNs) 026-363-600 and 026-363-610, which are leased from the State Lands Commission (SLC). Currently, the site is a vacant lot within historical baylands. The site comprises developed and/or landscaped areas, open water (i.e., an intertidal rocky shoreline/mudflats), ruderal grassland, and seasonal wetland habitats. The majority of the Project site consists of ruderal upland habitat, with a few non-native shrubs and trees scattered around the site. In addition, an unimproved portion of the Bay Trail is located along the northern edge of the Project site, and an unused gravel parking lot is located at the western edge of the Project site. There is also an abandoned paved parking lot on the eastern edge of the site, along with other hardscape infrastructure associated with a former restaurant. A Federal Aviation Administration (FAA) tower associated with San Francisco International Airport is located on an easement within this eastern parking lot. The easement is currently leased from SLC.

The Project site is relatively flat, with ground surface elevations ranging from 6 to 15 feet.

Environmental Database Search and Historical Records Review

The scope of services for this ESA included a records review to determine the likely presence of established hazardous waste sites and contaminated sites within the Project site or in the area surrounding it. The records review analyzed a database search performed by EDR Lightbox. The EDR Lightbox corridor report encompassed database information from all documented hazardous waste sites and potentially contaminated sites within a 1-mile radius of the Project site. A copy of the EDR Lightbox corridor report is provided as Attachment 1. A site visit was not conducted as part of the Limited Phase I ESA. A complete list of the government records that were searched, as well as the results of the database search, is presented in the *Map Findings Summary,* beginning on page 4 of Attachment 1. Descriptions of the databases are provided beginning on page GR-1 of Attachment 1. Also, in support of this Limited Phase I ESA, ICF personnel conducted a historical records review to get a better understanding of historical land uses on the Project site and in the surrounding area. Aerial photographs and topographic maps reviewed are included in Attachment 2 to this memorandum.

Methodology

A search for environmentally related information present in publicly accessible databases was conducted by EDR Lightbox in 2023. The EDR Radius Map report was reviewed by ICF to determine if the Project site or adjacent properties were listed in any environmental database of note. The information provided in these databases was used to determine whether the Project site itself or

adjacent properties have the potential to negatively affect the Proposed Project. The database review included a search for sites within a 0.5-mile radius of the Project site with a history of releases into the environment. Sites within a 0.5-mile radius with a history of releases into the environment were identified because they are the most likely sites to produce a detrimental condition in the Project area. Aerial photographs and topographic maps (also provided by EDR Lightbox) were reviewed and interpreted to develop a more complete understanding of historical land uses and assess the development of areas of concern (e.g., trash dumps, junkyards).

Environmental Database Results

The database review identified six sites within a 0.5-mile radius of the Project site with a history of a release. The six sites are listed in Table 1, which provides the addresses, the distances from the Project footprint, the databases the sites were found in, and a summary of each site's current status. Environmental data pertaining to sites beyond 0.5 mile from the Project site with a history of a release were also reviewed by ICF personnel. None were determined to pose an exposure risk for the Project.

Table 1: Sites within 0.5 Mile of the Project Site with a History of a Release

Site	Address	Distance from Project Footprint	Database(s)	Site Status Summary*	Affected Media	Recommendations
Caruff California Corp.	350 Airport Bl, Burlingame	0.083 mile to the east	LUST, Cortese, HIST CORTESE, CERS, SWEEPS UST, CA FID UST, San Mateo Co. BI, Notify 65	The site is listed in the LUST database as having a gasoline release to groundwater. The release was identified in June 1989. The case was listed as *Completed – Case Closed* as of October 1993. Closure was granted to the site by the San Mateo County Local Oversight Program (LOP). None of the other listings represent an exposure risk for the Project.	Groundwater	None. The site received closure as of October 1993. No additional violations were noted.
Anza Park & Fly	615 Airport Bl, Burlingame	0.180 mile to the southwest	LUST, HIST UST, Cortese, CERS, CERS HAZ WASTE, HWTS, HAZNET, RCRA NonGen/NLR, SWEEPS UST, CA FID UST, San Mateo Co. BI	The site is listed in the LUST database as having a diesel release to groundwater. The release was identified in April 1999. The case was listed as *Completed – Case Closed* as of March 2000. Closure was granted to the site by the San Mateo County LOP. Various violations were noted in the CERS database; however, all violations were of an administrative nature and did not involve releases to the environment. None of the other listings represent an exposure risk for the Project.	Groundwater	None. The site received closure as of March 2000. Other violations were of an administrative nature.

Site	Address	Distance from Project Footprint	Database(s)	Site Status Summary*	Affected Media	Recommendations
Golden Gate Drywall	399 Beach Bl, Burlingame	0.213 mile to the south-southeast	LUST, HIST UST, HIST CORTESE, Cortese, CERS, HWTS, RCRA NonGen/NLR, SWEEPS UST, CA FID UST, San Mateo Co. BI	The site is listed in the LUST database as having a gasoline release to groundwater. The release was identified in November 1993. The case was listed as *Completed – Case Closed* as of October 2002. Closure was granted to the site by the San Mateo County LOP. None of the other listings represent an exposure risk for the Project.	Groundwater	None. The site received closure as of October 2002. No additional violations were noted.
Real Estate North Investment Partnership, LP	370 Lang Rd, Burlingame	0.267 mile to the south-southeast	LUST, CPS-SLIC, Cortese, CERS	The site is listed in the LUST database as having a gasoline release to groundwater. The release was identified in April 2007. The case was listed as *Completed – Case Closed* as of January 2012. Closure was granted to the site by the San Mateo County LOP. The site was also listed in the CPS-SLIC as having a tetrachloroethylene (PCE), trichloroethylene (TCE), and vinyl chloride release to groundwater. The release was reported in November 2007 and granted closure in August 2012. Closure was granted to the site by the San Mateo County LOP.	Groundwater	None. The site received closure in January and August 2012 for the two incidents listed. No additional violations were noted.

Site	Address	Distance from Project Footprint	Database(s)	Site Status Summary*	Affected Media	Recommendations
Sprint	828 Airport Bl, Burlingame	0.447 mile to the west	LUST, HIST CORTESE, Cortese, CERS	The site is listed in the LUST database as having a gasoline release to groundwater. The release was identified in October 1998. The case was listed as *Completed – Case Closed* as of October 2000. Closure was granted to the site by the San Mateo County LOP. None of the other listings represent an exposure risk for the Project.	Groundwater	None. The site received closure as of October 2000. No additional violations were noted.
Hamblin Trust	1065 Amphlett Bl, San Mateo	0.475 mile to the southeast	LUST, Cortese, CERS	The site is listed in the LUST database as having a benzene, toluene, diesel, and gasoline release to groundwater. The release was identified in November 2011. The case was listed as *Completed – Case Closed* as of December 2014. Closure was granted to the site by the San Mateo County LOP. None of the other listings represent an exposure risk for the Project.	Groundwater	None. The site received closure as of December 2014. No additional violations were noted.

Historical Records Review

Aerial Photographic Review

EDR Lightbox conducted a search of available aerial photographs and topographic maps to assist in evaluating historical usage of the Project site and adjacent properties. A summary of the photographs and maps reviewed is provided below. The review of the aerial photographs did not reveal any historically hazardous conditions within the Project footprint or in the vicinity of the Project site.

1943 through 1963: The 1943 U.S. Department of Agriculture (USDA), 1946 and 1956 U.S. Geological Survey (USGS), and 1963 EDR Proprietary Aerial Viewpoint aerial photographs do not show any development within the Project footprint. The 1963 aerial depicts a U-shaped frame where the Project site and historical Bayfront area will be developed.

1968: Similar to the previous photographs, the 1968 USGS aerial photograph depicts the Project footprint as undeveloped (with fill in the Project area). However, the area east of the Project site, across a narrow channel, now appears semi-developed, with several structures on the south side, the side closest to the Bayshore Freeway.

1974: The USGS 1974 aerial photograph depicts fill throughout the Project site and in the immediate area. A small concrete rectangle now appears on the eastern part of the Project footprint; the area is being used as a parking lot. Anza Lagoon is now visible, as is Airport Boulevard, which bisects the Project area. The Project site's immediate surroundings (west of the narrow channel) are largely vacant, with only one structure visible and a large parking lot on the south side of Airport Boulevard. A large (square) structure and a smaller rectangular structure now appear on the north side of the semi-developed land east of the narrow channel. Additional structures appear on the south side as well.

1982: Additional development along Airport Boulevard is now visible immediately south and southwest of the Project footprint. The structure associated with what is now Kincaid's Fish, Chop & Steakhouse is visible west of the Project site. The Project site remains undeveloped. Additional development appears in the southern part of the area, east of the narrow channel.

1993: The Project site remains undeveloped. Additional development appears to the south, across Airport Boulevard. Additional developments also appear around Anza Lagoon.

1998: The USDA 1975 aerial photograph continues to depict the Project site as undeveloped. Additional development that appears to be a high-rise building and associated parking occurs south of the Project footprint, across Airport Boulevard.

2005: The USDA/National Agriculture Imagery Program (NAIP) 2005 aerial photograph shows the Project site as undeveloped. The land east of the narrow channel appears to be undergoing modifications. The central portion of the area now appears graded.

2009: There are no major, discernible changes between the 2005 photograph and 2009.

2012: Vegetation now appears on the Project site; however, it remains undeveloped. There are no other major, discernible changes between the 2009 photograph and 2012.

2016: Conditions in 2016 appear largely the same as they did in 2012, with the exception of the northern portion of the area (north of Airport Boulevard), east of the narrow channel. It is now a large parking lot. No structures remain in that area.

2020: The Project footprint remains vacant in 2020. The central portion of the area east of the narrow channel is now fully developed with several buildings. It includes a continuation of Airport Boulevard, linking it to Lang Road to the southeast.

Historical Topographic Map Review

EDR Lightbox researched available historical topographic maps for the vicinity of the Proposed Project. ICF reviewed each of the maps provided by EDR, dating from 1896 to 2021. The review of the topographic maps did not reveal any historically hazardous conditions within the Project footprint or in the vicinity of the Project site.

1896 through 1956: All USGS topographic maps within this period depict the Project site and its immediate surroundings as undeveloped, with no fill in place.

1968: The 1968 USGS topographic map now shows fill in the Bayfront area; however, none appears within the Project site. A drive-in theatre appears east of the Project site, across a narrow channel. A sewage disposal feature appears to the west in what is now the Veolia Water North America site.

1973: Fill now appears in the Project footprint and the surroundings. Three structures appear in the area immediately surrounding the Project site to the south and the west. Additional development appears in the area across the narrow channel to the east.

1980: Additional structures appear in the area immediately surrounding the Project site to the south. Anza Lagoon can now be seen. Airport Boulevard appears more prominently in the Project area.

1993: The 1993 USGS topographic map no longer depicts any of the structures in the Project area. Airport Boulevard is a prominent feature in the Project area.

1997: The 1997 USGS topographic map depicts features similar to those on the 1993 map.

2012: The 2012 USGS topographic map depicts Anza Boulevard, Airport Boulevard, and Beach Road, all within the Project area.

2015: The 2015 USGS topographic map depicts the setting around the Project area similar to that on the 2012 map.

2018 and 2021: The 2018 and 2021 USGS topographic maps show a setting similar to that on the 2015 map; however, 2018 and 2021 now display vegetation within the Project footprint.

Conclusions

Information reviewed during preparation of this Limited Phase I ESA did not strongly suggest potential exposure impacts would occur from implementation of the Proposed Project. However, fill material of unknown origin, such as the fill used in the Project area, could be affected by contaminants.

A soil management plan (SMP) was prepared by Langan Engineering and Environmental Services, Inc., in December 2023 in response to sampling conducted on-site in October of 2020 and August of 2022(see Attachment 3). The SMP was prepared with the objective to minimize exposure of potentially hazardous constituents in soil to construction workers, nearby residents and/or pedestrians, and future users of the site. According to the SMP, laboratory analysis concluded that on-site fill material is affected by petroleum hydrocarbons, heavy metals, and asbestos. If disturbed, the presence of these contaminants poses soil management and potential health and safety concerns. As such, it is recommended that the developer/construction personnel implement all protocols found in Section 8.0, *Recommendations for Environmental Management,* of the site-specific SMP during any media-disturbing activities conducted on-site. These measures include, but are not limited to, developing and implementing a health and safety plan, soil management procedures, odor and dust controls, asbestos Airborne Toxic Control Measure (ATCM) compliance, stormwater pollution controls, groundwater management and contingency procedures for unknown or unexpected conditions.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---------- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---------- Federal Facility Site Information listing
SEMS ---------- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---------- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---------- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-LQG ---------- RCRA - Large Quantity Generators
RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System
US ENG CONTROLS ---------- Engineering Controls Sites List

US INST CONTROLS Institutional Controls Sites List

Federal ERNS list

ERNS Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE State Response Sites

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF Solid Waste Information System

RGA LF---------- Recovered Government Archive Solid Waste Facilities List
RGA LUST---------- Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/24/2023 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID:: CAL000469882

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/05/2023 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

CERS HAZ WASTE:
Name: ANZA PARK N SKY
Address: 615 AIRPORT BLVD
City,State,Zip: BURLINGAME, CA 94010
Site ID: 6128
CERS ID: 10066318
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 6128
Site Name: ANZA PARK N SKY
Violation Date: 11-29-2016
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 12/05/2016. The last pickup of oil and coolant was in February 2016. Ensure waste is picked up at least every 6 months. If less drums are needed, get rid of a drum so they can be picked up more often.
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 6128
Site Name: ANZA PARK N SKY
Violation Date: 11-29-2016
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 12/05/2016. Training is provided to new hires, but not annually. Perform training and submit documentation within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

ANZA PARK N SKY (Continued) **S123731894**

Site ID:	6128
Site Name:	ANZA PARK N SKY
Violation Date:	11-29-2016
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/05/2016. The waste antifreeze drum needs to be labeled with a full hazardous waste label. A label was on the used oil filters, but the accumulation start date was not filled in. A label was left on site. Provide proof of labeling within 30 days.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW
Violation Source:	CERS,

Site ID:	6128
Site Name:	ANZA PARK N SKY
Violation Date:	11-29-2016
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 12/05/2016. Inventory only includes used oil filters x 10lbs, new motor oil x 100 gals and new antifreeze x 55 gals. Update the inventory to reflect all hazardous materials/waste over threshold amounts. There is a new oil tank approx 100 gals and a 55 gallon drum of new oil, there are 4 x 55 gallon drums of used oil, 2 x 55 gallon drums of used antifreeze, 1 x 55 gallon drum of used oil filters, two diesel generators (85 gals each) and a 55 gallon drum of soap.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HMRRP
Violation Source:	CERS,

Site ID:	6128
Site Name:	ANZA PARK N SKY
Violation Date:	11-29-2016
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 12/05/2016. The oil filter drum was open and the waste antifreeze container was open. Close all bung caps and place lids on all drums at the end of the day and/or when not working in the area.
Violation Division:	San Mateo County Environmental Health
Violation Program:	HW

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D002
Waste Description: Corrosive Waste

Waste Code: F002
Waste Description: The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: U002
Waste Description: 2-Propanone (I) (Or) Acetone (I)

Waste Code: U003
Waste Description: Acetonitrile (I,T)

COVALENT INDUSTRIAL TECHNOLOGIES, LLC (Continued) **1010313180**

Waste Code: U080
Waste Description: Methane, Dichloro- (Or) Methylene Chloride

Waste Code: U112
Waste Description: Acetic Acid, Ethyl Ester (I) (Or) Ethyl Acetate (I)

Waste Code: U117
Waste Description: Ethane, 1,1'-Oxybis-(I) (Or) Ethyl Ether (I)

Waste Code: U122
Waste Description: Formaldehyde

Waste Code: U123
Waste Description: Formic Acid (C,T)

Waste Code: U154
Waste Description: Methanol (I) (Or) Methyl Alcohol (I)

Waste Code: U213
Waste Description: Furan, Tetrahydro-(I) (Or) Tetrahydrofuran (I)

Waste Code: U220
Waste Description: Benzene, Methyl- (Or) Toluene

Site Name:	PHOENIX PHARMACEUTICALS INC
Violation Date:	07-16-2020
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month

PHOENIX PHARMACEUTICALS INC (Continued) **S113147448**

	if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 08/13/2020. OBSERVED: Used oil appears to be accumulated until the container is full. REQUIRED ACTION: Ensure that the used oil is removed within 180 days of initial generation. Used oil can be taken to the County's VSQG program up to 15 gallons at a time (containers must be 5 gallons or less). Go to http://www.smchealth.org/vsqg to schedule an appointment. Discussed options to accumulate hazardous waste in satellite storage areas to better maximize the amount of time waste is on- site.

Site Name:	PHOENIX PHARMACEUTICALS INC
Violation Date:	03-02-2022
Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	Returned to compliance on 03/29/2023. OBSERVATION: Throughout facility labs, open containers of hazardous waste, hazardous waste containers connected to HPLC did not contain carbon filter or vapor tight fittings. Some containers had paper towels as a stopper. In almost all solvent waste containers in hoods had open funnels that were not closed. CORRECTIVE ACTION: Ensure all hazardous waste containers are kept closed except when actively collecting or pouring. Please keep all hazardous waste containers closed by the "Comply By" date.

Eval Notes: Visited Phoenix Pharmaceuticals for a follow up inspection to close out violations from 3/2/2022 Met with Carlos Carranza who toured me around the facility. Observations: 1) Hazardous waste containers were observed closed throughout the facility. However, HPLC waste bottles did not utilize a closed system with carbon filter and vapor tight fittings. 2) Evidenece of vacuum oil leak on the floor of Lab 8 was no longer present. 3) In the R&D Lab 5, all of the containers were properly closed. No spilled powders were present in the hood or lab benches. 4) In the R&D Lab 5, containers were properly labeled and identified, hazardous wastes were labeled as "waste" with accumulation start date. However, proper hazardous waste labels were not used and not identified with physical state or hazardous properties. 5) A drum of HCl in the waste room is now being used and is considered product. 6) Waste containers were labeled as "waste" and accumulation start date. Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Extracted from Green Environment's July 7, 2010 second quarter 2010 groundwater monitoring report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. Two (2) independent Phase I Environmental Site Assessments (ESAs) were conducted of the subject property by Kleinfelder, Inc. in January 1990 and ERAS Environmental, Inc. (ERAS) in February 2007, respectively. Both of the Phase I ESAs documented that a single 1,000- gallon underground gasoline storage tank (UST) was removed from the subject property in 1985 without the collection of confirmation soil or groundwater samples. It was recommended by both consultants that soil in the vicinity of the former UST be assessed for potential impact by petroleum hydrocarbons. Kleinfelder, Inc. s Phase I ESA also documented extensive paint staining on concrete flooring and around a sewer floor drain within a paint storage room in the northwest corner of the warehouse building on the subject property, and recommended soil sampling in this area to determine potential impact by paints and solvents. Two (2) preliminary subsurface investigations were performed by Green Environment inc. (GEI), the first in April 2007, and the second between December 8, 2007 and February 1, 2008. The subsurface investigations were documented in reports dated April 30, 2007 and April 11, 2008, respectively. The preliminary subsurface investigations were designed to determine the extent of petroleum hydrocarbons related to the former UST and volatile organic compounds (VOCs) related to the former paint storage area, in soil, soil vapor and groundwater at the subject property. Based on the results of the preliminary subsurface investigations, GEI performed interim remediation measures and an additional subsurface investigation between August of 2008 and January of 2009. The activities were summarized in GEI s Subsurface Investigation and Interim Remedial Report , dated March 17, 2009. The interim remediation measures consisted of soil excavations in the vicinity of the former UST and paint storage areas, and dewatering of petroleum hydrocarbon-impacted groundwater from the open excavations prior to backfilling. The purpose of the additional subsurface investigation was to assess the extent of off-site fuel hydrocarbons downgradient of the subject property.Based on review of GEI s Subsurface Investigation and Interim Remedial Report (GEI, March 17, 2009), the SMCoGPP identified data gaps with respect to the subject property meeting low risk criteria and presented those data gaps in a letter dated April 16, 2009. In order to address the data gaps

REAL ESTATE NORTH INVESTMENT PARTNERSHIP LP (Continued) **S108536388**

outlined by SMCoGPP, GEI performed additional work at the SMCoGPP which included the installation of one (1) groundwater monitoring well within the former UST pit area (Well MW-1) as well as three (3) additional down-gradient groundwater monitoring wells (Wells MW-2, MW-3 and MW-4) to monitor and evaluate groundwater quality and flow direction trends over time (Well Installation and Soil Vapor Sampling Report, GEI January 22, 2010). Previous groundwater monitoring events have been conducted on October 9, 2009 and February 10, 2010. This report summarizes the third quarterly monitoring event overall, and the second quarterly event of 2010 (Q2 2010) which was conducted on May 28, 2010.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 02/08/2007
Comments: Meet with Kim, Diane and Mark to discuss the work notice Kim prepared for Burlingame. Based on the significant amount of time that has lapsed since the last communication from DTSC to the community, Fact Sheet was recommended instead of a work notice. It will include the dates of the PCB and lead removals as well as a date on the additional arsenic investigation. A reference will be made regarding the arsenic removal, but no specific date will be mentioned.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Date:	07/20/2011
Comments:	DTSC conducted the 2011 Annual Arsenic Inpection with Zeke Lyles, District's Arsenic Coordinator; J. Wesley Hawthorne (Locus Technologies), O&M Professional; and, George. The following were observed during the walkthrough: bare soils w/ mesh visible around some trees in Area E; some of the planters in Area F2 needs additional granite; Area C behind building C and by the library needs additional wood chips to fill bald spots around plants; a new building D is almost complete - need to verify if Area C is beneath the new building; some of the Area C around the gym that is not concreted needs woodchips to fill bald spots. Z. Lyles mentioned that after the ongoing modernization he is planning on putting concrete over the grassy area around the gym instead on maintaning the grass. The trees will stay and the root area will have bark as covering. Currently, area soil is exposed. During the site inspection Z. Lyles mentioned that the parking area in the south side of the site will be re-finished in the coming months. DTSC reminded them that Area G2 is part of the parking area and therefore there's a potential for arsenic in the soil. In addition, Z. Lyles also mentioned that the track area will also be modernized in the coming months. DTSC recommended that samples be taken & that the consultants follow the SOP included in the O&M plan.

Completed Date:	07/20/2011
Comments:	DTSC conducted the 2011 Annual Arsenic Inpection with Zeke Lyles, District's Arsenic Coordinator; J. Wesley Hawthorne (Locus Technologies), O&M Professional; and, George. The following were observed during the walkthrough: bare soils w/ mesh visible around some trees in Area E; some of the planters in Area F2 needs additional granite; Area C behind building C and by the library needs additional wood chips to fill bald spots around plants; a new building D is almost complete - need to verify if Area C is beneath the new building; some of the Area C around the gym that is not concreted needs woodchips to fill bald spots. Z. Lyles mentioned that after the ongoing modernization he is planning on putting concrete over the grassy area around the gym instead on maintaning the grass. The trees will stay and the root area will have bark as covering. Currently, area soil is exposed. During the site inspection Z. Lyles mentioned that the parking area in the south side of the site will be re-finished in the coming months. DTSC reminded them that Area G2 is part of the parking area and therefore there's a potential for arsenic in the soil. In addition, Z. Lyles also mentioned that the track area will also be modernized in the coming months. DTSC recommended that samples be taken & that the consultants follow the SOP included in the O&M plan.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/19/2023

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/19/2023

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/23/2023

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/24/2023

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 07/24/2023

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data
The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

410 AIRPORT BOULEVARD
410 AIRPORT BOULEVARD
BURLINGAME, CA 94010

TARGET PROPERTY COORDINATES

Latitude (North):	37.591579 - 37° 35' 29.68''
Longitude (West):	122.340454 - 122° 20' 25.63''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	558227.8
UTM Y (Meters):	4160501.2
Elevation:	9 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50005407 SAN MATEO, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

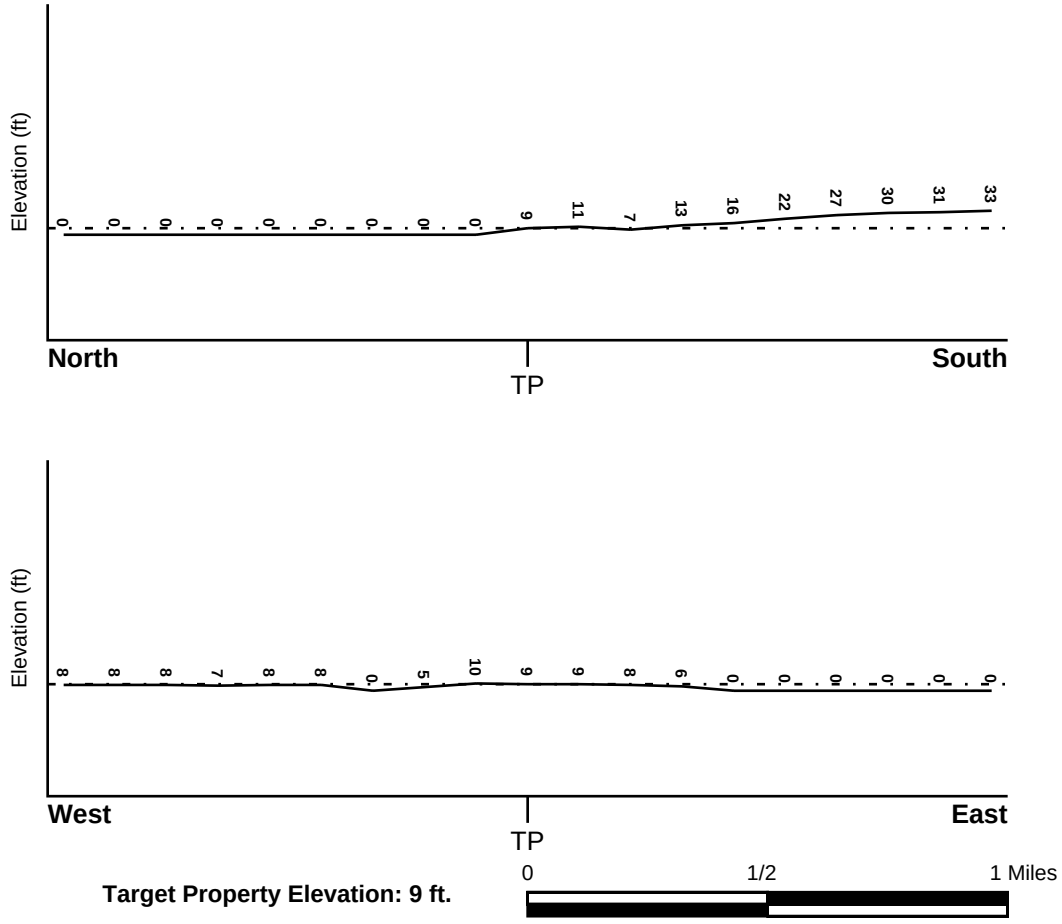
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 9 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type

06081C0153E	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN MATEO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches		Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by ICF Jones and Stokes were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

SUBJECT: Soil Management Plan
Burlingame Shoreline Park
410 Airport Boulevard
Burlingame, California
Langan Project No. 770634903

Dear Mr. Johnson:

Langan Engineering and Environmental Services, Inc. (Langan) is pleased to submit this report titled "Soil Management Plan" (SMP) for on behalf The SPHERE Institute of Burlingame, California (Client), for the proposed Burlingame Shoreline Park development located at 410 Airport Boulevard in Burlingame, California. This SMP presents soil management practices and procedures to be employed during construction activities associated with the proposed development project. Practices and procedures proposed are based on the results of environmental investigation activities conducted at the site.

We appreciate the opportunity to assist you with this project. If you have any questions or need any information clarified, please call Mr. Peter J. Cusack at (408) 283-3615.

Sincerely yours,
Langan Engineering and Environmental Services, Inc.

SOIL MANAGEMENT PLAN
Burlingame Shoreline Park
410 Airport Boulevard
Burlingame, California

Langan Engineering and Environmental Services, Inc. (Langan) has prepared this soil management plan (SMP) for the proposed Burlingame Shoreline Park development project at 410 Airport Boulevard (site) in Burlingame, California (Figure 1). The site is bound by Airport Boulevard and Bay View Place to the south, an asphalt parking lot for the Kincaid Restaurant to the west, the San Francisco Bay Trail and Bay to the north, and Sanchez Channel to the east (Figure 2). The project area is approximately nine acres. Currently, the majority of the site is covered with weeds, brush and trees. The western and eastern edges of the site are gravel and asphalt paved, respectively. A seawall borders the north and east property lines. In addition, a chain link fence surrounds the majority of the project site with one access gate along Airport Boulevard.

The site is within a broad area of tidal slough and marshland reclaimed along the peninsula section of San Francisco Bay. Historically, reclamation in these low-lying areas involved constructing dykes and draining enclosed tracts, then capping the surface with a layer of imported fill. Based on a review of historical aerial photographs and topographic maps, the existing fill was most likely placed in the 1970s.

1.0 PROJECT DESCRIPTION

Based on schematic design drawings by H.T. Harvey & Associates, the project landscape architect (H.T. Harvey, 2020), we understand plans for the project consist of constructing a new park that includes the following:

- an at-grade education center with a potential green roof;
- an elevated boardwalk;
- an approximately 3-acre tidal salt marsh that will be created by breaching the existing seawall and excavating the northern portion of the project site. The 3-acre marsh includes tidal marsh (approximately 1.5-acre) and marsh-upland ecotone (approximately 1.5-acre);
- a paved kite surfing water access;
- a kayak launch in Sanchez Channel;
- paved parking area;

- landscape mounds; and
- pedestrian pathway that will be an extension of the Bay Trail.

In addition, site improvements such as asphalt, concrete, paver, or chip seal pedestrian pathways, park benches, picnic tables, light poles, signage, trash receptacles, and bike racks are also planned.

The elevation contours on the schematic design plan show the marsh will be graded to approximately Elevation seven to 11 feet, with the new marsh area at a finished grade of approximate Elevation three feet. A landscape berm at the center of the site will have a maximum finished grade of approximate Elevation 20 feet, requiring the placement of up to about 12 feet of new fill.

2.0 PREVIOUS GEOTECHNICAL REPORTS

Langan previously prepared a preliminary geotechnical study[1] at the project site for a proposed development that was not constructed. In addition, we prepared a geotechnical investigation report[2] for the new pedestrian bridge over Sanchez Channel. Based on our review of the 2017 and 2019 available data from our subsurface investigations, the site was underlain by approximately nine to 20 feet of fill. The fill generally consisted of stiff silts and medium dense sands and gravels, with trace brick fragments. The fill overlies a layer of weak, compressible marine clay known locally as Bay Mud. The thickness of Bay Mud underlying the project site ranged from approximately two to 11 feet. The Bay Mud is underlain by interbedded layers of medium stiff to hard clays and interbedded layers of medium dense to dense sand and gravel. Groundwater had been encountered from approximately four to 13 feet below the existing ground surface (bgs). We expect groundwater levels at the site to fluctuate considerably based on tidal conditions. Based on topographic survey of the project site (BKF, 2021), the project site's existing ground surface elevations range from approximately Elevations 10 to 14 feet[3].

[1] "Preliminary Geotechnical Investigation, Burlingame Bay Park Hotel, Burlingame, California, Langan Project No. 770634901," dated 6 February 2017.

[2] "Revised Geotechnical Investigation, Burlingame Point, Pedestrian Bridge, Burlingame, California, Langan Project No. 730227807,"dated 2 April 2019.

[3] All elevations reference North American Vertical Datum of 1988 (NAVD88).

3.0 ENVIRONMENTAL SUBSURFACE INVESTIGATIONS (OCTOBER 2020 AND AUGUST 2022)

To assist in the characterization of the site's subsurface conditions for the proposed Burlingame Shoreline Park development project, in October 2020 Langan advanced a total of seven exploratory borings to a depth of approximately 15 feet bgs throughout the site for the collection and analyses of soil samples. In addition, H.T Harvey & Associates excavated 15 exploratory test pits to depths of five to nine feet bgs throughout the site for visual soil classification and collection and analyses of soil samples.

On 9 October and 12 October 2020, a total of seven environmental borings (S-1 through S-7) were advanced at the site for the collection of soil samples for analytical testing. The borings were advanced to a depth of approximately 15 feet bgs. The exploratory boring locations are shown on Figure 2. Based on the depth of the proposed excavation and in an effort to adequately characterize the soil that may be off-hauled during development activities, soil samples were collected at the following approximate depths (where applicable) of 1.5, 3.0, 5.0, 10, and 15 feet bgs.

On 20 October 2020, an additional 15 shallow test pits (S-8 through S-22) were advanced by H.T. Harvey & Associates throughout the site as shown on Figure 2. Langan observed the sampling for visual and olfactory indications of possible contamination. Based on these observations, Langan collected additional soil samples from test pits S-8 (Sample ID: TP-S8), S-10 (Sample ID: TP-S10), S-11 (Sample ID: TP-S11), S-17 (Sample ID: TP-S17), and S-22 (Sample ID: TP-S22). H.T. Harvey also conducted their own sampling at each location and the results of H.T. Harvey & Associates investigation are presented under a separate cover.

Based on the analytical results of the October 2020 sampling, additional soil sampling was performed on 18 and 19 August 2022 to further delineate hazardous and non-hazardous soil at the site. To achieve this, a total of 44 additional shallow borings were drilled using a direct push drill rig to characterize the extent of Class I Non-RCRA hazardous waste and Class II non-hazardous waste at the site that will be disturbed during the restoration project. Soil samples were collected from the north, east, south and west of each of the borings at the following approximate depths (where applicable) of 1.5, 2.0, 3.0, 10, and 10.5 feet bgs as shown on Figure 2. In addition to characterizing the extent of the Class I and Class II material on the site, Langan collected samples from three additional boring locations (H1 through H3) to a max depth of nine feet bgs. Two composite samples were collected from each boring location; one representative from depths of three to six feet bgs (representing the future Marsh plain and

subgrade) and one representative from depths of six to nine feet bgs (representing the future marsh channel and subgrade).

All environmental drilling was conducted by Gregg Drilling & Testing of Martinez, California using direct push drilling. Soil sample ends were covered with Teflon, sealed with plastic end caps, labeled and stored on ice until delivery to the analytical laboratory. Boring logs from the 2020 subsurface investigation are presented in Appendix A as Figures A-1 through A-7. The material encountered was classified according to the soil classification system described on Figure A-8. Boring logs from the 2022 subsurface investigation are presented in Appendix B as Figures B-1 through B-44. The material encountered was classified according to the soil classification system described on Figure B-45.

All soil samples were delivered under chain-of-custody control to McCampbell Analytical Laboratory, Inc. (McCampbell), a California Department of Public Health certified analytical laboratory in Pittsburg, California.

4.0 SAMPLE SELECTION AND ANALYTICAL TESTING

4.1 Soil Analyses

Soil Analyses

The soil samples from the October 2020 and August 2022 were submitted to McCampbell for some or all of the following analyses:

- total petroleum hydrocarbons as gasoline (TPHg), TPH as diesel (TPHd), and TPH as motor oil (TPHmo) by EPA Method 8015;
- volatile organic compounds (VOCs) by EPA Method 8260;
- semi-volatile organic compounds (SVOCs) by EPA Method 8270;
- polychlorinated biphenyls (PCBs) by EPA Method 8082;
- organochlorine pesticides (OCPs) by EPA Method 8081;
- California assessment manual (CAM) 17 metals by EPA Method 6010B; and
- Asbestos by California Air Resource Board (CARB) 435.

Analytical results for metal concentrations in soil were compared to the total threshold limit concentration (TTLC). Samples with concentrations of any metal in milligrams per kilogram

(mg/kg) greater than ten times the soluble threshold limit concentration (STLC) value (in milligrams per liter [mg/L]) were also analyzed for soluble metals using the California waste extraction test (WET) method and for analysis by the Federal toxicity characteristic leaching potential (TCLP). These analyses were performed to assess if metal concentrations in soil were at State and/or Federal hazardous waste levels.

Chemical compounds in soil with concentrations greater than ten times the soluble threshold limit concentration (STLC) were also analyzed for solubility using the California waste extraction test (WET) method. Any total threshold limit concentration (TTLC) exceeding 20 times the toxicity characteristic leaching procedure (TCLP) value, or if the STLC value after analysis with the WET method exceeded the State of California hazardous waste criteria the compound was also analyzed by the Federal TCLP analysis. These analyses were necessary to assess if concentrations exceed State (STLC) and/or Federal (TCLP) hazardous waste criteria for landfill disposal restrictions.

5.0 LABORATORY TEST RESULTS AND EVALUATION

The laboratory analytical results are discussed below and summarized on Tables 1 2, and 3. Copies of the certified laboratory analytical reports for the environmental data collected by Langan are presented in Appendix C. Analytical results were compared to the San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs)[4], and State and Federal hazardous waste criteria for landfill disposal considerations. Where applicable, Langan compared analytical results to both the Cancer Risk and Non-Cancer Hazard ESLs to evaluate concentrations in soil.

5.1 Soil Analytical Results

Soil analytical results for petroleum hydrocarbons, VOCs, and SVOCs parameters are summarized on Table 1 and OCPs, PCBs, and asbestos parameters are summarized in Table 2.

TPHg was detected in seven of the 37 soil samples analyzed at concentrations ranging from 1.0 milligram per kilogram (mg/kg) to 4.0 mg/kg. None of the samples exceeded the commercial ESL of 2,000 mg/kg. TPHd was detected in 32 of the 37 soil samples analyzed at concentrations

[4] RWQCB ESLs: Soil Direct Exposure Human Health Risk Levels, Shallow Soil Exposure (Table S-1); Groundwater Maximum Contaminant Levels (MCLs), Direct Exposure Human Health Risk Levels (Table GW-1).

ranging from 1.5 mg/kg to 2,600 mg/kg. One sample collected from TP-S22 at a depth of approximately 2.7 feet bgs exceeded the commercial ESL of 1,200 mg/kg.

TPHmo was detected in 36 of the 37 soil samples analyzed at concentrations ranging from 7.4 mg/kg to 3,300 mg/kg. None of the samples exceeded the commercial ESL of 180,000 mg/kg.

A total of four VOCs (carbon disulfide, cis-1,2-dichloroethene, 4-isopropyl toluene, and trichloroethene) were detected at low levels above the laboratory reporting limits in at least one of the 27 soil samples analyzed. No detections of VOCs exceeded their respective ESLs.

A total of 18 SVOCs (acenaphthylene, anthracene, benzo (a) anthracene, benzo (a) pyrene, benzo (b) fluoranthene, benzo (g,h,i) perylene, benzo (k) fluoranthene, bis (2-ethylhexyl) phthalate, dibenzo (a,h) anthracene, chrysene, fluoranthene, fluorene, indeno (1,2,3-cd) pyrene, 1-methylnaphthalene, 2-methylnaphthalene, naphthalene, phenanthrene, and pyrene), were detected above the laboratory reporting limits in at least one of the 27 soil samples analyzed. No detections of SVOCs exceeded their respective ESLs.

A total of 14 OCPs (chlordane, a-chlordane, g-chlordane, p,p-DDD, p,p-DDE, p,p-DDT, dieldrin, endosulfan I, endosulfan II, endosulfan sulfate, endrin aldehyde, heptachlor, heptachlor expoxide, and methoxychlor) were detected at low levels above the laboratory reporting limits in at least one of the 13 soil samples analyzed. No detections of OCPs exceeded their respective ESLs.

No PCBs were detected above laboratory reporting limits in any of the seven soil samples analyzed.

Asbestos was detected in one of the nine soil samples analyzed above the laboratory reporting limit at a concentration of 0.5%. The soil sample was collected from boring S-5 at a depth of 9.5 feet to 10 feet bgs exceeded the California Air Resources Board screening level for asbestos at 0.25%.

Soil analytical results for metal parameters are summarized in Table 3 and were compared to RWQCB commercial ESLs, California TTLC, the State of California hazardous waste criterion (STLC), and the Federal hazardous waste criterion (TCLP).

Arsenic was detected in all 32 soil samples analyzed at concentrations ranging from 2.2 mg/kg to 17 mg/kg which exceeded the commercial ESL of 0.31 mg/kg. One sample collected from

S3 from a depth of 1.0 foot to 1.5 feet bgs exceeded the typical background concentration of arsenic in the Bay Area of 11 mg/kg.

Barium was detected in all 27 soil samples analyzed at concentrations ranging from 54 mg/kg to 560 mg/kg, none of which exceeded the commercial ESL or hazardous waste criteria for barium.

Cadmium was detected in seven of the 27 soil samples analyzed at concentrations ranging from 0.52 mg/kg to 11 mg/kg, none of which exceeded the commercial ESL for cadmium. Cadmium was detected at concentrations above 10 mg/kg but below 100 mg/kg in one of the soil samples. The sample was subsequently analyzed for STLC cadmium. STLC cadmium was not detected above the reporting limit of 0.05 mg/L, which was below the State of California hazardous waste criteria of 1.0 mg/L.

Total chromium was detected in all 27 soil samples analyzed at concentrations ranging from 3.6 mg/kg to 580 mg/kg, none of which exceeded the commercial ESL for chromium. Total chromium was detected at concentrations above 50 mg/kg but below 2,500 mg/kg in 20 soil samples, five of which had a concentration above 100 mg/kg. Six samples with high chromium concentrations were subsequently analyzed for STLC chromium. STLC was detected in five of the samples at concentrations ranging from 0.19 mg/L to 6.3 mg/L, with one sample exceeding the State of California hazardous waste criteria of 5.0 mg/L. Two samples were subsequently analyzed for TCLP chromium, with no detection above the reporting limits of 0.10 mg/L.

Cobalt was detected in all 27 soil samples analyzed at concentrations ranging from 7.3 mg/kg to 51 mg/kg, none of which exceeded the commercial ESL or hazardous waste criteria for cobalt.

Copper was in all 27 soil samples analyzed at concentrations ranging from 9.6 mg/kg to 150 mg/kg, none of which exceeded the commercial ESL or hazardous waste criteria for copper.

Lead was detected in all 42 samples analyzed at concentrations ranging from 8.8 mg/kg to 440 mg/kg. Lead was detected in sample S-5-9.5-10 at a concentration of 440 mg/kg, exceeding the commercial ESL of 320 mg/kg. Lead was detected at concentrations above 50 mg/kg but below 1,000 mg/kg in thirteen soil samples, seven of which at concentrations above 100 mg/kg. Eleven of these samples were subsequently analyzed for STLC lead. STLC lead was detected above the reporting limit in all samples analyzed at concentrations ranging from 1.0 mg/L to 8.4 mg/L, four of which (S-2-2-1.5, S-4-2.5-3, S-5-9.5-10, and S-4S-30) exceeded the State of California hazardous waste criteria of 5.0 mg/L. Seven soil samples that had total lead

concentrations above 100 mg/kg were subsequently analyzed for TCLP lead. TCLP lead was detected in three soil samples at concentrations ranging from 0.20 mg/L to 0.96 mg/L. These TCLP detections did not exceed the RCRA hazardous waste criteria of 5.0 mg/L.

Nickel was detected in all 27 samples analyzed at concentrations ranging from 46 mg/kg to 920 mg/kg, none of which exceeded the commercial ESL for nickel. Nickel was detected at concentrations above 200 mg/kg but below 2,000 mg/kg in four soil samples. The two samples with the highest concentrations of nickel were subsequently analyzed for STLC nickel. STLC nickel was detected at concentration of 3.1 mg/L and 5.1 mg/L, which are below the State of California hazardous waste criteria of 20.0 mg/L.

All other soil samples analyzed for metals were either below laboratory reporting limits, below respective screening levels or within normal[5] background ranges found in the western United States, specifically the San Francisco Bay Area.

6.0 SUBSURFACE CONDITIONS

Available geologic and geotechnical information indicates the site is underlain by alluvial deposits consisting of interbedded layers of clay, silt, sand and gravel. Subsurface data from Langan's subsurface investigations indicate that the upper four to 16 feet of soil consists of silty sandy, clayey sand, to sandy clay fill material. Fragments of brick, wood, and other debris were observed within the layer of fill. The fill appeared to be heterogeneous and did not appear to have been engineered in place. The fill material was underlain by Bay Mud to the bottom of the borings. The Bay Mud observed was approximately 1½ to 11 feet thick. This was underlain by medium stiff to hard clay and sandy clay and interbedded layers of medium dense to very dense sand and gravel with varying amounts of silt and clay to the maximum depths explored. Historically, groundwater was encountered at depths between four and 13 feet bgs.

7.0 DISCUSSION

Based on the soil samples collected, the fill material on site appears to be impacted with petroleum hydrocarbons, heavy metals, and asbestos. Elevated concentrations of soluble lead were detected at borings S-1 at a depth of 1.0 feet to 1.5 feet bgs, S-4 at a depth of 2.5 feet to 3.0 feet bgs; S-4S at a depth of 3.0 feet bgs, and S5 at a depth of 9.5 feet to 10 feet bgs exceeded the State of California non-RCRA hazardous waste criteria. An elevated concentration of soluble

[5] Environmental Resources Management. *Feasibility Study, Hookston Station, Pleasant Hill, California*. Appendix A, Table A-2, "Comparison of Background Concentrations of Metals in Bay Area Soils," July 2006.

chromium was detected boring H-1 at a depth of 6.0 feet to 9.0 feet bgs exceeded the State of California non-RCRA hazardous waste criteria. The approximate locations and depths of State of California non-RCRA hazardous material in soil is shown on Figure 3.

Based on the elevated concentrations of petroleum hydrocarbons detected in test pit S-22 at a depth of approximately 2.7 feet bgs, this material will likely be disposed as Class II non-hazardous material. In addition, an elevated concentration of arsenic was detected in boring S-3 at a depth of 1.0 to 1.5 feet bgs will most likely need to be disposed of as Class II non-hazardous material. The approximate location and depth of the Class II non-hazardous material in soil is shown on Figure 4.

In addition, asbestos was detected at a concentration of 0.5% in the sample collected at S-5 at a depth of 9.5 to 10 feet bgs.

All remaining material will likely be excavated and disposed of as unrestricted waste depending on the disposal facility's acceptance criteria or reused on site. The reuse of soil on site placed below 11.5 feet NAVD88 for the tidal marsh or ecotone habitat establishment must also comply with the wetland surface screening criteria referenced by the ecological consultants (H.T. Harvey & Associates).

Groundwater was not analyzed as a part of this investigation. Based on the historically shallow groundwater at the site, dewatering activities may be needed during excavation activities. If required, discharge of groundwater must comply with the appropriate regulatory agency dependent on the method of discharge.

8.0 RECOMMENDATIONS FOR ENVIRONMENTAL MANAGEMENT

The most recent analytical results indicate that some of the material present at the site contains elevated concentrations of petroleum hydrocarbons and heavy metals in the soil at the site. The presence of these compounds poses soil management and potential health and safety (H&S) issues to be addressed as part of the site development activities. The soil management objectives for the site are to minimize exposure of potentially hazardous constituents in soil to construction workers, nearby residents and/or pedestrians, and future users of the site. The routes of potential exposure could be through three pathways: 1) dermal (skin) contact with the soil; 2) inhalation of dusts; and 3) ingestion of the soil. The general contractor (GC) would be responsible for establishing and maintaining proper health and safety procedures to minimize worker and public exposure to site contaminants during construction.

The procedures in this SMP are intended to facilitate compliance with applicable federal, state, and local laws and regulations, applicable to earthwork activities at the site as a result of the reported hazardous lead and petroleum hydrocarbon concentrations in the soil.

8.1 Health and Safety Measures

The contractor will be responsible for establishing and maintaining proper H&S procedures to minimize worker and public exposure to Site contaminants during construction.

8.1.1 Health and Safety Plan

The potential health risk to on-Site construction workers and the public will be minimized by developing and implementing a comprehensive HASP, which has been prepared by a certified industrial hygienist (CIH) representing the contractor.

The purpose of the HASP is to provide field personnel with an understanding of the potential chemical and physical hazards, protection of any off-site receptors, procedures for entering the project Site, H&S procedures, and emergency response to hazards should they occur. All project personnel shall read and adhere to the procedures established in this HASP. A copy of this plan will be kept on Site during field activities and will be reviewed and updated as necessary.

The HASP will describe the H&S training requirements i.e., trained in accordance with Section 1910.120 of 29 Code of Federal Regulations (HazWoper training), specific personal hygiene, and monitoring equipment that will be used during construction to protect and verify the H&S of the construction workers and the general public from exposure to constituents in the soil.

8.1.2 Health and Safety Officer

A site health and safety officer (HASO) identified in the HASP will be on site at all times during excavation activities to ensure that all H&S measures are maintained. The HASO will have authority to direct and stop (if necessary) all construction activities in order to ensure compliance with the HASP.

The general public will be protected through the following measures:

- the site will be fenced;
- exposed soil at the construction Site will be watered at least twice a day to prevent visible dust from migrating off-site;

- stockpiles will be covered;
- water will be misted or sprayed during the loading of material onto trucks for off haul;
- trucks transporting contaminated material will be covered with a tarpaulin or other cover;
- the wheels of the trucks exiting the site will be cleaned prior to entering public streets;
- public streets will be swept daily if material is visible, excavation and loading activities will be suspended if winds exceed 15 miles per hour; and
- the fence will be posted with requirements of the safe drinking water and toxic enforcement act (Proposition 65).

8.2 Soil Management

The proposed construction activities will disturb soil during the mass excavation, site grading, construction of new foundations, utility vaults, and utility lines. During all excavation activities, dust control measures will be implemented to reduce potential exposure. These measures may include moisture-conditioning the soil and covering the exposed soil and stockpiles with weighed down plastic sheeting to prevent exposure of the soil.

The site's HASP will contain additional dust monitoring, action levels, and work stoppage provisions that will be followed during construction activities in addition to those described in this SMP.

The soil management objectives for the site are to minimize exposure of potentially hazardous constituents in soil to construction workers, nearby residents and/or pedestrians, and future users of the site. The routes of potential exposure could be through three pathways: 1) dermal (skin) contact with the soil, 2) inhalation of dusts, and 3) ingestion of the soil. The GC would be responsible for establishing and maintaining proper health and safety procedures to minimize worker and public exposure to Site contaminants during construction.

8.2.1 Material Segregation and Disposal

The results of Langan's subsurface investigations indicate that some material underlying the site contains hazardous concentrations of soluble lead and chromium, which will need to be disposed off-site at a State of California Class I regulated landfill. The area of material containing soluble lead concentrations exceeding the State of California Class I hazardous waste criteria is shown

on Figure 3. We estimate approximately 756 cubic yards of Class I State of California hazardous material will be transported and disposed off-site.

Additionally, some material underlying the site contains non-hazardous concentrations of petroleum hydrocarbons and arsenic which will need to be disposed off-site at a Class II regulated landfill. The area of material containing petroleum hydrocarbon and arsenic concentrations exceeding the Class II non-hazardous waste criteria is shown on Figure 4. We estimate approximately 119 cubic yards of Class II non-hazardous material will be transported and disposed off-site.

Based on the excavation and grading depths anticipated for the Site development, it is anticipated that soil excavated during the construction activities will be directly loaded into trucks for off-site disposal; if necessary, other means for disposal of soils include use of bins for containing soil prior to transport and off-site disposal.

8.2.2 Soil Stockpiling Procedures

If soil stockpiling of suspected contaminated soil is to be performed, the excavation contractor shall establish appropriate soil stockpile locations on the site to properly segregate, cover, control dust, profile, and manage the excavated soil. At a minimum, stockpiled soils will be placed on top of one layer of 20-mil polyethylene sheeting (or equivalent), such as VisQueen®. When stockpiled soil is not actively being handled, top sheeting will be adequately secured so that all surface areas are covered. All stockpiling activities must be in compliance with this SMP.

8.2.3 Soil Tracking and Disposition

The contractor will establish appropriate off-Site disposal locations and direct truck loading scheduling and/or stockpile locations on the Site to properly segregate, cover, moisture control, and profile the excavated material. Profiling criteria will ultimately depend on the acceptance criteria of the facilities receiving the material. These procedures will be established by the excavation contractor and coordinated with the proposed facilities prior to initiating excavation.

The contractor, on behalf of the owner, will be responsible for tracking final material dispositions. Any excavated material considered State of California or Federal RCRA hazardous waste) will be tracked using the Uniform Hazardous Waste Manifest System (USEPA Form 8700-22), as applicable. Material not considered hazardous waste will be tracked using non-hazardous bills of lading. These two systems will be used to comply with appropriate state and local requirements. All manifests and bills of lading will be provided to Langan during the excavation activities.

The contractor will arrange for transportation of all wastes off-site. The excavated material waste will be transported to the appropriate disposal facility using a permitted, licensed, and insured transportation company. Transporters of hazardous waste must meet the requirements of 40 CFR 263 and 22 CCR 66263. All trucks transporting bulk hazardous waste will be properly lined and covered with compatible materials.

If any material that is to be exported off-site that is characterized as a hazardous waste, an appropriate USEPA Generator Identification Number will be recorded on the hazardous waste manifests used to document transport of hazardous waste off-site. The hazardous waste transporter, disposal facility, and U.S. Department of Transportation (DOT) waste description required for each manifest will be determined on a case-by-case basis. A description of the number of containers being shipped, the type of container, and the total quantity of waste being shipped will also be included on each manifest.

The contractor will be responsible for accurate completion of the hazardous waste manifests and non-hazardous bills of lading. Records of all wastes shipped off-site will be maintained by the contractor and will be made available for inspection on request. The final destination of wastes transported off-site will be documented in the Soil Management Completion Report (Section 6.0).

The following records will be kept by the owner for the indicated length of time:

1. Copies of uniform hazardous waste manifests signed by the designated waste disposal facility will be retained for at least five years from the date the waste was accepted by the initial transporter.

2. All records pertaining to the characterization of hazardous or nonhazardous waste will be retained for a minimum of three years.

8.2.4 On-Site Movement of Soils

Soil within the boundaries of the site may be moved within or between various portions of the site outside of the tidal marsh and ecotone (above 11.5 feet NAVD88), managed and re-used without need for sampling, provided the soils are not adjacent to documented or newly discovered impacted soil or unanticipated subsurface conditions. Prior to moving and reusing soil on the site, Langan must be notified and approve of the proposed use. Langan approved representatives must also visually inspect the soil proposed for reuse prior to reusing the soil. Prior to moving any soil into the tidal marsh or ecotone below 11.5 feet NAVD88, the qualified

owner's representative (e.g., H.T. Harvey & Associates) must review and approve import soil to ensure it meets the RWQCB/BCDC's contaminant criteria to protect aquatic life.

To reuse material exceeding 2019 Residential ESLs (Class II non-hazardous material) on site, Langan must be notified and approve of the reuse. The Class II non-hazardous material can potentially be placed in an excavation pit that is wrapped with a geotextile fabric or other visible marker (orange construction fencing or marker fabric) that physically separates the Class II non-hazardous material from the clean soil on site. The impacted material would either need to be capped with two feet of clean fill material or hardscape.

If the final depth of the excavation does not extend beyond the State of California Class I non-RCRA hazardous material and it is left in place, a geotextile fabric or other visible marker (orange construction fencing or marker fabric) that physically separates the impacted material must be used. The impacted material must then be capped with a minimum of two feet of clean fill material or hardscape. Once excavated, the Class I non-RCRA hazardous material can only be reused below the hardscape of the proposed building or under asphalt and/or concrete hardscape. Reuse of Class I non-RCRA material will require regulatory approval. A representative of Langan will be on-site during excavation, and placement activities to ensure the proper handling of the hazardous material.

A Cap Maintenance Plan (CPM) will need to be prepared if any State of California Class I non-RCRA hazardous material or Class II non-hazardous material is left on site. The CMP will provide the basis of a recorded Deed Notification, if needed, of the actual soil conditions remaining at the site.

8.2.5 Soil Import Criteria (If Needed)

Unless from a documented clean source such as a quarry, soil imported onto the site for use in uplands above 11.5 feet NAVD88 will be tested in accordance with the "Clean Imported Fill Material" information advisory developed by the California DTSC in October 2001. Soil imported for use in the ecotone or tidal marsh below 11.5 feet NAVD88 will need to follow guidance in the most up-to date version of the Master Quality Assurance Project Plan for the San Francisco Bay Don Edwards National Wildlife Refuge approved by the RWQCB (i.e., U.S. Fish and Wildlife Service and H.T. Harvey & Associates 2021[6].

[6] U.S. Fish and Wildlife Service and H. T. Harvey & Associates. Master Quality Assurance Project Plan for Don Edwards San Francisco Bay National Wildlife Refuge. Revised October 6, 2021.

In accordance with the DTSC information advisory, import fill will be analyzed for the following:

- TPHd and TPHmo by EPA Method 8015 modified by EPA Method 3630;
- TPHg by EPA Method 8015 modified;
- VOCs by EPA Method 8260;
- SVOCs by EPA Method 8270C;
- CAM 17 Metals by EPA Method 6020;
- OCPs by EPA Method 8081 (for fill source areas formerly used as agricultural land);
- Chlorinated herbicides by EPA Method 8151 (for fill source areas formerly used as agricultural land);
- PCBs by EPA Method 8082; and,
- Asbestos by California Air Resources Board Method 435 (CARB).

For in-place import material, the following sampling frequency is required:

- two acres or less – a minimum of four samples;
- two to four acres – a minimum of one sample per 1/2 acre;
- four to 10 acres - a minimum of eight samples; and,
- greater than 10 acres- a minimum of eight locations with four subsamples per location.

For excavated and stockpiled import material, the following sampling frequency is required:

- up to 1,000 cubic yards (cy) – one sample per 250 cy;
- 1,000 to 5,000 cy – four samples for the first 1,000 cy plus one sample per each additional 500 cy; and,
- greater than 5,000 cy – 12 samples for the first 5,000 cy plus 1 sample per each additional 1,000 cy.

If the chemical properties of an import fill source are known (i.e. quarried material) sampling may not be required. Soil quality parameters for acceptable imported soil are will be based on the 2019 Water Board ESLs from Table S-1, Soil Direct Exposure Human Health Risk Screening Levels for commercial land use. For arsenic, the background level in the Bay Area of 11 mg/kg

will be used in place of the ESL. Import soil with visual or olfactory evidence of petroleum hydrocarbons is prohibited.

8.3 Odor Control

When needed, odor suppression measures will be implemented by the General Contractor to minimize odor during excavation activities. The means to be considered for minimization of odors during excavation activities includes, but are not limited to: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; (c) Limiting soil excavation or loading to times when meteorological conditions are conducive to conducting operations (e.g., the predominant wind direction does not direct vapors or odors toward a sensitive receptor); (d) use of foams to cover exposed odorous soil and rock material; (e) use of chemical odorants in spray or misting systems (i.e. Simple Green, ODEX, or Biosolve); and, (e) use of staff to monitor odors in surrounding area.

8.4 Dust Control

Prior to initiating construction activities, a dust control plan (prepared by contractor and specific to this project) will be implemented to reduce potential exposure during excavation and loading operations, and included as an appendix to the site's HASP. This document will contain measures to protect construction workers and the public including: dust control measures and work stoppage provisions that will be followed during construction activities.

During excavation and subsurface demolition activities, a dust control plan will be implemented through implementation of engineering controls, to minimize generation of dust and the potential off-site migration of chemicals in site soil. Dust control measures at a minimum will include:

- Covering soil stockpiles with plastic sheeting.
- Watering uncovered ground surface at the site, use of water will be limited to prevent runoff.
- Misting or spraying of soil during excavation and loading.
- Emplacement of gravel and/or rubble plates on site access roads as feasible.
- Trucks hauling soil from the site will be covered.
- Visible dust will be monitored during excavation and subsurface demolition.
- The soil drop height from an excavator's bucket onto soil piles or into transport trucks will

be minimized.

- Windbreaks will be deployed as necessary.
- If necessary, the area of excavation may be limited to reduce dust generation.
- Site vehicle speed limits.
- Street sweeping.
- Termination of excavation if winds exceed 25 mph.
- Addition of soil stabilizers and other responses as needed.

Misting or spraying will be performed to sufficiently reduce fugitive dust emissions, but limited to prevent water runoff. Efforts will also be made to minimize the soil drop height from an excavator's bucket onto soil piles or into transport trucks.

8.5 Asbestos ATCM Compliance

The site is subject to Title 17 of the California Code of Regulations (17 CCR) Section 93105 CARB Asbestos ATCM for construction, grading, quarrying, and surface mining operations dated July 2002 due to the presence of NOA in the subsurface. The CARB Asbestos ATCM is enforced locally by the Bay Area Air Quality Management District (BAAQMD) and requires construction projects greater than one acre in size, in which NOA, serpentinite, or ultramafic rock is present, to prepare a site-specific ADMP for agency approval. The ADMP will specify dust mitigation measures that must be initiated at the start and maintained throughout the duration of the construction and grading activity per the Asbestos ATCM. Asbestos dust mitigation will be implemented every day that construction and grading activities are performed at the site. Construction and grading activities include any disturbance of surface or stockpiles conducted with powered equipment or any related activity including, but not limited to, all surface and subsurface cuts and fills, excavation, material loading, trenching, stockpiling, auger drilling, bulldozing, and landfilling.

Asbestos dust suppression measures will be implemented by the general contractor and their subcontractors in accordance with the ADMP. In addition, perimeter airborne asbestos monitoring will be conducted every day in which construction and grading activities occur. Typically this includes one upwind and two downwind asbestos dust monitoring locations. Based on air monitoring results, visual observations of fugitive dust and/or complaints of

excessive dust generation by off-site parties, additional dust suppression measures may need to be implemented. The general contractor and their subcontractors will be responsible for conducting the dust control measures presented in the ADMP and for general compliance with Asbestos ATCM during construction and grading activities.

The Asbestos ATCM states that at a minimum the following dust mitigation measures must be initiated at the start and maintained throughout the duration of the construction or grading activity:

- Construction vehicle speed at the work site must be limited to 15 miles per hour or less;
- Prior to any ground disturbance, sufficient water must be applied to the area to be disturbed to prevent visible emissions from crossing the property line;
- Areas to be graded or excavated must be kept adequately wetted[7] to prevent visible emissions from crossing the property line;
- Storage piles must be kept adequately wetted, treated with a chemical dust suppressant, or covered when material is not being added to or removed from the pile;
- Equipment must be washed down before moving from the property onto a paved public road; and
- Visible track-out on the paved public road must be cleaned using wet sweeping or a HEPA filter equipped vacuum device within twenty-four hours.

Per the Asbestos ATCM, the project shall initiate at the start and maintain throughout the duration of the construction earth-disturbing activity the mitigation measures listed above until the site is fully encapsulated with concrete or serpentinite fragments are no longer exposed at the surface (i.e. covered with hardscape and/or landscape).

8.6 Storm Water Pollution Controls

Storm water pollution controls will be implemented to minimize storm water runoff and sediment transport from the Site. A Storm Water Pollution Prevention Plan (SWPPP) will identify Best Management Practices (BMPs) for activities as specified by the California Storm Water Best Management Practices Handbook (Stormwater Quality Task Force, 1993) and/or the Manual of Standards for Erosion and Sediment Control Measures (ABAG, 1995The SWPPP will include

[7] "Adequately Wetted," as defined by the Asbestos ATCM, means sufficiently moistened with water to minimize the release of particulate matter into the ambient air as determined by the test method(s) in subsection (h)(5).

protocols (i.e., earth dikes and drainage swales) to control storm water contact with, or runoff from potentially impacted soil, during wet weather conditions.

8.7 Groundwater Management

Groundwater at the site has been encountered at depths of four feet to 13 feet bgs. Based on the shallow depth of groundwater and anticipated planned grading, construction dewatering may be required. If dewatering is conducted the groundwater discharge must comply with either NPDES requirements if discharging to the storm drain or the City of Burlingame if discharging to the sanitary sewer.

8.8 Contingency Procedures for Unknown/Unexpected Conditions

The following tasks should be implemented during excavation activities if unknown historical subsurface features and/or unanticipated hazardous materials are encountered. Such materials may include unaccounted for underground storage tanks (USTs) and associated product lines, sumps, and/or vaults, former monitoring wells, and soil with significant petroleum hydrocarbon odors and/or stains:

- Stop work in the area where the suspect material is encountered and cover with plastic sheets.
- Notify the General Contractor's site safety officer and site superintendent. The General Contractor will request that Langan conduct a site inspection and will consult with the Langan regarding appropriate follow-up actions in the suspect area.
- Review the existing health and safety plan for revisions, if necessary, and have appropriately trained personnel on-site to work with the affected materials, once directed by the General Contractor.

If necessary, notifications will be performed, permits will be in place prior to subsurface feature removals, and permit conditions will be followed.

If a UST, product line, sump, or vault is found, SMCDEH and Burlingame Fire Department (BFD) will be notified and a licensed tank removal contractor will properly remove and dispose of the UST. Proper permits and notifications should be in place prior to removal of the UST. If soil staining is observed, the affected soil will be placed in a stockpile on plastic sheets and covered with plastic sheets. Langan will complete soil sampling and analysis tasks for UST closure in accordance with SMCDEH, BFD, or appropriate regulatory agency guidelines. Langan will collect and analyze soil samples to determine disposal of the material, the extent of the unexpected area

of apparent petroleum impacted soil, and that impacted material has been appropriately removed. Soil samples collected from beneath fuel pipelines, if any, will be collected beneath joints and elbows and at a frequency of one sample per 20 linear feet.

If stained soil or odors are noted in association with an unknown subsurface feature, plastic sheeting will be placed over the affected area and Langan will be contacted for inspection and appropriate action. If the stained or odor-containing soil is excavated, the soil will be stockpiled onto plastic sheeting and covered with plastic sheeting. Langan will collect and analyze soil samples to determine disposal of the material, the extent of the unexpected area of apparent petroleum impacted soil, and that impacted material has been appropriately removed. Soil samples collected from beneath fuel pipelines, if any, will be collected beneath joints and elbows and at a frequency of one sample per 20 linear feet.

9.0 SOIL MANAGEMENT COMPLETION REPORT

A Soil Management Completion Report (SMCR) will be prepared that summarizes the soil management activities and any subsequent investigative and removal activities that were completed during redevelopment.

The SMCR will present a chronology of the construction events, a summary of analytical data, a copy of all manifests from the site, and a description of all soil management activities at the site. The report will also contain laboratory analytical results and figures, as appropriate, to provide detail regarding the amount and type of contamination encountered (if any) during various activities. The report will also summarize any residual contaminants that were left on the site after completion of redevelopment activities and document that soil handling procedures were implemented in accordance with this SMP.

10.0 MODIFICATIONS TO THE SMP

There may be a need to modify the SMP as site conditions and/or building plans change. Additionally, as implementation of the SMP proceeds, The SPHERE Institute may request revised provisions of the SMP, including those related to the soil and/or groundwater at specified locations within the site. Such requests for modification will be included in amendments to the SMP.

11.0 LIMITATIONS

This SMP has been prepared on behalf of The SPHERE Institute of Burlingame, California (Client) as Agent for itself and other Lenders, its Successors and/ or Assigns, and is specific to the proposed Burlingame Shoreline Park development located at 410 Airport Boulevard in Burlingame, California. All conclusions and recommendations in this report concerning the Site are the professional opinions of the Langan personnel involved with the project, and this report should not be considered a legal interpretation of existing environmental regulations. Opinions presented herein apply to site conditions existing at the time of our assessment, and cannot necessarily be taken to apply to site changes or conditions of which we are not aware and have not had the opportunity to evaluate. This SMP does not address hazardous materials that may be encountered in aboveground structures, such as asbestos-containing materials or lead-based paint.

Notes:

TPHg - Total Petroleum Hydrocarbons as Gasoline, EPA Method 8015M

TPHd - Total Petroleum Hydrocarbons as Diesel, EPA Method 8015M

TPHmo - Total Petroleum Hydrocarbons as Motor Oil, EPA Method 8015M

VOCs - Volatile Organic Compounds, EPA Method 8260B

SVOCs - Semi-volatile Organic Compounds, EPA Method 8270C

mg/kg - milligrams per kilograms

[1] - San Francisco Bay Regional Water Quality Control Board Environmental (RWQCB) Environmental Screening Levels (ESLs), Direct Exposure Human Health Risk Levels (Table S-1), Residential: Shallow Soil Exposure, dated 2019

[2] - San Francisco Bay Regional Water Quality Control Board Environmental (RWQCB) Environmental Screening Levels (ESLs), Direct Exposure Human Health Risk Levels (Table S-1), Commercial/Industrial: Shallow Soil Exposure, dated 2019

< 1.0 - Analyte was not detected at or above the laboratory reporting limit

ND - Not detected at or above the laboratory reporting limit

P - Agreement between the quantitative dual-column confirmation results exceed method recommended limits of40% RPD. The lowest concentration is reported.

Bold - Sample concentration exceeds commercial ESLs

-- Not analyzed or not established

TCLP (mg/L)			0.03	--	0.03	--	--	--	--	--	--	--	--	--	--	--	10.0	--	--	--

Notes:
PCBs - Polychlorinated Biphenyls, EPA Method 8082
OCPs - Organochlorine Pesticides, EPA Method 8081A
mg/kg - milligrams per kilograms
" -- " = Not analyzed or screening criteria not established
< 0.5 = Analyte was not detected above the laboratory reporting limit (0.5 mg/kg).
Bold - Sample concentration exceeds commercial ESLs
ESLs = Environmental Screening Levels
[1] - San Francisco Bay Regional Water Quality Control Board Environmental (RWQCB) Environmental Screening Levels (ESLs), Direct Exposure Human Health Risk Levels (Table S-1), Residential: Shallow Soil Exposure, dated 2019.
[2] - San Francisco Bay Regional Water Quality Control Board Environmental (RWQCB) Environmental Screening Levels (ESLs), Direct Exposure Human Health Risk Levels (Table S-1), Commercial/Industrial: Shallow Soil Exposure. dated 2019.
[3] - San Francisco Bay Regional Water Quality Control Board (RW.QCB), Soil: Direct Exposure Human Health Risk Levels (Table S-1) Shallow Soil Residential Non-Cancer Risk Environmental Screening Levels, dated January 2019
< 1.0 - Analyte was not detected at or above the laboratory reporting limit
ND - Not detected at or above the laboratory reporting limit
P - Agreement between the quantitative dual-column confirmation results exceed method recommended limits of40% RPD. The lowest concentration is reported.
TTLC = California Total Threshold Limit Concentration
STLC = California Soluble Threshold Limit Concentration
TCLP = Federal Toxicity Characteristic Leaching Procedure

Screening Criteria																										
Commercial / Industrial ESLs - Cancer Risk[1]			–	0.31	–	6,900	4,300	–	–	–	–	1,900	–	–	380	–	–	–	–	64,000	–	–	–	–	–	–
Commercial / Industrial ESLs - Non-Cancer Hazard[2]			160	3.6	220,000	230	1,100	–	1,800,000	–	–	350	47,000	–	320	–	–	190	5,800	11,000	–	5,800	5,800	12	5,800	350,000
Background Metal Concentrations*			1.5-7.1	1.2-31	41-411	0.29-1.1	0.27-3.3	–	10-142	–	–	6.5-25.5	5.4-100	–	4.8-65	–	–	0.07-0.6	0.33-11.4	16-144	–	< 0.25-7	0.2-2.2	< 0.25-42.5	22-90	33-282
Hazardous Waste Criteria																										
TTLC	mg/kg		500	500	10,000	75	100	–	2,500	–	–	8,000	2,500	–	1,000	–	–	20	3500	2,000	–	100	500	700	2,400	5,000
STLC	mg/L		15	5	100	0.75	1	1	5	5	–	80	25	25	5	5	–	0.2	350	20	20	1	5	7	24	250
TCLP	mg/L		–	5	100	–	1	–	5	–	5	–	–	–	5	–	5	0.2	–	–	–	1	5	–	–	–

Notes:
mg/kg = miligrams per kilogram
mg/L = miligrams per liter
" – " = Not analyzed or screening criteria not established
< 0.5 = Analyte was not detected above the laboratory reporting limit (0.5 mg/kg).
ESLs = Environmental Screening Levels
Bold indicates concentration is above Commercial ESLs
Italicized indicates concentration is above typical background metal concentrations
Highlight indicated concentration meets or exceeds STLC/TCLP criteria

APPENDIX A

2020 EXPLORATORY BORING LOGS

PROJECT: **410 AIRPORT BOULEVARD**
Burlingame, California

Log of Boring S-1

Boring location: See Site Plan, Figure 2

Logged by: J. Arakaki
Drilled By: Gregg Drilling

Date started: 10/9/20 | Date finished: 10/9/20

Drilling method: Direct Push

Hammer weight/drop: NA | Hammer type: Automatic

Sampler: 4' Contiuous

DEPTH (feet)	SAMPLES: Sample Number	Sample	Blow Count	Recovery (Inches)	OVM (ppm)	LITHOLOGY	MATERIAL DESCRIPTION
1	S1-1-1.5	●		42"/ 48"	0.0	SM	SILTY SAND (SM) yellow-brown, loose, moist, no odor, some gravel
2							
3	S1-2.5-3	●				CL	SANDY CLAY (CL) dark brown, loose, moist, nonplastic, no odor
4							
5	S1-4.5-5	●				CL	CLAY (CL) olive-brown, subangular to angular, plastic, no odor, some white fragments, some shell fragments observed, some red discoloration
6				45"/ 48"	0.0		
7							
8						CH	CLAY (CH) dark gray, soft, plastic, no odor
9							
10	S1-9.5-10	●		26"/ 48"	0.0

UNIFIED SOIL CLASSIFICATION SYSTEM			
Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	Gravels (More than half of coarse fraction > no. 4 sieve size)	GW	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	SW	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	Silts and Clays LL = < 50	ML	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	MH	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		PT	Peat and other highly organic soils

GRAIN SIZE CHART		
Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel coarse fine	3" to No. 4 3" to 3/4" 3/4" to No. 4	76.2 to 4.76 76.2 to 19.1 19.1 to 4.76
Sand coarse medium fine	No. 4 to No. 200 No. 4 to No. 10 No. 10 to No. 40 No. 40 to No. 200	4.76 to 0.075 4.76 to 2.00 2.00 to 0.420 0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

Unstabilized groundwater level

Stabilized groundwater levelA

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample

Sampling attempted with no recovery

Core sample

Analytical laboratory sample, grab groundwater

Sample taken with Direct Push sampler

Sonic

SAMPLER TYPE

C Core barrel

CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter

D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube

O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube

PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube

S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter

SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter

ST Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure

UNIFIED SOIL CLASSIFICATION SYSTEM

Major Divisions		Symbols	Typical Names
Coarse-Grained Soils (more than half of soil > no. 200 sieve size)	**Gravels** (More than half of coarse fraction > no. 4 sieve size)	**GW**	Well-graded gravels or gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels or gravel-sand mixtures, little or no fines
		GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
	Sands (More than half of coarse fraction < no. 4 sieve size)	**SW**	Well-graded sands or gravelly sands, little or no fines
		SP	Poorly-graded sands or gravelly sands, little or no fines
		SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
Fine -Grained Soils (more than half of soil < no. 200 sieve size)	**Silts and Clays** LL = < 50	**ML**	Inorganic silts and clayey silts of low plasticity, sandy silts, gravelly silts
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, lean clays
		OL	Organic silts and organic silt-clays of low plasticity
	Silts and Clays LL = > 50	**MH**	Inorganic silts of high plasticity
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic silts and clays of high plasticity
Highly Organic Soils		**PT**	Peat and other highly organic soils

GRAIN SIZE CHART

Classification	Range of Grain Sizes	
	U.S. Standard Sieve Size	Grain Size in Millimeters
Boulders	Above 12"	Above 305
Cobbles	12" to 3"	305 to 76.2
Gravel	3" to No. 4	76.2 to 4.76
coarse	3" to 3/4"	76.2 to 19.1
fine	3/4" to No. 4	19.1 to 4.76
Sand	No. 4 to No. 200	4.76 to 0.075
coarse	No. 4 to No. 10	4.76 to 2.00
medium	No. 10 to No. 40	2.00 to 0.420
fine	No. 40 to No. 200	0.420 to 0.075
Silt and Clay	Below No. 200	Below 0.075

Unstabilized groundwater level

Stabilized groundwater level

SAMPLE DESIGNATIONS/SYMBOLS

Sample taken with Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter. Darkened area indicates soil recovered

Classification sample taken with Standard Penetration Test sampler

Undisturbed sample taken with thin-walled tube

Disturbed sample

Sampling attempted with no recovery

Core sample

Analytical laboratory sample

Sample taken with Direct Push or Drive sampler

Sonic

SAMPLER TYPE

C Core barrel

CA California split-barrel sampler with 2.5-inch outside diameter and a 1.93-inch inside diameter

D&M Dames & Moore piston sampler using 2.5-inch outside diameter, thin-walled tube

O Osterberg piston sampler using 3.0-inch outside diameter, thin-walled Shelby tube

PT Pitcher tube sampler using 3.0-inch outside diameter, thin-walled Shelby tube

S&H Sprague & Henwood split-barrel sampler with a 3.0-inch outside diameter and a 2.43-inch inside diameter

SPT Standard Penetration Test (SPT) split-barrel sampler with a 2.0-inch outside diameter and a 1.5-inch inside diameter

ST Shelby Tube (3.0-inch outside diameter, thin-walled tube) advanced with hydraulic pressure

APPENDIX C

CERTIFIED LABORATORY ANALYTICAL RESULTS

McCampbell Analytical, Inc.
"When Quality Counts"

Analytical Report

WorkOrder:	2010B36
Report Created for:	Langan 1 Almaden Blvd, Suite 590 San Jose, CA 95113
Project Contact:	Peter Cusack
Project P.O.:	
Project:	770634903; Berlingame Shoreline Park 410 Airport Blvd
Project Received:	10/21/2020

Analytical Report reviewed & approved for release on 10/28/2020 by:

Susan Thompson
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Berlingame Shoreline Park 410 Airport Blvd
WorkOrder: 2010B36

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Berlingame Shoreline Park 410 Airport Blvd
WorkOrder: 2010B36

Analytical Qualifiers

d7	Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
e2	Diesel range compounds are significant; no recognizable pattern
e7	Oil range compounds are significant
e8	Pattern resembles kerosene/kerosene range/jet fuel range

Chain of Custody (COC) Information

Chain of custody present?	Yes ☑	No ☐	
Chain of custody signed when relinquished and received?	Yes ☑	No ☐	
Chain of custody agrees with sample labels?	Yes ☑	No ☐	
Sample IDs noted by Client on COC?	Yes ☑	No ☐	
Date and Time of collection noted by Client on COC?	Yes ☑	No ☐	
Sampler's name noted on COC?	Yes ☑	No ☐	
COC agrees with Quote?	Yes ☐	No ☐	NA ☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes ☐	No ☐	NA ☑
Shipping container/cooler in good condition?	Yes ☑	No ☐	
Samples in proper containers/bottles?	Yes ☑	No ☐	
Sample containers intact?	Yes ☑	No ☐	
Sufficient sample volume for indicated test?	Yes ☑	No ☐	

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes ☑	No ☐	NA ☐
Samples Received on Ice?	Yes ☑	No ☐	
(Ice Type: WET ICE)			
Sample/Temp Blank temperature	Temp: 0.1°C		NA ☐
Water - VOA vials have zero headspace / no bubbles?	Yes ☐	No ☐	NA ☑
Sample labels checked for correct preservation?	Yes ☑	No ☐	
pH acceptable upon receipt (Metal: <2; Nitrate 353.2/4500NO3: <2; 522: <4; 218.7: >8)?	Yes ☐	No ☐	NA ☑
UCMR Samples:			
pH tested and acceptable upon receipt (200.8: ≤2; 525.3: ≤4; 530: ≤7; 541: <3; 544: <6.5 & 7.5)?	Yes ☐	No ☐	NA ☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L)?	Yes ☐	No ☐	NA ☑

"When Quality Counts"

Analytical Report

WorkOrder: 2010637

Report Created for: Langan

1 Almaden Blvd, Suite 590
San Jose, CA 95113

Project Contact: Peter Cusack
Project P.O.:
Project: 770634903; Burlingame Shoreline Park

Project Received: 10/13/2020

Analytical Report reviewed & approved for release on 11/04/2020 by:

Jennifer Lagerbom
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Burlingame Shoreline Park
WorkOrder: 2010637

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Burlingame Shoreline Park
WorkOrder: 2010637

Analytical Qualifiers

B	Analyte detected in the associated Method Blank and in the sample
H	Samples were analyzed out of hold time
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between quantitative confirmation results exceed method recommended limits
S	Surrogate recovery outside accepted recovery limits.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.
c1	Surrogate recovery outside of the control limits due to the dilution of the sample.
c2	Surrogate recovery outside of the control limits due to matrix interference.
d1	Weakly modified or unmodified gasoline is significant
e2	Diesel range compounds are significant; no recognizable pattern
e6	One to a few isolated peaks present in the TPH(d/mo) chromatogram
e7	Oil range compounds are significant
h7	Copper (EPA 3660B) cleanup
k10	CARB 435 Exception 1 - No asbestos detected. The limit of quantitation (LOQ) = 0.25%.
k15	Chrysotile

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F3	The surrogate standard recovery and/or RPD is outside of acceptance limits.

Sample Receipt Checklist

Client Name:	**Langan**	Date and Time Received:	**10/13/2020 12:52**
Project:	**770634903; Burlingame Shoreline Park**	Date Logged:	**10/27/2020**
		Received by:	Nancy Palacios
WorkOrder №:	**2010637** Matrix: Soil	Logged by:	Nancy Palacios
Carrier:	Laurie Moore (MAI Courier)		

Chain of Custody (COC) Information

Chain of custody present?	Yes	☑	No	☐		
Chain of custody signed when relinquished and received?	Yes	☑	No	☐		
Chain of custody agrees with sample labels?	Yes	☑	No	☐		
Sample IDs noted by Client on COC?	Yes	☑	No	☐		
Date and Time of collection noted by Client on COC?	Yes	☑	No	☐		
Sampler's name noted on COC?	Yes	☑	No	☐		
COC agrees with Quote?	Yes	☐	No	☐	NA	☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes	☐	No	☐	NA	☑
Shipping container/cooler in good condition?	Yes	☑	No	☐		
Samples in proper containers/bottles?	Yes	☑	No	☐		
Sample containers intact?	Yes	☑	No	☐		
Sufficient sample volume for indicated test?	Yes	☑	No	☐		

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes	☑	No	☐	NA	☐
Samples Received on Ice?	Yes	☑	No	☐		
(Ice Type: WET ICE)						
Sample/Temp Blank temperature	Temp: 1.4°C				NA	☐
Water - VOA vials have zero headspace / no bubbles?	Yes	☐	No	☐	NA	☑
Sample labels checked for correct preservation?	Yes	☑	No	☐		
pH acceptable upon receipt (Metal: <2; Nitrate 353.2/4500NO3: <2; 522: <4; 218.7: >8)?	Yes	☐	No	☐	NA	☑
UCMR Samples:						
pH tested and acceptable upon receipt (200.8: ≤2; 525.3: ≤4; 530: ≤7; 541: <3; 544: <6.5 & 7.5)?	Yes	☐	No	☐	NA	☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L)?	Yes	☐	No	☐	NA	☑

Comments: Method SW8021B/8015Bm (G/MBTEX), Method SW8015B (Diesel & Motor Oil), Method SW8260B (VOCs, Scan- SIM), Method SW8081A/8082 (OC Pesticides+PCBs) ESLs & Method SW8270C (Low Level SVOCs) with GPC Cleanup was setup past their 14-day holding time.

"When Quality Counts"

Analytical Report

WorkOrder: 2010636

Report Created for: Langan

1 Almaden Blvd, Suite 590
San Jose, CA 95113

Project Contact: Peter Cusack
Project P.O.:
Project: 770634903; Burlingame Shoreline Park

Project Received: 10/13/2020

Analytical Report reviewed & approved for release on 11/06/2020 by:

Yen Cao
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Burlingame Shoreline Park
WorkOrder: 2010636

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Burlingame Shoreline Park
WorkOrder: 2010636

Analytical Qualifiers

B	Analyte detected in the associated Method Blank and in the sample.
H	Samples were analyzed out of hold time.
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between quantitative confirmation results exceed method recommended limits.
S	Surrogate recovery outside accepted recovery limits.
c1	Surrogate recovery outside of the control limits due to the dilution of the sample.
c2	Surrogate recovery outside of the control limits due to matrix interference.
e2	Diesel range compounds are significant; no recognizable pattern.
e7	Oil range compounds are significant.
k12	Asbestos observed but no points counted.
k15	Chrysotile.

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F3	The surrogate standard recovery and/or RPD is outside of acceptance limits.
F10	MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Burlingame Shoreline Park
WorkOrder: 2010636 A

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

WORK ORDER SUMMARY

Client Name: LANGAN
Client Contact: Peter Cusack
Contact's Email pcusack@Langan.com

Project: 770634903; Burlingame Shoreline Park
Comments: Samples off HOLD 10/26/2020. STLC & TCLP added 12/4/2020 STAT.

Work Order: 2010636
QC Level: LEVEL 2
Date Logged: 10/13/2020
Date Add-On: 12/4/2020

Lab ID	Client ID	Matrix	Test Name	Containers /Composites	Bottle & Preservative	Collection Date & Time	TAT	Sediment Content	Hold	SubOut
2010636-001A	S1-1-1.5	Soil	SW6020 (Lead) (TCLP)	1	Stainless Steel tube 2"x6"	10/9/2020 8:56	5 days*		☐	
			SW6020 (Lead) (STLC)				5 days*		☐	
2010636-005A	S1-14.5-15	Soil	SW6020 (Metals) (STLC) <Cadmium>	1	Stainless Steel tube 2"x6"	10/9/2020 9:04	5 days*		☐	

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Glossary of Terms & Qualifier Definitions

Client: Langan
Project: 770634903; Burlingame Shoreline Park
WorkOrder: 2010637 A

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

			SW6020 (Lead) (STLC)				5 days*		☐	

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Glossary of Terms & Qualifier Definitions

Client: Langan **WorkOrder:** 2208F40

Project: 770634903; Burlingame Shoreline Park

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Langan **WorkOrder:** 2208F40

Project: 770634903; Burlingame Shoreline Park

Analytical Qualifiers

J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between the quantitative dual-column confirmation results exceed method recommended limits of 40% RPD. The lowest concentration is reported.
S	Surrogate recovery outside accepted recovery limits.
a2	Sample diluted due to cluttered chromatogram.
a3	Sample diluted due to high organic content interfering with quantitative/or qualitative analysis.
c1	Surrogate recovery outside of the control limits due to the dilution of the sample.
c2	Surrogate recovery outside of the control limits due to suspected matrix interference.
c12	Surrogate recovery outside of the control limits
d7	Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9	No recognizable pattern
e2	Diesel range compounds are detected; no recognizable pattern
e7	Oil range compounds are detected.
h7	Copper (EPA 3660B) cleanup
k10	CARB 435 Exception 1 - No asbestos detected. The limit of quantitation (LOQ) = 0.25%.

Quality Control Qualifiers

F10	MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Sample Receipt Checklist

Client Name:	Langan	Date and Time Received:	8/22/2022 16:10
Project:	770634903; Burlingame Shoreline Park	Date Logged:	8/22/2022
		Received by:	Yvette Gallegos
WorkOrder №:	2208F40 Matrix: Soil	Logged by:	Yvette Gallegos
Carrier:	Laurie Moore (MAI Courier)		

Chain of Custody (COC) Information

Chain of custody present?	Yes	☑	No	☐		
Chain of custody signed when relinquished and received?	Yes	☑	No	☐		
Chain of custody agrees with sample labels?	Yes	☑	No	☐		
Sample IDs noted by Client on COC?	Yes	☑	No	☐		
Date and Time of collection noted by Client on COC?	Yes	☑	No	☐		
Sampler's name noted on COC?	Yes	☑	No	☐		
COC agrees with Quote?	Yes	☐	No	☐	NA	☑

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Yes	☐	No	☐	NA	☑
Custody seals intact on sample bottles?	Yes	☐	No	☐	NA	☑
Shipping container/cooler in good condition?	Yes	☑	No	☐		
Samples in proper containers/bottles?	Yes	☑	No	☐		
Sample containers intact?	Yes	☑	No	☐		
Sufficient sample volume for indicated test?	Yes	☑	No	☐		

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes	☑	No	☐	NA	☐
Samples Received on Ice?	Yes	☑	No	☐		
(Ice Type: WET ICE)						
Sample/Temp Blank temperature	Temp: 3.1°C				NA	☐
ZHS conditional analyses: VOA meets zero headspace requirement (VOCs, TPHg/BTEX, RSK)?	Yes	☐	No	☐	NA	☑
Sample labels checked for correct preservation?	Yes	☑	No	☐		
pH acceptable upon receipt (Metal: <2; Nitrate 353.2/4500NO3: <2; 522: <4; 218.7: >8)?	Yes	☐	No	☐	NA	☑
UCMR Samples:						
pH tested and acceptable upon receipt (200.7: ≤2; 533: 6 - 8; 537.1: 6 - 8)?	Yes	☐	No	☐	NA	☑
Free Chlorine tested and acceptable upon receipt (<0.1mg/L) [not applicable to 200.7]?	Yes	☐	No	☐	NA	☑

Analytical Report

WorkOrder: 2208F40 A

Report Created for: Langan

1 Almaden Blvd, Suite 590
San Jose, CA 95113

Project Contact: Peter Cusack
Project P.O.:
Project: 770634903; Burlingame Shoreline Park

Project Received: 08/22/2022

Analytical Report reviewed & approved for release on 09/09/2022 by:

Susan Thompson
Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in a case narrative.

Glossary of Terms & Qualifier Definitions

Client: Langan **WorkOrder:** 2208F40 A

Project: 770634903; Burlingame Shoreline Park

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

NOTES: * STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- Organic extracts are held for 40 days before disposal; Inorganic extract are held for 30 days.

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

U = An unpreserved container was received for a method that suggests a preservation in order to extend hold time for analysis.**

Glossary of Terms & Qualifier Definitions

Client: Langan **WorkOrder:** 2208F40 B

Project: 770634903; Burlingame Shoreline Park

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
CPT	Consumer Product Testing not NELAP Accredited
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
LQL	Lowest Quantitation Level
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
NA	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

I&R Project No.: 21-115

INTRODUCTION

The project will redevelop an approximately 10.2 acre parcel (9.4 acres of land) in the Bayfront area of Burlingame for the Bay Rise Park Project. The project would transform the vacant parcel into a public nature and recreation park with an approximately 8,600-square-foot (sf) education /event center building (approximately 14,000 including roof overhang), and a drop-off loop and one-way drive, which would enter the project site from Airport Boulevard and exit onto Bay View Place. The project would provide 28 on-site parking spaces that could be accessed from the one-way drive as well as 30 off-street parking spaces, for a total of 58 parking spaces. In addition, the project would restore the natural tidal-marsh, improve the section of the Bay Trail, facilitate water access and recreation with water access ramps for kayaking and board sailing, and provide new viewing decks and patios, a small take-out café, multi-purpose and lawn areas, secondary trails throughout the site, an interpretive program, and interpretive elements related to sea-level rise resiliency demonstration.

This report evaluates the project's potential to result in significant noise and vibration impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: 1) the Setting Section provides a brief description of the fundamentals of environmental noise and groundborne vibration, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions; 2) the General Plan Consistency Section discusses the noise and land use compatibility of the project utilizing policies in the City's General Plan; and, 3) the Impacts and Mitigation Measures Section describes the significance criteria used to evaluate project impacts, provides a discussion of each project impact, and presents measures, where necessary, to mitigate the impacts of the project on sensitive receptors in the project vicinity.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (*frequency*) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is the intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its

intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA).* This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This *energy-equivalent sound/noise descriptor* is called L_{eq}. The most common averaging period is hourly, but L_{eq} can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level* (*CNEL*) is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 p.m. to 10:00 p.m.) and a 10 dB addition to nocturnal (10:00 p.m. to 7:00 a.m.) noise levels. The *Day/Night Average Sound Level* (*DNL* or L_{dn}) is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

Sleep and Speech Interference

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noise of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA L_{dn}. Typically, the highest steady traffic noise level during the daytime is about equal to the L_{dn} and nighttime levels are 10 dBA lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12-17 dBA with open windows. With closed windows in good condition, the noise attenuation factor is around 20 dBA for an older structure and 25 dBA for a newer dwelling.[1] Sleep and speech interference is therefore possible when exterior noise levels are about 57-62 dBA L_{dn} with open windows and 65-70 dBA L_{dn} if the windows are closed. Levels of

[1] Based on the U.S. Department of Transportation Federal Highway Administration document "Highway Traffic Noise: Analysis and Abatement Guidance" (2010) and data from Illingworth & Rodkin, Inc. noise monitoring projects.

55-60 dBA are common along collector streets and secondary arterials, while 65-70 dBA is a typical value for a primary/major arterial. Levels of 75-80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to be able to have their windows closed, those facing major roadways and freeways typically need special glass windows.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that the causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. When measuring the percentage of the population highly annoyed, the threshold for ground vehicle noise is about 55 dBA L_{dn}. At an L_{dn} of about 60 dBA, approximately 2 percent of the population is highly annoyed. When the L_{dn} increases to 70 dBA, the percentage of the population highly annoyed increases to about 12 percent of the population. There is, therefore, an increase of about 1 percent per dBA between an L_{dn} of 60-70 dBA. Between an L_{dn} of 70-80 dBA, each decibel increase increases by about 2 percent the percentage of the population highly annoyed. People appear to respond more adversely to aircraft noise. When the L_{dn} is 60 dBA, approximately 10 percent of the population is believed to be highly annoyed. Each decibel increase to 70 dBA adds about 2 percentage points to the number of people highly annoyed. Above 70 dBA, each decibel increase results in about a 3 percent increase in the percentage of the population highly annoyed.[2]

TABLE 1 Definition of Acoustical Terms Used in this Report

Term	Definition
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e. g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average A-weighted noise level during the measurement period.
L_{max}, L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01}, L_{10}, L_{50}, L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

TABLE 2 Typical Noise Levels in the Environment

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110 dBA	Rock band
Jet fly-over at 1,000 feet		
	100 dBA	
Gas lawn mower at 3 feet		
	90 dBA	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80 dBA	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower, 100 feet	70 dBA	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60 dBA	
		Large business office
Quiet urban daytime	50 dBA	Dishwasher in next room
Quiet urban nighttime	40 dBA	Theater, large conference room
Quiet suburban nighttime		
	30 dBA	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	20 dBA	
		Broadcast/recording studio
	10 dBA	
	0 dBA

Fundamentals of Groundborne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving and vibratory compaction equipment typically generates the highest construction related groundborne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess groundborne vibration and almost exclusively to assess the potential of vibration to cause damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most at risk to damage. Most buildings are included within the categories ranging from “Historic and some old buildings” to “Modern industrial/commercial buildings.” Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

TABLE 3 Reaction of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels

Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Threshold at which there is a risk of damage to fragile buildings with no risk of damage to most buildings
0.25	Strongly perceptible to severe	Threshold at which there is a risk of damage to historic and some old buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older residential structures
0.5	Severe - Vibrations considered unpleasant	Threshold at which there is a risk of damage to new residential and modern commercial/industrial structures

Regulatory Background – Noise

This section describes the relevant guidelines, policies, and standards established by Federal and State Agencies, San Mateo County, and the City of Burlingame. The State CEQA Guidelines, Appendix G, are used to assess the potential significance of impacts pursuant to local General Plan policies or the applicable standards of other agencies. A summary of the applicable regulatory criteria is provided below.

Federal

Federal Transit Administration. The Federal Transit Administration (FTA) has identified construction noise thresholds in the *Transit Noise and Vibration Impact Assessment Manual,*[3] which limit daytime construction noise to 80 dBA L_{eq} at residential land uses, 85 dBA L_{eq} at commercial and office uses, and to 90 dBA L_{eq} at industrial land uses. Although these guidelines are not directly applicable to the project, they are commonly used in many jurisdictions when quantitative daytime construction noise thresholds are not available.

State of California

State CEQA Guidelines. The California Environmental Quality Act (CEQA) contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

[3] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, FTA Report No. 0123, September 2018.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

b) Generation of excessive groundborne vibration or groundborne noise levels;

c) For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

San Mateo County

Airport Land Use Compatibility Plan (ALUCP) for the Environs of San Francisco International Airport 2012. The airport noise compatibility policies described in this section outline compatibility criteria for the proposed land use.

> **NP-2 Airport Noise/Land Use Compatibility Criteria.** The compatibility of proposed land uses located in the Airport noise compatibility zones shall be determined according to the noise/land use compatibility criteria shown in Table IV-1. The criteria indicate the maximum acceptable airport noise levels, described in terms of Community Noise Equivalent Level (CNEL), for the indicated land uses. The compatibility criteria indicate whether a proposed land use is "compatible," "conditionally compatible," or "not compatible" within each zone, designated by the identified CNEL ranges.
> - "Compatible" means that the proposed land use is compatible with the CNEL level indicated in the table and may be permitted without any special requirements related to the attenuation of aircraft noise.
> - "Conditionally compatible" means that the proposed land use is compatible if the conditions described in Table IV-1 are met.
> - "Not compatible" means that the proposed land use is incompatible with aircraft noise at the indicated CNEL level.

Noise levels up to 70 dBA CNEL are considered compatible with recreational land uses.

City of Burlingame

Community Safety Element of the Burlingame General Plan. The Noise Element of the General Plan sets forth noise and land use compatibility standards to guide development, and noise goals and policies to protect residents and visitors to Burlingame from excessive noise and disruptive ground vibration. Noise levels up to 70 dBA L_{dn}/CNEL are considered normally acceptable with recreational land uses.

City of Burlingame Municipal Code. The Building Construction Section of the Municipal Code establishes allowable hours of construction in the City of Burlingame. Chapter 18.07.110 states:

"No person shall erect (including excavation and grading), demolish, alter or repair any building or structure other than between the hours of eight a.m. and seven p.m. on weekdays, and nine a.m. and six p.m. on Saturdays, except in circumstances where continuing work beyond legal hours is necessary to building or site integrity, including (but not limited to) large concrete pours, environmental considerations, state or federal requirements, or in cases where it is in the interest of public health and safety, and then only with written approval from the building official, which shall be granted for no longer than necessary to complete the portion of the project for which the exception was granted. No person shall erect (including excavation and grading), demolish, alter or repair any building or structure on Sundays or on holidays, except in the circumstances described earlier in this paragraph, and then only with written approval from the building official, which shall be granted for no longer than necessary to complete the portion of the project for which the exception was granted. For the purpose of this section, holidays are the days set forth in Section 13.04.100 of this code. The restrictions stated in this section shall not apply to work that does not require a permit under any applicable law or regulation, or to work that takes place inside a completely enclosed building and does not exceed the exterior ambient noise level per the BMC 25.58.050.

In the Bayfront Commercial (BFC), Innovative Industrial (I/I) and Rollins Road Mixed Use (RRMU) zones only, construction work may begin at seven a.m. instead of eight a.m. on weekdays. However, the use of chainsaws, jackhammers, pile-drivers or pneumatic impact wrenches shall be prohibited from seven a.m. to eight a.m., unless written approval is granted by the building official pursuant to an exception listed in the above paragraph."

Existing Noise Environment

A noise monitoring survey was performed at the site between Friday, January 21, 2022 and Tuesday, January 25, 2022. The survey included two long-term measurements and two short-term measurements, as shown in Figure 1.

Long-term noise measurement LT-1 was made near the intersection of Airport Boulevard and Bay View Place to represent the noise environment at the proposed park nearest to Airport Boulevard, which is the primary noise source affecting the site. The selected location also represented the noise environment at nearby commercial buildings. The daily trends in noise levels at LT-1 are shown in Figures 2 to 6. During the daytime and evening periods (7:00 am -10:00 pm), hourly average noise levels typically ranged from 56 to 69 dBA L_{eq}. Based on these data, the CNEL noise levels were calculated to range from 63 to 64 dBA.

Long-term noise measurement LT-2 was made near the northeast corner of the site in order to quantify noise levels from aircraft and distant traffic. The daily trends in noise levels at LT-2 are shown in Figures 7 to 11. Daytime and evening hourly average noise levels at LT-2 typically ranged from 52 to 64 dBA L_{eq}, and the CNEL noise levels were calculated to range from 62 to 63 dBA.

Source: Illingworth & Rodkin, Inc., 2022.

Two short-term noise measurements were made to complete the survey. ST-1 was made at the northwest corner of the site to represent ambient noise levels at the project site and the restaurant located to the west. ST-2 was made along Airport Boulevard and documented noise levels primarily due to local traffic. Table 5 summarizes the results of short-term measurements at ST-1 and ST-2.

TABLE 5 Summary of Short-Term Noise Measurements (dBA)

Noise Measurement Location (Date, Time)	L_{max}	$L_{(1)}$	$L_{(10)}$	$L_{(50)}$	$L_{(90)}$	$L_{eq(10\text{-}min)}$
ST-1: Northwest corner of site. (1/25/22, 10:10 am - 10:20 am)	61	59	56	46	45	52
ST-2: Southeast corner of site. (1/25/22, 10:30 am - 10:40 am)	73	66	58	51	45	56

GENERAL PLAN CONSISTENCY ANALYSIS

The Noise Element of the General Plan sets forth noise and land use compatibility standards to guide development, and noise goals and policies to protect residents and visitors to Burlingame from excessive noise. Noise levels up to 70 dBA L_{dn}/CNEL are considered normally acceptable with recreational land uses.

Long-term noise measurements LT-1 and LT-2 quantified existing noise levels throughout the site. The results of these measurements showed that existing CNEL noise levels range from 62 to 64 dBA. The on-site noise measurement data is also consistent with aircraft noise contour data and projections for aircraft noise associated with San Francisco International Airport. Based on a review of the aircraft noise contour maps and the Burlingame General Plan EIR Transportation Noise Contours, future noise levels in the project vicinity are not anticipated to substantially increase above existing levels, nor approach 70 dBA CNEL. Therefore, future noise levels at the project site would be considered by the City of Burlingame to be compatible with the proposed recreational land uses.

NOISE IMPACTS AND MITIGATION MEASURES

This section describes the significance criteria used to evaluate project impacts under CEQA, provides a discussion of each project impact, and presents mitigation measures, where necessary, to reduce project impacts to below the applicable threshold.

Significance Criteria

The following criteria were used to evaluate the significance of environmental noise resulting from the project:

- A significant noise impact would be identified if the project would generate a substantial temporary or permanent noise level increase over ambient noise levels at existing noise-

sensitive receptors surrounding the project site and that would exceed applicable noise standards presented in the General Plan or Municipal Code, or applicable standards of other agencies, at existing noise-sensitive receptors in the site vicinity.

- A significant temporary noise impact would occur if construction noise levels would exceed 100 dBA L_{eq} at commercial land uses near the site.

- A significant permanent noise level increase would occur if: a) the permanent noise level increase is 5 dBA CNEL or greater, with a future noise level of less than the "normally acceptable" standard, or b) the permanent noise level increase is 3 dBA CNEL or greater, with a future noise level equal to or greater than the "normally acceptable" standard.

- A significant operational noise impact would be identified if the project would expose persons to or generate noise levels that would exceed applicable noise standards presented in the General Plan or Municipal Code.

- A significant impact related to vibration would be identified if the construction of the project would generate excessive vibration levels surrounding receptors. Groundborne vibration levels exceeding 0.5 in/sec PPV would have the potential to result in cosmetic damage to conventional buildings.

- A significant noise impact would be identified if the project would expose people residing or working in the project area to excessive aircraft noise levels. Aircraft noise levels exceeding 65 dBA CNEL would be considered excessive.

Impact 1a: **Temporary Construction Noise.** Nearby land uses would be exposed to a temporary increase in ambient noise levels due to project construction activities that would not be considered substantial.

Noise impacts resulting from construction depend upon the noise generated by various pieces of construction equipment, the timing and duration of noise-generating activities, and the distance between construction noise sources and noise-sensitive areas. Construction noise impacts primarily result when construction activities occur during noise-sensitive times of the day (e.g., early morning, evening, or nighttime hours), the construction occurs in areas immediately adjoining noise-sensitive land uses, or when construction lasts over extended periods of time.

The City's Municipal Code typically allows construction to occur in the Bayfront Commercial (BFC) zone between the hours of seven a.m. and seven p.m. on weekdays, and nine a.m. and six p.m. on Saturdays. However, the City of Burlingame does not establish noise level thresholds for construction activities. As an alternative, this analysis uses the noise limits established by the Federal Transit Administration (FTA) to identify the potential for impacts due to substantial temporary construction noise. The FTA identifies construction noise limits in the *Transit Noise and Vibration Impact Assessment Manual*.[4] During daytime hours, an exterior threshold of 100

[4] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, FTA Report No. 0123, September 2018.

dBA L_{eq} shall be enforced at commercial and industrial land uses. Therefore, the temporary construction noise impact would be considered significant if project construction activities produced noise levels 100 dBA L_{eq} at commercial land uses west and south of the site. Construction is not proposed at night.

Construction activities generate considerable amounts of noise, especially during earth-moving activities when heavy equipment is used. The typical range of maximum instantaneous noise levels for the proposed project would be 70 to 90 dBA L_{max} at a distance of 50 feet (see Table 6). Table 6 shows typical hourly average construction-generated noise levels measured at a distance of 50 feet from the center of the site during busy construction periods (e.g., earth moving equipment, impact tools, etc.). As shown in Table 7, construction for typical recreational projects generate noise levels ranging from 77 to 89 dBA L_{eq} at a distance of 50 feet from the center of the active site. Construction-generated noise levels drop off at a rate of about 6 dBA per doubling of the distance between the source and receptor. Shielding by buildings or terrain often results in lower construction noise levels at distant receptors; however, for purposes of assessing a worst-case scenario, construction noise levels in this report are estimated assuming no attenuation due to intervening buildings or structures.

Construction activities for the proposed project would be completed in four phases. Phase 0, which consists of the stockpiling of soil, is expected to start in January 2025 and end by March 2025. Phase 1 of project construction is expected to start in March 2025, followed by Phase 2 starting in February 2026, and Phase 3 starting in June 2027. Construction would be completed by June 2028. During each phase of construction, there would be a different mix of equipment operating, and noise levels would vary by phase and vary within phases, based on the amount of equipment in operation and the location at which the equipment is operating. Equipment expected to be used in each construction phase are summarized in Tables 8 (Phases 0 and 1), 9 (Phase 2), and 10 (Phase 3), along with the quantity of each type of equipment, the reference noise level at 50 feet assuming the operation of the two loudest pieces of construction equipment, and the estimated noise levels at the nearest commercial buildings projected from the center of the construction activity by phase.

The Federal Highway Administration's (FHWA's) Roadway Construction Noise Model (RCNM) was used to calculate the hourly average noise levels anticipated for the worst-case scenario for each construction phase based on the equipment list provided by the applicant at the time of this study. RCNM includes representative sound levels for the most common types of construction equipment and the approximate usage factors of such equipment that were developed based on an extensive database of information gathered during the construction of the Central Artery/Tunnel Project in Boston, Massachusetts (CA/T Project or "Big Dig"). The usage factors represent the percentage of time that the equipment would be operating at full power. The predicted construction noise levels in Tables 8, 9 and 10 indicate that project construction would not generate noise levels exceeding 100 dBA L_{eq} at the nearby commercial uses.

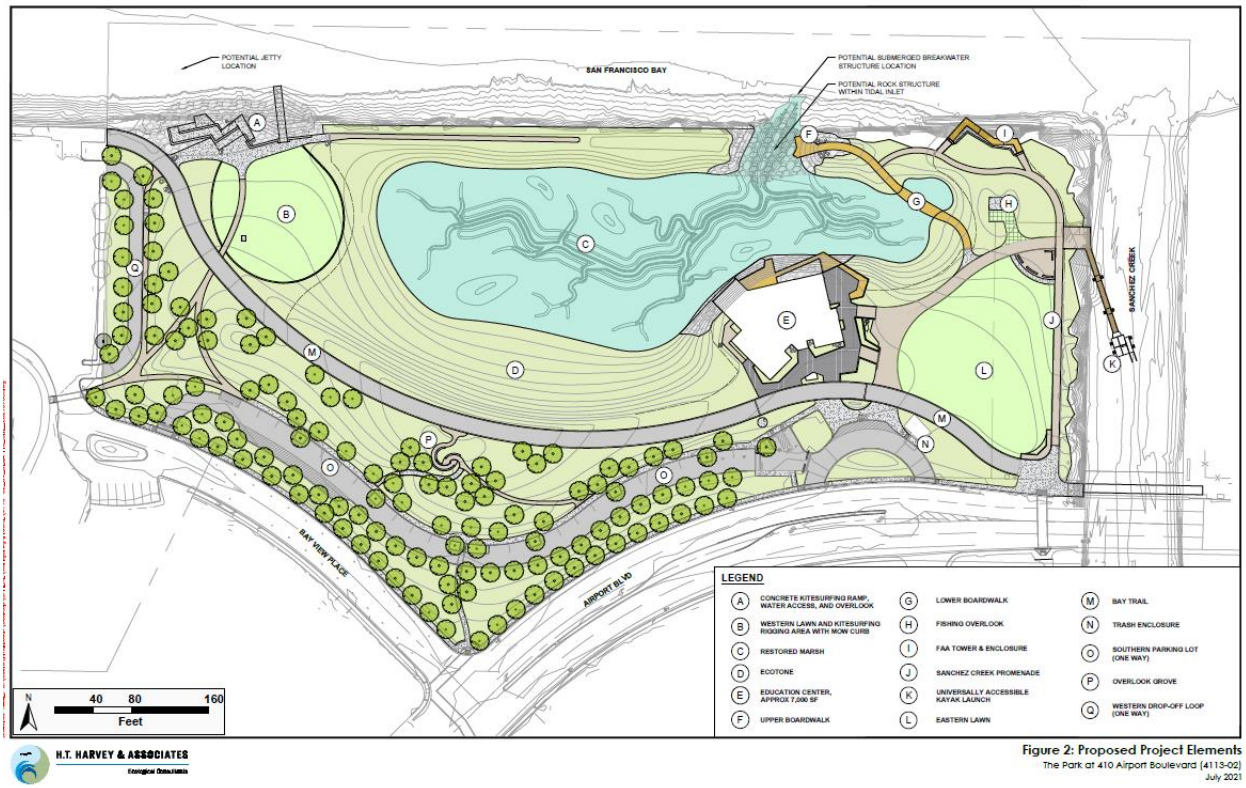
Impact 1b: Permanent Noise Level Increase/Exceed Applicable Standards. The proposed project would not result in a substantial permanent noise level increase or exceed applicable standards at noise-sensitive receptors in the project vicinity.

A significant permanent noise increase would occur if the project would substantially increase noise levels at existing sensitive receptors in the project vicinity. For the purposes of this assessment, a substantial increase is defined as 3 dBA CNEL or more.

The project would improve access for the public to experience a wide variety of recreational activities including fishing, picnicking, playing lawn games, kitesurfing/windsurfing, kayaking/paddle boarding, jogging, bicycling, birdwatching, and attending educational events. Figure 12 shows the proposed project elements.

FIGURE 12 Proposed Project Elements



The vast majority of the recreational uses proposed by the project are considered to be passive uses and are not considered to be substantial generators of noise. Of the proposed uses, events would have the greatest potential for generating community noise. The eastern lawn would provide room for picnicking, lawn games, and a variety of activities and events. Events may include the following:

- Education: school group, community group, speaker series, scientific research
- Recreation: sports competition, group sports lesson, group kayak outing, nature group outing
- Performance: music, theater, movie, art

- Community: farmer's market, food truck hub, craft fair, collectible/antique fair, art/wine festival
- Private: wedding, birthday party, family reunion, faith-based event (e.g., bar mitzvah)
- Corporate/Nonprofit/Government: meeting, conference, banquet

Noise levels from indoor and outdoor events have been documented by Illingworth and Rodkin, Inc. in past projects with up to 300 people in attendance. The event/activity category most similar to proposed events at the education center would be conservatively represented by similar "winetasting/dinner with background music" events measured and observed by our firm. In all cases, indoor activities were not perceivable at the nearest residential property lines and did not affect the measured noise levels in a quiet residential area. Analysis of noise generated during indoor events is not taken further in this assessment.

Outdoor events would be expected to generate noise levels of approximately 57 dBA L_{eq} at a distance of 50 feet from the noise source assuming free-field conditions and no shielding. Worst-case noise levels at the nearest commercial building to the south (240 feet), assuming no intervening shielding, are calculated to be approximately 43 dBA L_{eq}. Noise levels produced by events would be well below ambient daytime traffic noise levels that range from 56 to 69 dBA L_{eq}. Noise produced by small outdoor events would not be measurable or detectable and would not increase CNEL noise levels in the project vicinity (0 dBA CNEL increase).

The project would result in increased vehicle traffic on roadways serving the site. According to the transportation study prepared for the project,[5] "…it is estimated that on a typical day the project would generate 94 daily trips, including one vehicle trip during the AM peak hour and 23 vehicle trips during the PM peak hour. During the occasional use of the education center, the daily trips could be as high as 352 vehicle trips assuming the regular park activities still occurred during educational center events." Existing average daily traffic volumes (ADT) along Airport Boulevard, east of Anza Boulevard are approximately 6,000 trips per day;[6] therefore, the calculated noise level increase due to the additional project traffic during worst-case conditions (i.e., during large outdoor events), would not be measurable or detectable (0 dBA CNEL increase).

Parking would occur at the southern parking lot, which would be accessed from the Airport Boulevard loop west of Sanchez Creek. Noise sources associated with the use of the parking lots would include vehicular circulation, loud engines, door slams, and human voices. The maximum noise level of a passing car at 15 mph typically ranges from 45 to 55 dBA L_{max} at a distance of 100 feet. The noise generated during an engine start is similar. Door slams cause slightly lower noise levels. The hourly average noise levels resulting from all of these noise-generating activities in a busy parking lot typically ranges from 40 to 50 dBA L_{eq} at a distance of 100 feet from the parking area. Noise levels decrease at a rate of 6 dB per doubling of distance. Noise levels resulting from parking activities would be well below ambient noise levels due to traffic along local roadways and aircraft overflights, and the proposed parking lot/parking activities would not measurably contribute to ambient noise levels in the area (0 dBA CNEL increase).

[5] Hexagon Transportation Consultants, Inc., Transportation Study for Proposed Bay Rise Park in Burlingame, California, March 6, 2024.

[6] Hexagon Transportation Consultants, Inc., SFO Technology Center – Transportation Impact Analysis, January 16, 2019.

The operational noise levels produced by the proposed park would be well below ambient noise levels produced by aircraft and local vehicle traffic along Airport Boulevard. The proposed project would not substantially increase the ambient noise environment, nor exceed the noise and land use compatibility thresholds for commercial land uses.

Impact 2: **Exposure to Excessive Groundborne Vibration.** Construction-related vibration levels would not exceed applicable vibration thresholds at nearby buildings.

The construction of the project may generate perceptible vibration when heavy equipment or impact tools are used. Vibration levels would vary depending on soil conditions, construction methods, and equipment used. Table 11 presents typical vibration levels that could be expected from construction equipment at a distance of 25 feet. Project construction activities, such as drilling, the use of jackhammers, rock drills and other high-power or vibratory tools, and rolling stock equipment (tracked vehicles, compactors, etc.), may generate substantial vibration in the immediate vicinity. Jackhammers typically generate vibration levels of 0.035 in/sec PPV, and drilling typically generates vibration levels of 0.09 in/sec PPV at a distance of 25 feet.

The City of Burlingame does not specify a construction vibration limit that should be used to regulate vibration produced by construction equipment. This analysis uses the vibration limits established by the California Department of Transportation (Caltrans) to identify the potential for substantial vibration levels. Caltrans establishes vibration limits of 0.5 in/sec PPV at new residential and modern/commercial structures, 0.3 in/sec PPV at older residential structures, and a conservative limit of 0.25 in/sec PPV at historic and some old buildings (see Table 3). The 0.5 in/sec PPV vibration limit would be applicable at the nearest commercial and office buildings located 75 to 215 feet from the project site.

Using the reference vibration levels at 25 feet, Table 11 also shows the vibration levels calculated at various distances representing nearby buildings. Note that the project may require the use of vibratory pile driving equipment to construct cofferdams from sheet piles, and the installation of the kayak launch's floating gangway and dock would require permanent piles placed with a vibratory hammer, but at no time would this activity occur within 250 feet of the nearest building.

Vibration levels are highest close to the source, and then attenuate with increasing distance at the rate $(D_{ref}/D)^{1.1}$, where D is the distance from the source in feet and D_{ref} is the reference distance of 25 feet. Construction vibration levels due to heavy construction are conservatively calculated to reach 0.063 in/sec PPV at the nearest commercial structure to the southwest, 0.046 in/sec PPV at the nearest commercial structure to the south, and 0.020 in/sec PPV at the nearest commercial structure to the west when construction is located along the project boundaries nearest to each receptor. Vibration levels due to pile driving are conservatively calculated to reach 0.058 in/sec PPV at the nearest commercial structure to the south.

As indicated in Table 11, worst-case project-generated vibration levels would be less than the 0.50 in/sec PPV threshold used to avoid "architectural" damage at all commercial structures in the project vicinity. At these locations and in other surrounding areas where vibration would not be expected to cause damage, vibration levels may still be perceptible. However, as with any type of

construction, this would be anticipated given the intermittent and short duration of the phases that have the highest potential of producing vibration.

TABLE 11 Construction Equipment Vibration Levels

Equipment		Ref PPV (25 ft)	Vibration Levels at Nearest Buildings (in/sec PPV)			
			Southwest (75 ft)	South (100 ft)	West (215 ft)	South (250 ft)
Pile Driver (Sonic)	upper range	0.734	--	--	--	0.058 [a]
	typical	0.17	--	--	--	0.014 [a]

Source: Transit Noise and Vibration Impact Assessment Manual, Federal Transit Administration, Office of Planning and Environment, U.S. Department of Transportation, FTA Report No. 0123, September 2018, as modified by Illingworth & Rodkin, Inc., August 2024.

Note a: Vibratory pile driving would occur at the kayak launch no closer than 250 feet from the nearest building.

Impact 3 Exposure to Excessive Aircraft Noise. The project would be located in a compatible noise environment with respect to aircraft noise levels affecting the site.

San Francisco International Airport is a public-use airport located approximately 1.5 miles northwest of the project site. Based on the results of the noise monitoring survey (see Setting Section), aircraft-related noise is distinctly noticeable at the project site; however, the project site lies outside the 65 dBA CNEL noise contour shown in the Comprehensive Airport Land Use Compatibility Plan for the Environs of San Francisco International Airport[7] (see Figure 13) and the 65 dBA CNEL noise contour shown in the San Francisco International Airport 14 CFR Part 150 Study[8] (see Figure 14). Aircraft noise levels less than 70 dBA CNEL would be considered compatible at exterior use areas and within buildings proposed by the project.

Memorandum

Date: March 6, 2024

To: Will Johnson, The SPHERE Institute

From: Gary K. Black, Nivedha Baskarapandian

Subject: Transportation Study for the Proposed Bay Rise Park in Burlingame, California

Introduction

Hexagon Transportation Consultants, Inc. has completed a transportation study for the proposed Bay Rise Park in Burlingame, California. The project site is located east of US-101 between Bay View Place and Anza Boulevard (see Figure 1). The existing site is currently vacant, and the project would develop a park that includes passive uses such as picnicking/trails, an 8,950 square-foot education/event center, and a launch point for canoeing and windsurfing (see Figure 2). A 30-stall parking lot would be provided with access from Airport Boulevard and an additional outbound-only driveway on Bay View Place.

CEQA Analysis

The City of Burlingame has not yet adopted any analysis methodology or significance thresholds related to VMT. Thus, the VMT thresholds used for this project are based on the Governor's Office of Planning and Research (OPR)'s recommendations and San Mateo County VMT policy guidelines.

San Mateo County VMT policy guidelines specify procedures for determining project impacts on VMT based on the project description, characteristics, and location. The VMT methodology also includes screening criteria that are used to identify types, characteristics, and locations of projects that would not exceed the VMT thresholds of significance. If a project or a component of a mixed-use project meets the screening criteria, it is then presumed that the project or the component would result in a less-than-significant VMT impact.

Screening for VMT Analysis

Land use projects that meet at least one of the following screening criteria are presumed to have a less than significant impact on VMT:

(1) located in a transit priority area (TPA): within ½ mile of a high-quality transit stop / rail station
(2) affordable housing
(3) small projects generating 110 or fewer daily vehicle trips
(4) existing low VMT area
(5) local serving retail (<50,000 s.f.)

The proposed park would be a local serving facility and would generate fewer than 110 daily vehicle trips and therefore is expected to have a less than significant VMT impact.

Figure 2
Project Site Plan

NORTH
Not to Scale

Non-CEQA Analysis

The site access, parking, circulation evaluation, and bicycle, pedestrian, and transit facilities are discussed below.

Through empirical research, data have been collected that show trip generation rates for many types of land uses. The data are published in the Institute of Transportation Engineers' (ITE) Trip Generation online database. The magnitude of traffic added to the roadway system by a development is estimated by multiplying the applicable trip generation rates by the size of the development. The trip generation rates published for "Public Park" (Land Use Code 411) and "Recreational Community Center" (Land Use Code 495) were applied to the 9.4 acres of proposed park and educational center, respectively. Public Park land uses can include a number of facilities including boating, swimming, beaches, hiking trails, ball fields, soccer fields, campsites, and picnic facilities. Recreational Community Center land use is a public facility that can include classes and clubs, day care or nursery school, meeting rooms, social facilities, outdoor athletic fields/courts, exercise classes, and a restaurant/snack bar. This was used to estimate the educational center trips as the center would be used for social activities and classes/programs.

After applying the applicable trip rates, it is estimated that on a typical day the project would generate 94 daily trips, including one vehicle trip during the AM peak hour and 23 vehicle trips during the PM peak hour. During the occasional use of the education center, the daily trips could be as high as 352 vehicle trips assuming the regular park activities still occurred during educational center events.

Table 1
Trip Generation Summary

Land Use	Size	Units	Daily Trips	AM Peak-Hour Trips In	AM Peak-Hour Trips Out	AM Peak-Hour Trips Total	PM Peak-Hour Trips In	PM Peak-Hour Trips Out	PM Peak-Hour Trips Total
Proposed									
Park [1]	9.4	acres	94	1	0	1	13	10	23
Educational Center [2]	8,950.0	s.f.	258	12	6	18	18	14	32
Total Project Trips			***352***	***13***	***6***	***19***	***31***	***24***	***55***

Notes:
[1] Park trip generation is based on the rates and fitted curve equations published in the ITE Trip Generation online database for Public Park (Land Use Code 411).
[2] Educational center trip generation is based on the PM peak-hour rate published in the ITE Trip Generation online database for Recreational Community Center (Land Use Code 495).

Airport Boulevard Forecast Volumes

Existing volumes on Airport Boulevard between the channel and just west of Bay View Place were counted on Saturday, February 10, 2024 and Tuesday, February 13, 2024. Project trips were added to the existing volumes and were projected to 2040. Year 2040 volumes were taken from the City/County Association of Governments (C/CAG) travel demand model based on the existing volumes. The counts are attached as Attachment 1 and summarized below.

Table 2
Airport Boulevard Volumes

Location [1]	Existing		Existing + Project [2]		Year 2040 [3]		Year 2040 + Project [2]	
	Weekday	Weekend	Weekday	Weekend	Weekday	Weekend	Weekday	Weekend
West of Channel	4,648	2,669	5,000	3,021	7,512	4,314	7,864	4,666
West of Bay View Place	4,740	2,717	5,092	3,069	7,604	4,359	7,956	4,711

Notes:
[1] Existing volumes were collected Saturday, February 10, 2024 and Tuesday, February 13, 2024 on Airport Boulevard at two locations.
[2] Project volumes assume an event at the educational center regualar park facilities.
[3] Existing weekday volumes were projected to year 2040 per the C/CAG model. Year 2040 weekend volumes were estimated based on existing volumes.

Site Access and Circulation

The site access and on-site circulation evaluation is based on the site plan dated February 2024 (see Figure 2). Site access was evaluated to determine the adequacy of the site's driveways with regard to the following: traffic volume, vehicle queues, geometric design, and stopping sight distance. On-site vehicular circulation and parking layout were reviewed in accordance with generally accepted traffic engineering standards and transportation planning principles.

Site Access and Project Driveway Operations

The site plan shows that vehicular access to the project would be provided by a new driveway located on Airport Boulevard. The estimated gross site vehicle trips are 19 vehicle trips (13 inbound and six outbound)during the AM peak hour and 55 vehicle trips (31 inbound and 24 outbound) during the PM peak hour when there would be events at the educational center. This equates to approximately one vehicle entering or exiting every two to three minutes during the AM and PM peak hour. According to the Burlingame Municipal Code Section 25.40.070(C)(2), the minimum driveway width for parking areas with 1 to 30 vehicle spaces should be a minimum of 12 feet and according to Table 25.40-2, parking stalls between 30 and 60 degrees should have an aisle width of 13 feet for one way traffic. As shown on the site plan, the project driveways on Airport Boulevard and Bay View Place would be 24 and 20 feet wide respectively and the parking aisle would have a width of 14 feet. Both project driveways and parking aisle show adequate widths and meet the requirements. The circular driveway at the entrance would serve as a loading and unloading area for park visitors. The project proposes to stripe a left turn pocket on Airport Boulevard to facilitate left turns into the park. Due to the relatively low number of project-generated trips at the driveways, operational issues related to vehicle queuing and/or vehicle delay are not expected to occur.

Sight Distance

Sight distance was checked for the project driveways. Sight distance recommendations vary depending on the roadway speeds. The posted speed limit on Airport Boulevard is 35 mph. There is no posted speed limit on Bay View Place. The Caltrans recommended stopping sight distance for the project driveways is 250 feet (based on a design speed of 35 mph). The project driveways have sight distances of over 300 feet in both directions, which meets the requirement.

Proposed Parking and On-Site Circulation

The project proposes 30 diagonal parking spaces along the road through the site. Two of the parking spaces would be reserved for buses. The bus turning movements are shown in Figure 3.

The surface parking lot and project site services show acceptable connectivity and maneuvering. Hexagon previously prepared a parking study that goes into detail about parking based on the anticipated park and facility usages. The parking study is provided as Attachment 2.

Loading and Emergency Vehicle Access

It is assumed that the circular driveway on Airport Boulevard would serve as a loading area for delivery vehicles, garbage trucks, and emergency vehicles. A trash enclosure is located near the outbound driveway on Airport Boulevard which would serve as the loading area for garbage trucks. Figure 4 shows the turning movements for an emergency vehicle. The project site plan shows acceptable maneuvering space for loading and emergency vehicles.

Bicycle Parking

According to the Burlingame Municipal Code Section 25.40.050(A), bicycle parking shall be provided in accordance with the requirements of the *CalGreen Building Standards Code*. The Cal Green Building Standards states that if the new project is anticipated to generate visitor traffic, the project must provide permanently anchored bicycle racks within 200 feet of the entrance for 5 percent of parking spaces with a minimum of one two-bike capacity rack. The project proposes 28 passenger car parking spaces and would therefore be required to provide two bicycle parking spaces. The project site plan shows four bicycle parking spaces at the lower left corner of the educational center, which meets the requirements.

Pedestrian Access and Circulation

Pedestrian facilities in the immediate vicinity of the project site include continuous sidewalks on both sides of Airport Boulevard and Bay View Place. There are marked crosswalks across Airport Boulevard on the west leg of the intersection of Bay View Place and Airport Boulevard and a midblock crosswalk across Airport Boulevard to the right of the channel. The project proposes a new midblock crosswalk across Airport Boulevard to the left of the channel. This crosswalk would connect with the Bay Trail and other trails on the project site.

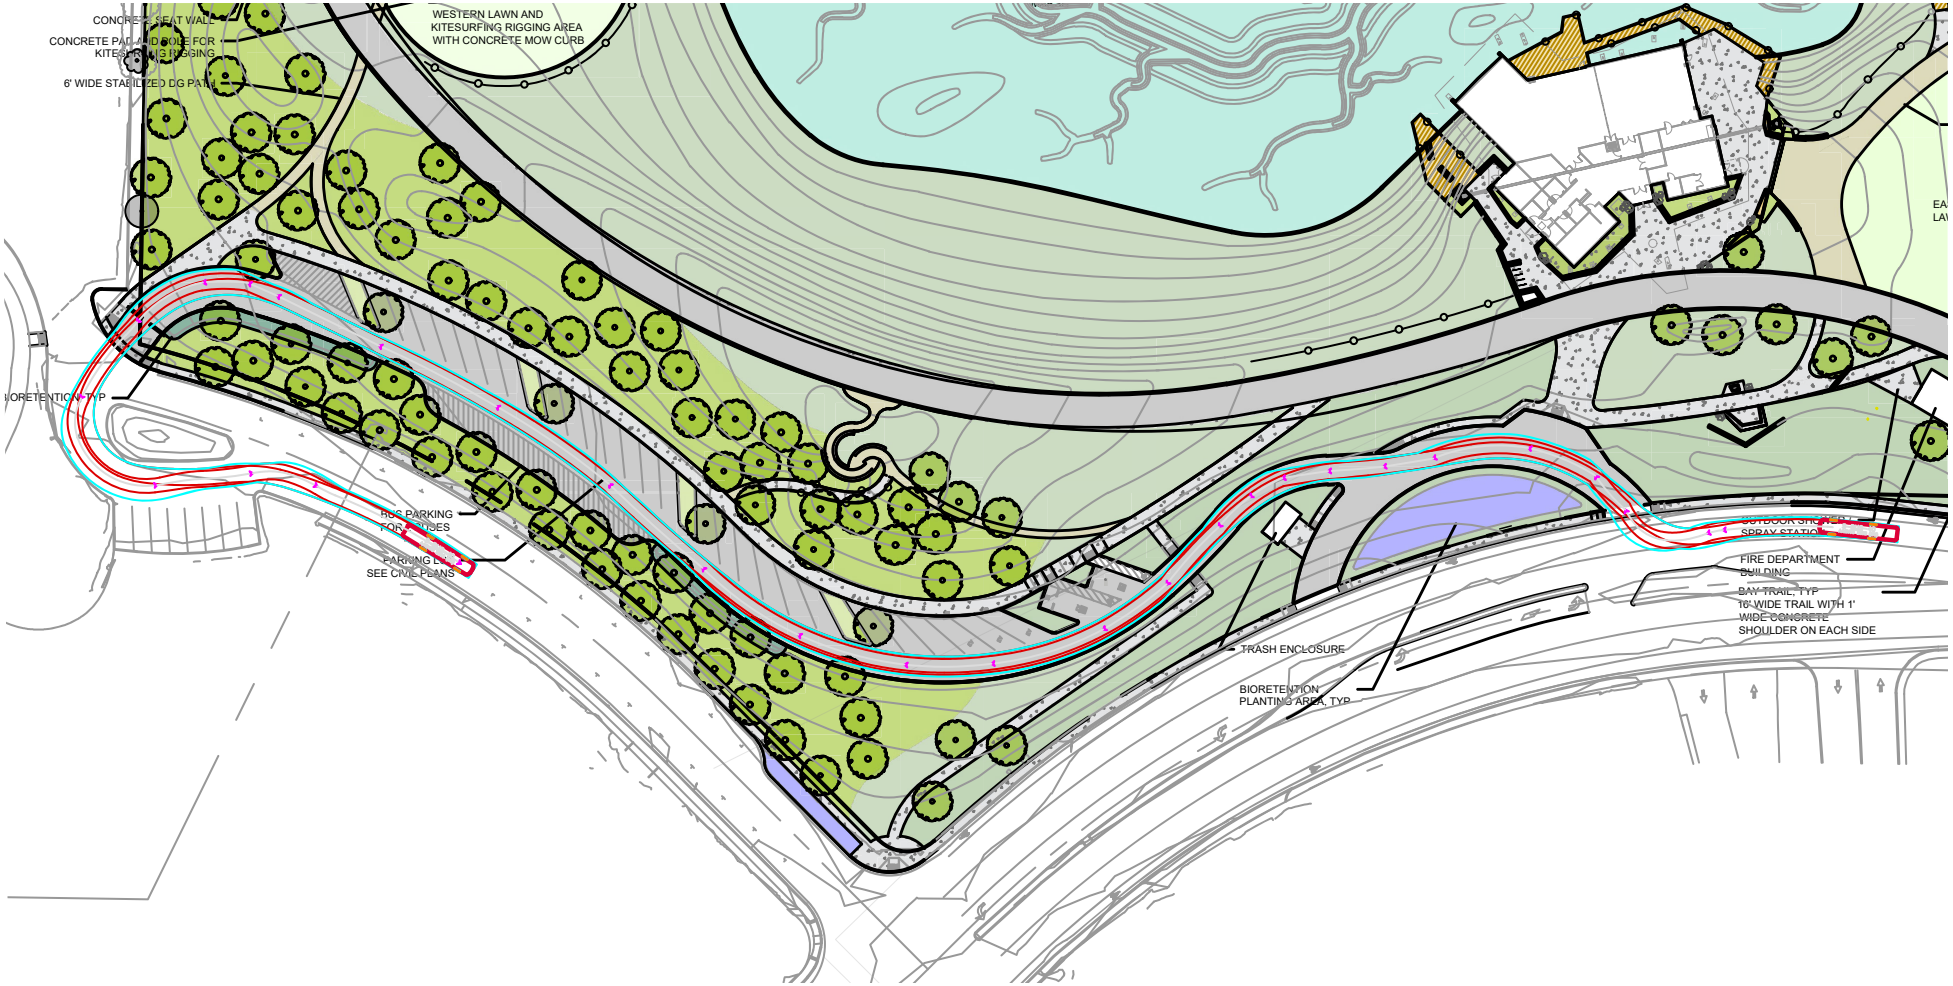

Figure 3
Bus Site Circulation

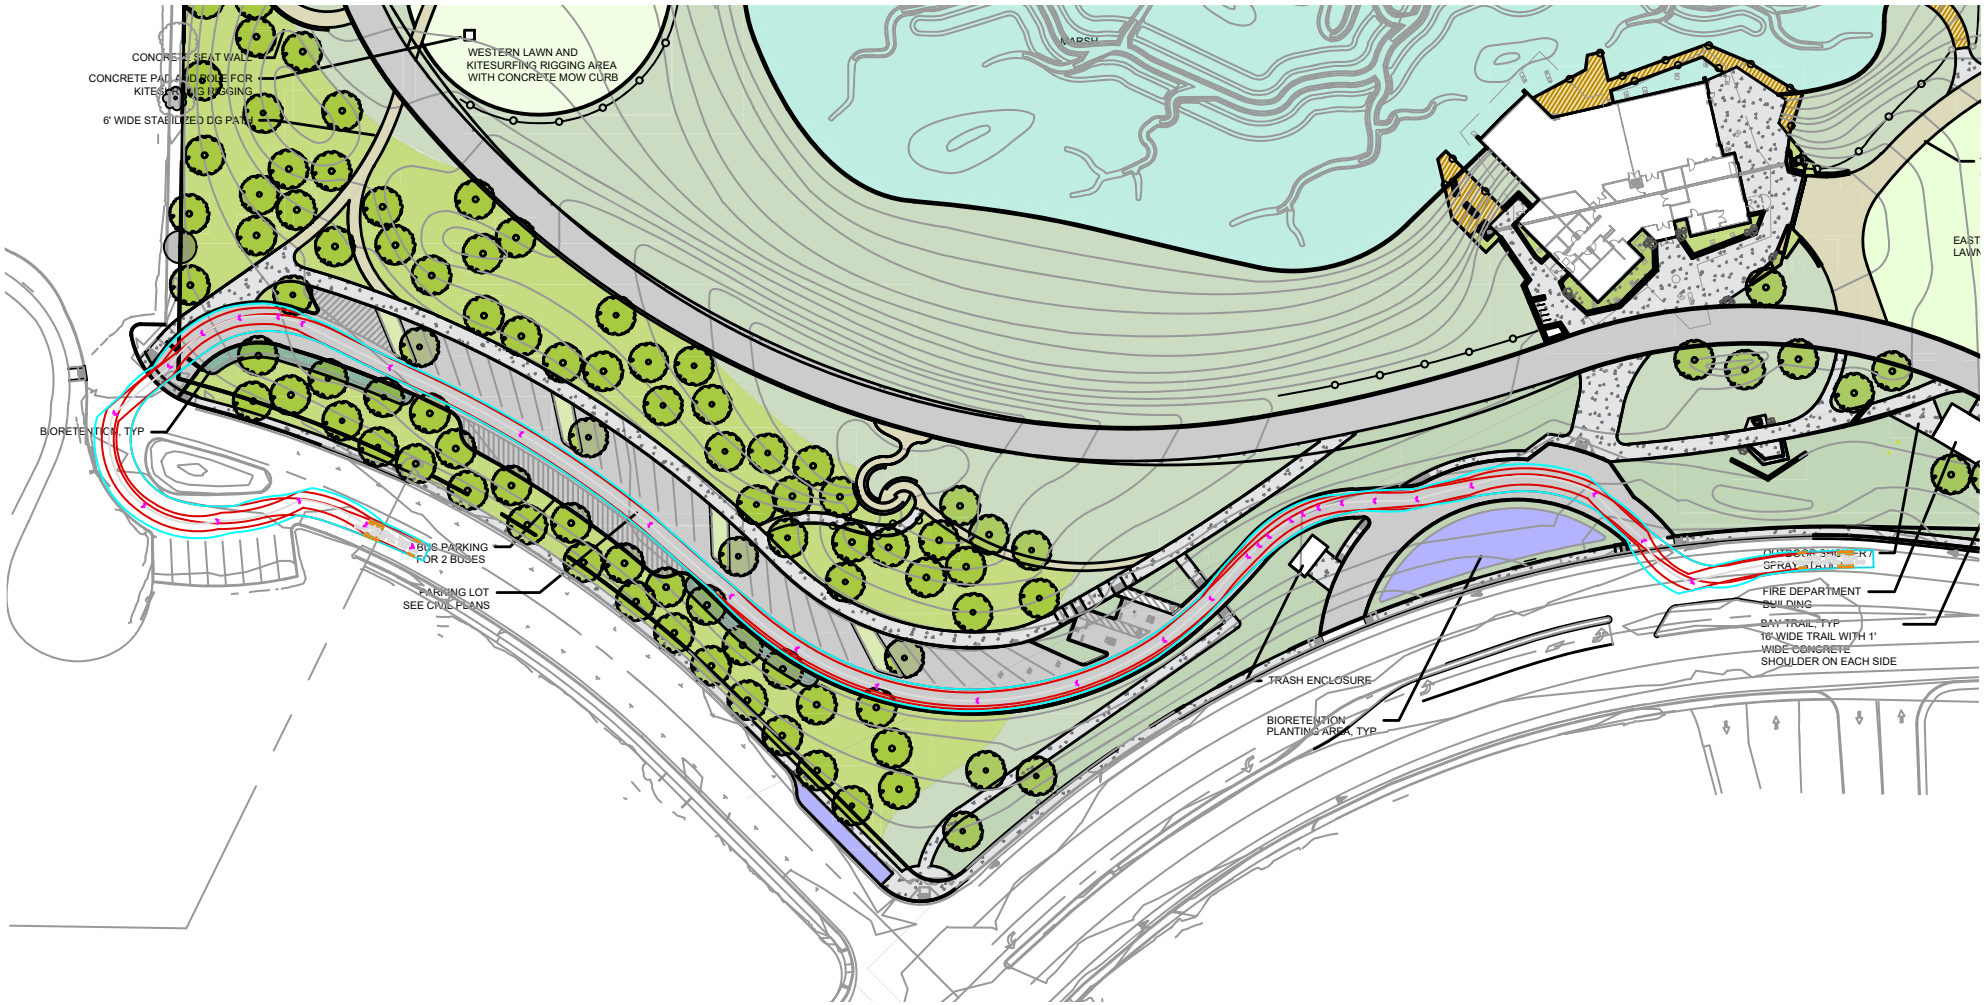

Figure 4
Firetruck Site Circulation

NORTH
Not to Scale

Bicycle Access and Circulation

Existing bike facilities in the vicinity of the project site include Class I bike paths parallel to Anza Boulevard, Bayside Crossing, and along the waterfronts, Class II bike lanes on Airport Boulevard, and a Class III bike route on Airport Boulevard at the Burlingame Dog Exercise Park. Proposed bike facilities include a Class I bike path at the upper right corner of the island, Class II buffered bike lanes on Old Bayshore Highway, a Class III bike route through Bayside Park, and Class IV separated bikeway along Airport Boulevard. The existing and proposed bike facilities are shown in Figure 5.

The project would provide short-term bicycle parking spaces on-site. The short-term bicycle racks would be located at the lower left corner of the educational center, and each could accommodate four bikes. All bicycle parking spaces would be accessible from the project driveway and trails.

Transit Services in the Project Vicinity

Transit service in the vicinity of the project site is provided by Commute.org's Burlingame Point Shuttle (BPT). The BPT shuttle provides service between the Millbrae BART/Caltrain station and Meta Reality Labs at Burlingame Point, with stops along Airport Boulevard. Service is available Monday through Friday during the AM and PM commute hours and is free to the public. Access to and from the bus stop from the project site is provided by sidewalks on Airport Boulevard and Bay View Place.

Conclusions

The purpose of this transportation study is to satisfy the CEQA and non-CEQA requirements for new development projects. The results of the study are summarized below.

- The proposed project would meet the screening criteria for a local serving facility and small project; therefore, the proposed project is expected to have a less than significant VMT impact.
- The proposed project is estimated to generate 94 daily trips on typical days and up to 352 daily vehicle trips with events at the educational center.
- The site plan layout shows adequate access, circulation, and parking for loading, emergency, and visitors.

Attachment 2
Parking Study

Hexagon Transportation Consultants, Inc.

Memorandum

Date: July 27, 2021

To: Mr. Will Johnson, Sphere Institute

From: Gary Black
Selvi Sivaraj

Subject: Parking Analysis for the Development of the Park at 410 Airport Boulevard in Burlingame, California

Hexagon Transportation Consultants, Inc. has completed this parking analysis for the proposed development of the Park at 410 Airport Boulevard in Burlingame, California (see Figure 1). The project will convert a vacant 9.4-acre parcel on the Burlingame waterfront into a public park focused on environmental education related to sea level rise and climate change. The Park will include a kayak launch, a kitesurfing/windsurfing launch, tidal wetland and upland habitat restoration, a new education center building including a small takeout Café, raised boardwalks and overlooks, interpretive stations, lawns, and trails including an extension of the Bay Trail (see Figure 2). The educational center building, totaling approximately 8,000 square feet, will comprise a kitchen, lobby, storage area, and approximately 4,450 square feet of interior gallery area. The educational center will also include outdoor space of approximately 4,500 square feet. This memorandum estimates the parking demand generated by the public park with and without an event at the education center.

Parking Analysis Based on Published Sources

Institute of Transportation Engineers (ITE) manual is a compendium of parking demand research for various types of land uses. We utilized the land use category entitled Public Park for the park portion of the project and Convention Center (Land Use 595) for the education center. A convention center is a facility that provides space for conventions, trade shows, consumer shows, meetings, and special events. The peak period for parking demand at a convention center is closely tied to the specific event being hosted and its attendees. The café located within the education center will not have a dining area and would only sell over the counter take-way food. It is expected that the majority of the Café customers would be Bay Trail users and employees from adjacent office buildings, who will either bike or walk. Therefore, the Café does not induce any additional parking demand.

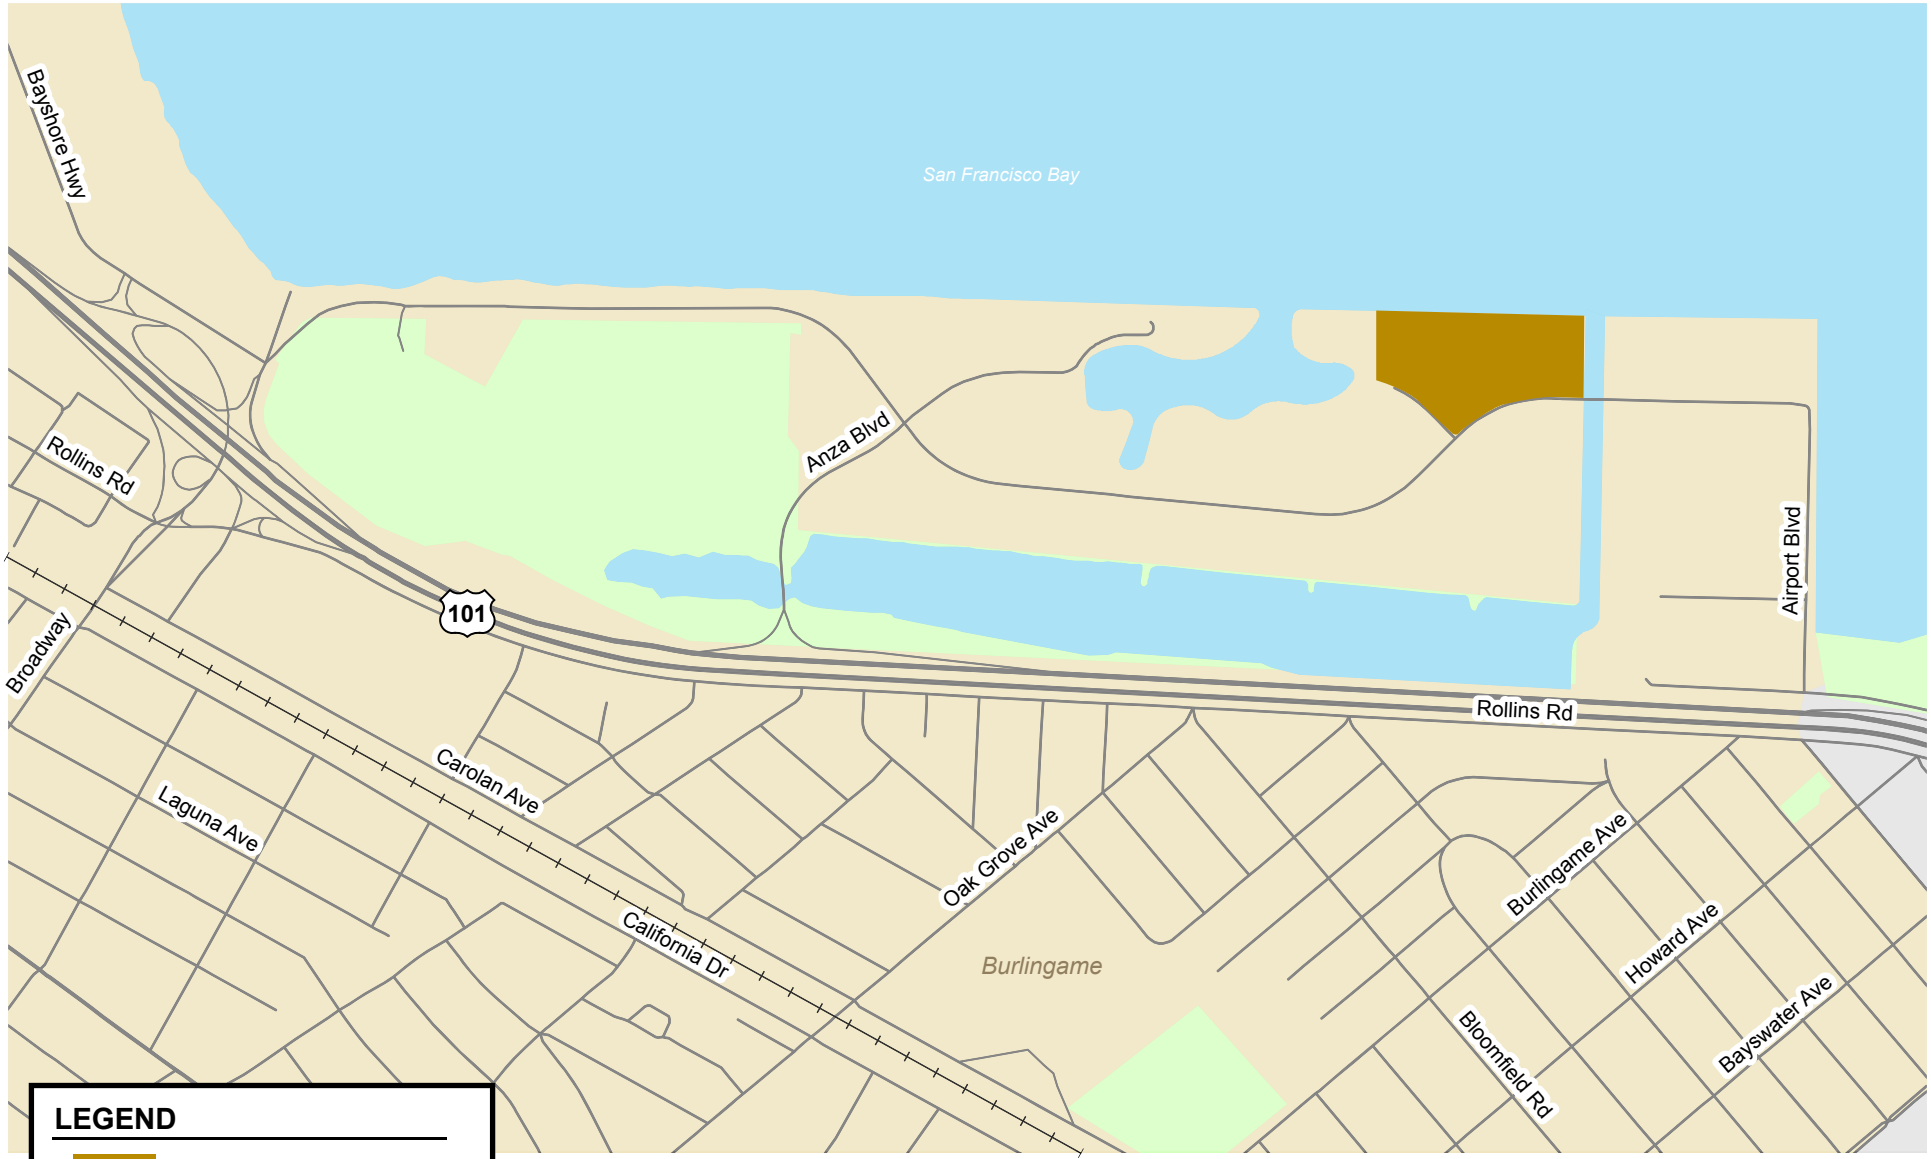

Figure 1
Site Location

Figure 2
Site Plan

NORTH
Not to Scale

For the park, according to the ITE's Parking Generation Manual, 5th Edition, 2019, Public Parks (Land Use 411) have a typical 85th percentile maximum demand of 5.08 spaces per acre, and Convention Centers (Land Use 595) have a typical maximum demand of 0.40 space per attendee. The park would comprise approximately 9.4 acres of park area including 4,450 s.f. of indoor gallery space and 4,500 s.f. of outdoor space in the education center. Based on the project information from the client, the interior gallery area and outdoor patios in the education center could accommodate up to 220 attendees. The Park may also host outdoor events such as craft fairs, farmers' markets, and kitesurfing tournaments with up to 300 attendees. Therefore, according to the ITE Parking Generation manual, the proposed project would generate a typical maximum parking demand of 48 (9.4x5.08) parking stalls for the park and 88 parking stalls (220x0.4) for the education center. For large outdoor events with up to 300 attendees, up to 120 parking spaces would be needed.

Shared Parking, published by the Urban Land Institute, is another source for parking demand data. According to the Urban Land Institute (ULI) Shared Parking 3rd Edition, 2020, Public Parks require a parking ratio of 5 spaces/acre for visitors and 0.5 spaces/acre for employees. Education Centers require 6.0 spaces per 1,000 s.f. Therefore, based on ULI rates, the proposed project would require 52 (9.4x5.5) parking stalls for the park and 54 parking stalls (8.95x6) for the education center separately. Because the parking would be shared, the ULI Shared Parking data indicates that the project would require only 99 parking spaces instead of 106 spaces.

Parking Counts

As another measure of the possible parking demand for the proposed Park at 410 Airport Boulevard, Hexagon conducted parking occupancy counts at three comparable parks to determine the parking demand generated by the public parks. Although the Park at 410 Airport Boulevard proposes to include a Café, it would only sell over the counter take-away food and does not require additional parking spaces. Parking counts at all the park parking lots were conducted on Saturday, August 15th and August 22nd, 2020. The number of parked vehicles was counted every 30 minutes from 9:00 AM to 4:00 PM on each day (see Appendix A). The parking counts were conducted at the following parks.

1. Heron's Head Park, San Francisco

   Heron's Head Park is approximately 22-acre open space and wildlife habitat located in the City of San Francisco Southeast Sector. Park amenities include 3,200 s.f. of ecology center, rest rooms, dog run, fishing pier, picnic areas with 9 tables, walking trails adjacent to the Bay trail, Shoreline habitat restoration and 24 parking spaces (including 4 ADA spaces).

2. Hal Brown Park at Creekside, Corte Madera

   Hal Brown Park is an approximately 27-acre park with habitat restoration. Park amenities include an overlook/pavilion, rest rooms, picnic areas with 12 tables, children's play area, boardwalks, walking trails and 27 on-street parking spaces (including 2 ADA spaces).

3. Cooley Landing, East Palo Alto

   Cooling Landing is an approximately 15-acre park with habitat restoration in East Palo Alto. The park amenities include an overlook/pavilion, rest rooms, picnic areas, walking/bike trails and 30 parking spaces (including 2 ADA spaces). This park also includes an overflow parking lot with 13 spaces.

The ecology center or overlook/pavilion buildings in all the parks were closed during the count days due to COVID-19. Average parking rates were calculated for all the three parks based the park size

and parking demand generated by the parks (see Table 1). Based on the calculation, the average parking rate for Heron's Head Park was 0.64 parking space per acre, Hal Brown Park was 0.76 parking space per acre, and Cooley Landing Park was 1.07 parking spaces per acre. The overall average parking ratio was found to be 0.82 parking space per acre.

The parking rates for the comparable parks were substantially less than the ITE parking rate for Public Park. The public parks counted for the ITE data vary widely as to location, type, and number of facilities, including boating or swimming facilities, beaches, hiking trails, ball fields, soccer fields, campsites, and picnic facilities. The comparable parks that were counted included picnic areas and walking trails only. The pavilions were closed. Since the proposed Park is more like the three comparable parks that were counted, as opposed to the ITE parks, Hexagon believes that the average parking ratio from the three comparable parks should be used to estimate the parking demand for the Park at 410 Airport Boulevard.

Table 1
Parking Count Results

Park Name/Location	Size (Acre)	Occupied Parking Spaces		Parking Rate		
		8/15/2020	8/22/2020	8/15/2020	8/22/2020	Average Rate
Heron's Head Park	22	14	14	0.64	0.64	0.64
Hal Brown at Creekside	27	17	24	0.63	0.89	0.76
Cooley Landing	15	17	15	1.13	1.00	1.07
					Averge Parking Rate	**0.82**

Notes:
[1] The number of parked vehicles was counted every 30 minutes from 9:00 AM to 4:00 PM on each day.

A windsurfing launch point is not available at the three parks that were counted. In order to quantify the parking demand for the windsurfing launch facility, a parking occupancy count was conducted at the nearby windsurfing launch point at Coyote Point Park in San Mateo. The number of parked vehicles observed to be associated with windsurfing were counted every 30 minutes from 9:00 AM to 4:00 PM on Saturday, August 15th and September 5th, 2020 (see Appendix A).

Bold indicates peak parking demand

Based on the parking occupancy counts, the maximum parking demand generated by the windsurfing facility was found to be 23 parking spaces.

Parking Demand and Supply Estimate

The total projected peak parking demand at the proposed park is estimated to be 31 spaces without an event. This comprises 8 spaces for the park and café based on the average of the counts at comparable parks and 23 spaces for windsurfing/kitesurfing based on the Coyote Point count. Since the Park is so close to Coyote Point, it might not occur that both locations would need over 20 spaces for windsurfing/kitesurfing. For events at the education center or for large outdoor events with attendance up to 300 persons, the park would need 120 parking spaces based on ITE rates.

The proposed park facility is planning to provide 25 on-site parking spaces (21 standard and 2 Electric Vehicle (EV), 1 EV ADA and 1 ADA). Based on the counts done for this report, that is ample for normal day-to-day park operations, but does not appear to be sufficient when conditions are good for windsurfing/kitesurfing.

Currently Bay View Place is signed for no parking although it is wide enough to allow on-street parking on both sides. Perhaps the parking restriction is so that transients don't take up residence there given that it is undeveloped. However, this could be a valuable parking resource for the Park. It is estimated that 23 on-street spaces would fit on Bay View Place. In addition, there is a small

public parking lot with 8 spaces at the end of Bay View Place, which is just opposite to the proposed park. Thus, there could be up to 56 public parking spaces available at the park or immediately adjacent.

Parking for large events that would need more than 56 parking spaces could be offsite, potentially with valet/shuttle service to and from the park. The following public parking facilities are located in the immediate vicinity (1/4 mile) of the project site.

- 4 public shore parking spaces at 411 Airport Boulevard, which is approximately 350 feet walking distance from the project site.
- 19 public shore parking spaces at Embassy Suites, which is approximately 1,350 feet walking distance from the project site.
- 46 parking stalls (approximately) at Anza's Fisherman Park with, which is approximately 1,200 feet walking distance from the project site.
- 35 public parking stalls including 15 parking stalls along Airport Boulevard and 20 public shore parking stalls under construction at the Burlingame Point site, which are located within 1/4 mile of the project site.
- 56 on-street parking spaces including 42 on-street parking spaces on Beach Road and 14 on-street parking spaces on Airport Boulevard, which are located within 1/4 mile of the project site.
- 10 public shore spaces along the Sanchez Lagoon, which are located within 1/4 mile of the project site.

In addition, the following private/office parking facilities are located in the immediate vicinity (1/2 mile) of the project site that have large parking lots, potentially to lease for special events.

- 500 Airport Boulevard (The SPHERE Institute Office)
- 600 Airport Boulevard
- 433-577 Airport Boulevard
- 300 Airport Boulevard (New Facebook campus – under construction)
- 60 Bay View Place (Kincaid's Fish, Chop & Steakhouse Restaurant)
- 150 Anza Boulevard (Embassy Suites by Hilton)
- 700 Airport Boulevard (Unident Laboratories)
- 111 Anza Boulevard (Seabreeze Plaza).

Summary

Parking demand for the park includes:

- 8 spaces for day-to-day park use including the café
- Up to 23 spaces for windsurfing/kitesurfing based on the Coyote Point count
- Up to 88 spaces for the education center for full occupancy with 220 attendees, which could be offsite/valet/shuttle
- Up to 120 spaces for the outdoor recreation or market events that could accommodate up to 300 attendees, which could be offsite/valet/shuttle

The project currently anticipates having the following parking supply:

Table 3
Parking Supply

Location	No. of Parking Spaces
Onsite	25 spaces (21 standard, 2 EV, 1 EV ADA and 1 ADA)
Onstreet	8 parking stalls at end of Bay View Place + 23 spaces on Bay View Place (to be coordinated with the City)
Offsite - Public (within 1/4 mile)	170 spaces
Offsite - Private (within 1/4 mile)	To be negotiated
